Ninyo & Moore
Geotechnical and Environmental Sciences Consultants

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
2330 WEBSTER STREET AND 2315 VALDEZ STREET
OAKLAND, CALIFORNIA

PREPARED FOR:
Mr. Gopal Nair, Environmental Program Specialist
City of Oakland, Public Works
Department of Environmental Sciences Division
250 Frank Ogawa Plaza, Suite 5301
Oakland, California 94612

PREPARED BY:
Ninyo & Moore
Geotechnical and Environmental Sciences Consultants

Oakland, California 94612

January 11, 2010
Project No. 401496019

January 11, 2010
Project No. 401496019

Mr. Mark Arniola, Environmental Program Specialist
City of Oakland, Public Works
Department of Environmental Sciences Division
250 Frank Ogawa Plaza, Suite 5301
Oakland, California 94612

Subject: Phase I Environmental Site Assessment Report
2330 Webster Street and 2315 Valdez Street
Oakland, California

Dear Mr. Arniola:

In general accordance with the scope of services outlined in the proposal prepared by Ninyo & Moore on December 9, 2009, Ninyo & Moore has performed a Phase I Environmental Site Assessment of the above-referenced site. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site. We appreciate the opportunity to be of service to you on this project.

Sincerely,
NINYO & MOORE

Nicholas Roy
Senior Staff Environmental Scientist

Kris M. Larson, P.G. 8059
Senior Environmental Geologist

NSR/KML/csj

Distribution: (2) Addressee (2 hard copies and 1 electronic copy on CD)

EXECUTIVE SUMMARY

Ninyo & Moore was retained by the City of Oakland Public Works Agency (City) to perform a Phase I Environmental Site Assessment on the properties located at 2300 Webster Street and 2315 Valdez Street in Oakland, California. The site is approximately 62,870 square feet in size. It is our understanding that the City would redevelop the site if purchased. In general, the following items were noted:

- The site is currently in use as a paved parking lot. It is surrounded by a chain link fence with several openings for pedestrian access. The site contains one small structure, a parking kiosk, located adjacent to a driveway on the Webster Street side of the property near the northeast corner of the site. The earliest historical records reviewed indicated residential development at the site as early as 1889, and commercial and industrial use as early as 1950. Commercial uses included an auto supply store and warehouse, machine shops, a gas station, and a labor meeting lodge for several labor unions. Between approximately 1950 and 1970 several of the buildings were demolished, and the site ultimately became completely paved and utilized as a parking lot. Adjacent properties historically included auto body shop and repair facilities, parking garages, and machine shops.

- A historical record search was conducted for both the site and surrounding areas. This review included a review of aerial photographs, city directories, fire insurance maps, and topographic maps. Records were requested or reviewed for the following agencies: the San Francisco Bay Regional Water Quality Control Board (RWQCB), Department of Toxic Substances Control, Alameda County Environmental Health Services Agency (ACEHSA), City of Oakland Building Department, and City of Oakland Fire Department. The relevant files needed to complete this report were located within the RWQCB Geotracker online database.

- Environmental Documents reviewed for the site included a Phase I ESA prepared in August 2004, and several letters from the Alameda County Environmental Health Services Agency (ACEHSA). The August 2004 Phase I reported that a subsurface investigation was conducted in November 1995 which consisted of an electromagnetic survey of the property and the installation of 18 borings for soil and groundwater sample collection. Volatile organic compounds (specifically 1,2-dichlorobenzene) were detected in samples collected from the northern section of the site. Additional investigations and samples collected from groundwater monitoring wells installed on site reported carbon tetrachloride, 1,1-dichloroethene, 1,4-dichlorobenzene, toluene, and total petroleum hydrocarbons as gasoline impacting the site groundwater. The electromagnetic survey identified a 60 ft x 110 ft buried object in the southeastern section of the site, and two buried pipes in the center of the property.

- A “No Further Action” letter was prepared by the ACEHSA and in conjunction with the San Francisco Bay Regional Water Quality Control Board (RWQCB) in October 1996 after reviewing a request for case closure and related risk assessment prepared in July 2006. The ACEHSA agreed that the risk based evaluation of on site chemicals in groundwater indicated that the chemicals of concern did not pose a significant threat to on site personnel.

- Review of an Environmental Database Report obtained for this project indicated that the site was listed as a closed case on two databases, including the Spills Leaks, Investigation, and Cleanup (SLIC), and Alameda County Contaminated Sites (CS) databases. The surrounding properties that were listed in the EDR report are not considered a likely environmental concern to the site due to either their closed case status, distance and/or their cross or down-gradient direction from the site. However, one closed case (closed in 1998) is within 50 feet of the site's eastern boundary, and received no further action status even though TPHg and BTEX compounds remained in elevated concentrations in groundwater on the property.

- A site reconnaissance was conducted to evaluate current site conditions. The site was observed to be an asphalt paved parking lot, with several areas where obvious signs of subsurface investigation activity had occurred. Six destroyed monitoring well locations were observed in the southeastern and central sections of the site, and several other smaller diameter grouted borings were observed throughout the site. Several unlabeled drums were observed on site during our site reconnaissance, including 22 located in the southwestern section, 11 located in the northeastern section, and one drum observed just inside the fence adjacent to Webster Street, approximately 75 feet south of the kiosk. The drums appeared to contain solid waste and most were in fair condition, with the exception of a few drums in the northeastern section of the site that were rusting through near the top. No leaking drums were observed during our site reconnaissance.

- The property owner representative for the site is Cornish & Carey Commercial (C&C), a commercial real estate firm, who are representing a bank that acquired the site after the previous owner foreclosed. C&C was unaware of any historical environmental documents pertaining to the site and did not know of any adverse environmental conditions.

We have performed this Phase I ESA in general conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Practice E 1527-05, the United States Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) as set forth in the Code of Federal Regulations, Title 40, Part 312, and our proposal dated August 21, 2009. This assessment has revealed no RECs or historical RECs associated with the site with the following exceptions:

- Former hazardous materials stored and used on site including paints, oils, gasoline, and petroleum hydrocarbon based lubricants and solvents relating to machine shop activities.

- Total petroleum hydrocarbons as gasoline and VOC impacted groundwater and VOC impacted soils have been documented from previous site subsurface investigations.

- Several adjacent properties have stored and used similar hazardous materials routinely as part of their business activities that may have an environmental impact to the site.

1. INTRODUCTION

Ninyo & Moore conducted a Phase I Environmental Site Assessment (ESA) of the properties located at 2330 Webster Street and 2315 Valdez Street located in Oakland, California (site, Figure 1). Ninyo & Moore was contracted by the City of Oakland Public Works Agency (OPW) to conduct this assessment in accordance with the ASTM Standard Practice for Environmental Site Assessments (Designation Number E 1527-05). The following sections identify the purpose, the involved parties, the scope of work, and the limitations and exceptions associated with this Phase I ESA.

1.1. Purpose

In accordance with the ASTM Standard Practice for Environmental Site Assessments on Real Estate E1527-05, the objective of the Phase I ESA is to identify, to the extent feasible pursuant to the process described in ASTM Practice E 1527-05, recognized environmental concerns (RECs), which are defined by ASTM as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property."

1.2. Involved Parties

Mr. Nick Roy of Ninyo & Moore, an environmental professional, conducted site reconnaissance on December 14, 2009. He also performed regulatory inquiries, historical research, and document review. Mr. Kris Larson performed project oversight and quality review (Appendix A, Credentials). The Phase I ESA was prepared for the OPW.

1.3. Scope of Work

Ninyo & Moore's proposed scope of work for this Phase I ESA included the following:

- A review of a computerized database search of federal and state environmental record sources for the site and for properties located within the minimum search radii prescribed by the ASTM and AAI Standards for the respective environmental records

sources. The objective of the database search review was to evaluate locations where hazardous materials may have been used or stored and their possible effects on the site. If the review of the computerized database search identified properties of concern, Ninyo & Moore made inquiries regarding these properties to the appropriate regulatory agencies.

- A site visit to visually evaluate site characteristics for possible contaminated surface soil or surface water, improperly stored hazardous materials, possible sources of polychlorinated biphenyls (PCBs) and asbestos-containing materials (ACMs), and possible risks of site contamination from activities at the site. The owner of the site parcels was contacted and completed a questionnaire to document their knowledge of any environmental concerns on the property.

- A site vicinity reconnaissance to evaluate characteristics of adjacent or nearby properties for possible environmental influences on the site.

- A review of site and site vicinity historical land use to evaluate whether the past uses that may have contributed to the presence of environmental concerns at the site. Information used to review the site history included readily available historical aerial photographs, reverse telephone directories, Sanborn Insurance Maps, and United States Geological Survey (USGS) Topographic Maps.

- A review of available local agency regulatory files for the subject site, and if necessary, for selected properties in the site vicinity. Requests were made at the local building, fire, and health departments.

- Preparation of this Phase I ESA report. This report was prepared for the site and documents the environmental issues and discusses whether environmental concerns are present. The report included the findings and provided a discussion, conclusions and recommendations regarding the current environmental condition of the site.

1.4. Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein.

Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject property or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5. Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, as indicated in Section 13.1.5 of ASTM E 1527-05, the following, which is not intended to be all inclusive, represents out-of-scope items with respect to a Phase I ESA and, therefore, were not addressed: asbestos-containing materials, radon, lead-based paint, lead in drinking water, regulatory compliance, cultural and historic risk, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality (e.g., vapor intrusion), biological agents, mold, and high voltage power lines. Furthermore, Ninyo & Moore did not address interpretations of zoning regulations, building code requirements, or property title issues.

1.6. User Reliance

This report may be relied upon by, and is intended exclusively for the OPW. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than these is undertaken at said parties' sole risk.

1.7. Physical Limitations

No physical limitations were encountered during the preparation of this report.

1.8. Data Gaps

No data gaps were found during the preparation of this report.

2. SITE DESCRIPTION

The following section describes the location of the site, general characteristics and current uses of the site, the structures present at the site, and the tenant currently occupying the site. The current uses of adjacent properties are also described. A site location map is presented as Figure 1. Photographs of the site taken during the site reconnaissance are presented in Appendix B.

2.1. Site Location

The site is composed of two irregularly shaped vacant parcels. It is bordered by Valdez Street to the east, 23rd Street and two commercial properties (320 and 326 23rd Street) to the south, Webster Street to the west, and a parking lot (2340 Webster Street) and commercial property (355 24th Street) to the north. The entire site is covered with asphalt. A Site Vicinity Map (Figure 2) was created by using an aerial image provided by Google Earth. The Alameda County Assessor's map for the site parcels is provided with the Preliminary Title report in Appendix C.

2.2. General Site Characteristics

The two parcels form a site that is approximately 62,870 square feet in size. The site is undeveloped.

2.2.1. Site Structures

The site is used as a parking lot and no structures were present at the time of this Phase I report with the exception of a small parking kiosk located near the vehicular entrance at Webster Street (Figure 2).

2.2.2. Occupants

The site is currently vacant.

2.2.3. Roads

Adjacent roads include 23rd Street to the south, Valdez Street to the east, and Webster Street to the west.

2.3. Adjoining Properties

Table 1 lists the properties adjoining the site and associated land use. Based on the historical land use and document review of the site, it is unlikely that these properties have further impacted the environmental integrity of the site.

Table 1 – Adjoining Properties

Location	Current Occupant(s)
South	Restaurant (326 23rd Street), (320 23rd Street), apartment complex across 23rd Street (100 Grand Avenue).
East	Valdez Street, across which are a parking garage, and several parking lots (2302, 2316, 2328, 2332 and 2342 Valdez Street).
North	Parking lot (2340 Webster) and Art Studio (355 24th Street)
West	Webster Street, across which is a parking garage and parking lot

3. USER PROVIDED INFORMATION

The site is currently owned by Oakland PPD return, LLC. A Preliminary Title Report (PTR) as well as a Phase I Environmental Site Assessment conducted for the site in August 2004 (Aquaterra 2004) was supplied by the site owners. A copy of the PTR is located in Appendix C.

3.1. Other User Provided Information

No other information regarding the environmental condition of the site was provided to Ninyo & Moore.

4. PHYSICAL SETTING

The following sections include discussions of topographic, geologic, hydrogeologic conditions, and wetlands characterization in the vicinity of the site, based upon our document review and our visual reconnaissance of the site and adjacent areas.

4.1. Topographic Conditions

Based on a review of the USGS, 7.5-Minute Topographic Quadrangle Map Series, Oakland West, California (1959, Photorevised 1980), shows the site situated at an elevation of approximately 20 feet above mean sea level.

4.2. Geologic and Soil Conditions

The site is located in the Coast Ranges Geomorphic Province. The Coast Ranges extend approximately 600 miles from the Oregon border to central coastal California. The Coast Ranges are northwest trending and are underlain by marine and non-marine sedimentary rocks. These sedimentary units are underlain by either the Mesozoic Franciscan Formation (metamorphosed sea-floor deposits) or the granite Salina Block.

4.3. Site Hydrology

The following sections discuss the site hydrology in terms of surface water and groundwater.

4.3.1. Surface Waters

The closest water body to the site is lake Merritt, located approximately 1,000 feet to the southwest.

4.3.2. Wetlands

Based on information obtained from the U.S. Fish and Wildlife Service webpage (http://www.fws.gov/wetlands/Data/Mapper.html), wetlands are not noted on or adjacent to the site.

4.3.3. Flood Zones

According to FEMA Flood zone maps for the site are, the site is outside the 0.2% annual chance floodplain.

4.3.4. Groundwater

No groundwater information was available for the site, however groundwater data was available for two properties located within 1,500 feet of the site. A groundwater monitoring report prepared for 2630 Broadway in Oakland indicated that depth to groundwater ranged between 7 and 12 feet below ground surface (bgs). A groundwater monitoring report prepared for the property at 2225 Telegraph Street in Oakland indicated depth to groundwater at 11 to 15 feet bgs. These properties are approximately 800 feet north, and 1,300 feet west of the site. A groundwater gradient map was also reviewed for a property located on the northeast corner of 23rd and Valdez Street, east and adjacent to the site. Groundwater flow direction from this property ranges from southwest to southeast. Depth to groundwater is not expected to be significantly different for the site, however groundwater flow direction may be altered due to several factors including a difference in topographic gradient.

5. HISTORICAL USE INFORMATION

Ninyo & Moore conducted a historical record search for both the site and surrounding areas. This review included one or more of the following sources that were found to be both reasonably ascertainable and useful for the purposes of this Phase I ESA: historical aerial photographs, historical fire insurance maps, historical city directories, land title records, topographic maps, property tax records, and zoning/land use records. Table 2 lists the historical data types reviewed

for this Phase I ESA, their source, their respective dates, and data failures encountered during our review, if any.

Table 2 – Summary of Historical Records Reviewed

Data Type	Source	Source Dates	Data Limitation
Historical Aerial Photographs	Environmental Data Resources	See Table 3	None
Fire Insurance Maps	Environmental Data Resources	See Table 4	None
City Directories	Environmental Data Resources	See Section 5.3	None
Historical Topographic Maps	Environmental Data Resources	See Section 5.5	None

Although one or more of the sources listed above provided limited information with regard to the historical use of the site, the information gathered from the sources reviewed as a whole is adequate to develop a history of the previous uses of the site and the surrounding area in accordance with Section 8.3 of ASTM Practice E 1527-05.

Historical review information provided by EDR, including historical aerial photographs, city directories, Sanborn maps, and historical topographic maps, is presented in Appendix D.

5.1. Historical Aerial Photographs

Historical aerial photographs dated 1939 to 2005 were provided by EDR. Table 3 presents a summary of our review.

Table 3 – Aerial Photograph Review

Photo-graph Date	Subject Property	Adjacent Properties	
1939	The site was developed with what appears to be multiunit structures.	West:	Webster Street across which are unidentified structures.
		South:	Unidentified structures and 23rd Street across which are unidentified structures.
		East:	Valdez across which are unidentified structures.
		North:	Unidentified structures.
1946	The site appeared as it did in the 1939 photograph.	West:	Similar to the 1939 photograph
		South:	
		East:	
		North:	
1958	Two structures located on the west and northwest portion of the site have been removed and replaced by street level parking lots.	West:	Similar to the 1939 photograph
		South:	Similar to the 1939 photograph
		East:	A street level parking lot has replaced several structures across Valdez Street
		North:	Similar to the 1939 photograph
1965	Several other site structures have been removed on the west and east sides of the site and been replaced by street level parking.	West:	Similar to the 1939 photograph
		South:	A street level parking lot has replaced the former structures
		East:	Similar to the 1958 photograph
		North:	Similar to the 1939 photograph

Table 3 – Aerial Photograph Review

Photo-graph Date	Subject Property	Adjacent Properties	
1974	The image is not clear enough to discern any site changes.	West:	The image is not clear enough to discern any changes.
		South:	
		East:	
		North:	
1982	The image is not clear enough to discern any site changes.	West:	The image is not clear enough to discern any changes.
		South:	
		East:	
		North:	
1993	The structure formerly located in the southeast section of the site has been removed and replaced by street level parking.	West:	The former structures across Webster Street have been replaced by a parking garage.
		South:	No changes to the structures adjacent to the site, however a street level parking lot is observed replacing former structures across 23rd Street.
		East:	Several more structured replaced by street level parking lot.
		North:	Similar to the 1939 photograph
1998	Similar to the 1993 photograph.	West:	Similar to the 1993 photograph.
		South:	
		East:	
		North:	

Table 3 – Aerial Photograph Review

Photo-graph Date	Subject Property	Adjacent Properties	
2005	Similar to the 1993 photograph.	West:	Similar to the 1993 photograph.
		South:	
		East:	
		North:	

Based on our aerial photograph review, the site was developed with several multiunit structures since 1939 or earlier. The site gradually became entirely composed of street level parking as of 1993.

5.2. Sanborn Fire Insurance Rate Maps

Sanborn fire insurance rate maps for the subject site and adjacent areas were searched for by EDR and are summarized below in Table 4.

Table 4– Sanborn Fire Insurance Map Review

Map Date	Subject Property	Adjacent Properties	
1889	The subject site was composed of residential development.	West:	Webster Street, across which is a vacant lot and residential housing.
		South:	Residential housing and 23rd Street, across which were vacant lots.
		East:	Valdez Street, across which was vacant lots and residential housing
		North:	Vacant lots
1902	The subject site was composed of residential development.	West:	Webster Street, across which is a vacant lot and residential housing.
		South:	Residential housing and 23rd Street, across which were vacant lots.
		East:	Valdez Street, across which was vacant lots and residential housing
		North:	Residential development
1911	The subject site was composed of residential development.	West:	Webster Street, across which is a vacant lot and residential housing.
		South:	Residential housing and 23rd Street, across which is also residential housing.
		East:	Valdez Street, across which is residential housing
		North:	Residential development
1950	The site appeared to be composed of several addresses, including 2330 and 2336 Web-	West:	Webster Street, Across which is a Methodist Church and apartment building.

Table 4– Sanborn Fire Insurance Map Review

Map Date	Subject Property	Adjacent Properties	
	ster Street, 2315 and 2321, 2322, and 2335 Valdez Street. The southern portion of 2330 Webster street was a vacant lot, the central portion was an auto parking lot, and the northern portion was an unidentified commercial building with a store fronting Webster Street, a separate building east of the store with a section adjacent to the southeast section of the building used for paint and oil storage. 2336 Webster was occupied by an apartment building or boarding house. 2315 Valdez Street was occupied by the Labor Temple Association of Alameda County. 2321 and 2323 Valdez was occupied by a auto supply warehouse with a machine shop in the northeast corner. 2335 Valdez was a parking lot.	South:	A auto repair facility with gas and oil, and a store was located south of the 2330 Webster Street parcel on the northeast corner of 23rd and Webster Street, and an auto body and paint shop with a metal paint spray booth located in the northeast corner was located west of the Labor Temple at 320 23rd Street. A government building was located on the south side of 23rd Street across from the Labor Temple.
		East:	Valdez Street, across which is residential development and a parking garage.
		North:	A residential structure is located north of 2336 Webster, and a brake service and auto repair facility are located at the southwest corner of 24th Street and Webster Street. A commercial building with a machine shop is located north of 2335 Valdez.
1952 and 1954	The site appeared as it did in the 1950 map.	West: South: East: North:	The adjacent properties appeared similar to the 1950 map, with the exception of a larger machine shop in the building north of 2335 Valdez Street.
1959	The site appeared as it did in the 1950 map with the exception that 2336 Webster Street was now a vacant lot.	West: South: East:	The adjacent properties appeared similar to the 1954 map with minor and insignificant exceptions.

Table 4– Sanborn Fire Insurance Map Review

Map Date	Subject Property	Adjacent Properties	
		North:	
1962	The site appeared as it did in the 1959 map with the exception that the paint and storage area formerly southeast and adjacent to the 2330 building was gone.	West: South: East: North:	The adjacent properties appeared similar to the 1954 map with the exception that the former gas and oil facility at the northeast corner of 23rd and Webster Street was gone, and a machine shop replaced store located directly adjacent to the southwest corner of the 2330 Webster Street parcel.
1967	The former store and structures at 2330 Webster Street and 2321 and 2323 Valdez Street were observed to be gone, and 2330 Webster Street, which now included the former addresses 2336 Webster Street, and 2321, 2323, and 2335 Valdez Street was a vacant lots with the exception of a gas and oil structure located almost exactly in the center of the parcel.	West: South: East: North:	The adjacent properties appeared similar to the 1962 map with the exception that the former residential structure located north of the former 2336 Webster Street property was gone, and the property was a vacant lot.
1970	The site appeared as it did in the 1967 map.	West, South, East, and North	The adjacent properties appeared as they did in the 1967 map with minor and insignificant exceptions.

5.3. City Directories

Ninyo & Moore requested a City Directory search for select historical city directories provided by EDR for the years 1920 through 2006 for the site and select surrounding properties. None of the listings for the site included commercial or industrial business which would indicate a potential environmental concern. Off site properties of potential environmental concern included auto body and auto mechanical repair facilities at 320 and 326 23rd Street (located south and adjacent to the site), and auto body shop at 355 24th Street, and machine shop and 363 24th Street (north and adjacent to the site), and auto repair facilities at 2344 and 2350 Webster Street (within 200 feet north of the site).

5.4. Historical Chain-Of-Title Records

A historical chain-of-title report was not provided by the client for review by Ninyo & Moore for this Phase I ESA. A Preliminary Title was provided by the client for the site parcels, and the PTR did not indicate if there was an environmental lien on either of the site parcels.

5.5. Environmental Liens

According to an Environmental Lien Report prepared by EDR for 2330 Webster Street, no Environment Liens were found for the property. An Environmental Lien report was not requested for 2315 Valdez Street.

5.6. Historical Topographic Maps

Historical topographic maps dated 1915, 1948, 1949, 1959, 1968, 1973, and 1980 were provided by EDR. The site and site vicinity appears to be developed in all maps, with the four surrounding streets, 23rd, 24th, Valdez, and Webster Streets also observed on all maps.

6. ENVIRONMENTAL DATABASE REPORT REVIEW

A computerized, environmental database search report, dated December 14, 2009, was completed for Ninyo & Moore by Environmental Data Resources, Inc. (EDR). The EDR search was

completed and included federal, state, and local databases. An electronic copy of the EDR Radius Map Report is included in CD format in Appendix E. The review was conducted to evaluate whether the site or properties within the vicinity of the site have been identified as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

The database query was completed via block-face address matching (geo-coding). Sites located at the block-face level are reported to be within 250 feet of the true geographic location at a 97 percent confidence level. Any records obtained from a non-governmental source are required to be updated within 90 days of the date the government agency last made the information publicly available. The database report included a section entitled "Orphan Summary" (Orphans). Orphans are sites or facilities listed in EPA databases that cannot be mapped (geo-coded) due to incomplete or inaccurate information. However, the Orphan sites can be located by zip code or city name. Eighty three unmapped properties were included in the EDR report. Based on our site vicinity reconnaissance, none of the listed orphan sites are (due to the nature of the specific listings) close enough to the subject site to likely have a negative impact on the site.

The closest source of groundwater flow direction information in the EDR Report indicates that groundwater is flowing toward the south-southwest from the site. A summary of selected environmental databases searched, their corresponding search distance, and number of noted sites of environmental concern are presented in the following table.

Table 5 – Summary of Environmental Database Search

Database Name	Target Property	Radius	Database Date	Number of Properties
Federal Records				
EPA RCRA Large Quantity Generators	No	¼ mile	11/08	1
EPA RCRA Small Quantity Generators	Yes	¼ mile	11/08	17
State and Local Records				
Envirostor	Yes	1 mile	8/09	6
Response	No	1 mile	8/09	3
Historic UST	No	¼ mile	10/90	10
LUST	Yes	½ mile	9/09	43

Table 5 – Summary of Environmental Database Search

Database Name	Target Property	Radius	Database Date	Number of Properties
US BROWNFIELDS	No	½ mile	7/09	33
HIST CORTESE	Yes	½ mile	4/01	40
Registered USTs	No	¼ mile	9/09	3
SWEEPS UST	No	¼ mile	6/94	13
RCRA-NonGen	No	¼ mile	11/08	3
Notify 65	No	1 mile	10/93	14
CA FID UST	No	¼ mile	10/94	9
HIST Cal-Sites	No	1 mile	8/05	1
CA SLIC	No	½ mile	9/09	9
Alameda County CS	No	½ mile	10/09	49
WMUDS/SWAT		½ mile	4/00	1
EDR Historical Auto Stations	No	½ mile	9/09	53
FUDS	No	½ mile	12/08	1
EDR Historical Cleaners	No	¼ mile	n/a	15

Notes:
CA – California
EPA – United States Environmental Protection Agency
CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System
CORRACTS – Corrective Action Report
FID – Facility Inventory Database
LUST – Leaking Underground Storage Tank
NFRAP – No Further Remedial Action Planned
NPL – National Priority List
RCRA – Resource Conservation and Recovery Act
RCRIS – Resource Conservation and Recovery Information System
SLIC – Spills, Leaks, Investigations, and Cleanup Cost Recovery Listing
SWF/LF – Solid Waste Facilities/Landfill Sites
TSD – Treatment, Storage, and Disposal
UST – Underground Storage Tank
WMUDS/SWAT – Waste Management Unit Database/Solid Waste Activity Tracking
AST-Aboveground Storage Tank
SWRCY-Recycler Database
SWEEPS UST-Statewide Environmental Evaluation and Planning System
CS – Contaminated Sites
FUD - Formerly Used Defense Sites

The following paragraphs describe the databases that contain noted properties of environmental concern, and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject site. Based on EDR data and topographical information, groundwater flow direction ranges from the south and southwest.

RCRA-LQG: Distance Searched – ¼ mile

This database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Large quantity generators generate over 1000 kilograms of hazardous waste, or over 1 kg of acutely hazardous waste per month.

The site was not listed on this database; however, one property was listed within ¼ mile of the site. The property is cross-gradient of the site, and therefore has a low likelihood of environmentally impacting the site.

RCRA-SQG: Distance Searched – ¼ mile

This database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Small quantity generators generate between 100 and 1000 kilograms of hazardous waste per month.

The site was not listed on this database. In addition, 17 properties were listed within ¼ mile of the site. Six of these properties were located cross or downgradient of the site, and therefore have a low likelihood of impacting the site. No violations have been registered in the remaining cases, with the exception of few LUST cases, which have received regulatory closure. Therefore, the remaining properties have a low likelihood of environmentally impacting the site.

RESPONSE: Distance Searched – 1 mile

The database identifies confirmed release sites where DTSC is involved in remediation, either in lead or oversight capacity.

The site was not listed on this database; however, three properties were listed within 1 mile of the site. All three of the properties are greater than 1000 feet from the site, and therefore have a low likelihood of environmentally impacting the site.

ENVIROSTOR: Distance Searched – 1 mile

This database identifies sites that have known contamination or sites for which there may be reasons to investigate further.

The site was not listed on this database. In addition, six properties were listed within 1 mile of the site. The properties are greater than 1000 feet from the site, and therefore have a low likelihood of environmentally impacting the site.

LUST: Distance Searched – ½ mile

This database contains an inventory of reported leaking underground storage tank incidents.

The site was not listed on this database. In addition, 43 properties were listed within ½ mile of the site. Of the 43 properties listed, only one is a potential environmental concern to the site. The properties is a former Chevron at 2630 Broadway. This property is discussed in Section 8 of this report. The remainder of the properties are either cross or downgradient, or greater than 1,000 feet from the site, and therefore have a low likelihood of environmentally impacting the site.

Spills, Leaks Investigation and Cleanup (SLIC) Lists: Distance Searched – ½ mile

The SLIC database is maintained by the California SWRCB.

The site is listed as a closed case on this database, and further site information is provided in section 7.1. In addition, eight other properties were listed within ½ mile of the site. The properties are cross-gradient, down-gradient, or greater than 1000 feet from the site, and therefore have a low likelihood of environmentally impacting the site.

Alameda County Contaminated Sites (CS): Distance Searched – 1/2 mile

The CS database consists of contaminated sites. This database is maintained by the Toxic Release Program and the Leaking Underground Storage Tank Program.

The site was listed a closed case on this database and further site information is provided in section 7.1. In addition, 48 other properties were listed within ½ mile of the site. Most of these properties are closed cases, cross-gradient, down-gradient, or greater than 1000 feet from the site, and therefore have a low likelihood of environmentally impacting the site. Two of the properties listed, Chrysler and Chevron are discussed in the LUST section above.

UST: Distance Searched – 1/4 mile

This database contains registered USTs.

The site was not listed on this database; however, three properties was listed within ½ mile of the site. The properties are not listed on the LUST database, and therefore have a low likelihood of environmentally impacting the site.

US Brownfields: Distance Searched - 1/2 mile

Included in this listing are properties targeted for Brownfield site assessments.

The site was not listed on this database; however, 33 properties were listed within 1/2 mile of the site. All of the properties are either down-gradient, cross-gradient or greater than 1,500 feet from the site, and therefore have a low likelihood of environmentally impacting the site.

WMUDS/SWAT: Distance Searched - 1/2 mile

WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units.

The site is not listed on this database; however, one property is listed on this database. The property is down-gradient and therefore has a low likelihood of environmentally impacting the site.

HIST Cal-Sites: Distance Searched – 1 mile

This database contains both known and potential hazardous substance sites. It has been replaced by ENVIROSTOR.

The site was not listed on this database; however, one property was listed within 1 mile of the site. The property is greater than 1/2 a mile from the site and therefore has a low likelihood of environmentally impacting the site.

CA FID UST: Distance Searched – ¼ mile

This database contains active and inactive UST locations.

The site was not listed on this database; however, nine properties were listed within ¼ mile of the site. The properties are either closed cases, down-gradient or cross-gradient from the site, or are not listed in the LUST database, and therefore have a low likelihood of environmentally impacting the site.

HIST UST: Distance Searched – ¼ mile

This database contains historical registered USTs.

The site was not listed on this database; however, 10 properties were listed within ¼ mile of the site. The properties are either closed cases, down-gradient or cross-gradient from the site, or are not listed in the LUST database, and therefore have a low likelihood of environmentally impacting the site.

SWEEPS UST: Distance Searched – ¼ mile

This database contains a UST listing that is no longer updated or maintained.

The site was not listed on this database; however, 13 properties were listed within ¼ mile of the site. The properties are either closed cases, down-gradient or cross-gradient from the site, or are not listed in the LUST database, and therefore have a low likelihood to environmentally impact the site.

RCRA-Non-Gen: Distance Searched – ¼ mile

This database contains a list of sites that contain land use restrictions.

The site was not listed on this database; however, three properties are listed within ¼ mile of the site. Because these properties do not generate hazardous waste, there is a low likelihood to environmentally impact the site.

FUDS: Distance Searched - 1/2 mile

This database includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

The site is not listed on this database; however, one property is listed on this database. This property is greater than 1/2 mile from the site, and therefore has a low likelihood of environmentally impacting the site.

Historical Cortese List: Distance Searched – 1/2 mile

The Historical Cortese sites are designated by the State Water Resources Control Board, the Integrated Waste Board, and the Department of Toxic Substances Control. This listing is no longer updated.

The site was listed on this database. In addition, 40 properties were listed within ½ mile of the site. The properties are either closed cases, down-gradient or cross-gradient from the site, or greater than 1,000 feet from the site, and therefore have a low likelihood to environmentally impact the site.

Notify 65 List: Distance Searched – 1 mile

The Notify 65 database contains facilities that have given notification of any release which could impact drinking water. This listing is maintained by the State Water Resources Control Board.

The site is not listed on this database; however, 14 properties are listed on this database. The properties are down-gradient, cross-gradient, or at least 1000 feet from the site, and therefore have a low likelihood to environmentally impact the site.

EDR Historical Auto Stations: Distance Searched – ¼ mile

The database contains a listing of potential auto stations sites that were available to EDR researchers.

The site was listed on this database for the years 1933 and 1943. In addition 52 other properties are listed on this database. Twenty of these properties are listed upgradient and within 1,000 feet of the site. However, based on the years these properties were in business (ranging from 1925 at the earliest and 1967 at the latest) there is a low likelihood they would environmentally impact the site. The remaining properties were either down or

crossgradient, and/or greater than 1,000 feet from the site, and therefore have a low likelihood of impacting the site.

EDR Historical Cleaners: Distance Searched – ¼ mile

The database contains a listing of potential dry cleaner sites that were available to EDR researchers.

The site is not listed on this database; however, 15 properties is listed on this database. Twenty of these properties are listed upgradient and within 1,000 feet of the site. However, based on the years these properties were in business (ranging from 1925 at the earliest and 1967 at the latest) there is a low likelihood of them environmentally impacting the site. The remaining properties were either down or crossgradient, and/or greater than 1,000 feet from the site, and therefore have a low likelihood of impacting the site.

7. HISTORICAL DOCUMENTS OF SIGNIFICANCE

Electronic copies of all available documents listed in this section are included on a CD in Appendix F of this report.

7.1. Phase I Environmental Site Assessment Labor Temple Parking Lot, 2330 Webster Street, Oakland, California

This Phase I ESA (AquaTerra, 2004) included the parcels located at 2330 Webster Street and 2315 Valdez Street. AquaTerra concluded that no recognized environmental concerns were discovered while conducting the Phase I ESA with the exception of one 55-gallon drum resulting from a previous subsurface investigation, a gasoline station occupying the central portion of the site between 1969 to 1979, and shallow groundwater was impacted with low concentrations of volatile organic compounds (VOCs) and petroleum hydrocarbon compounds. The report also summarized the results of a subsurface investigation conducted by Versar, Inc. in November 1995. The subsurface investigation consisted of an electromagnetic survey of the property which identified a 60 ft x 110 ft buried object in the southeastern section of the site, and two buried pipes in the center of the property, and the installation of 18 borings for soil and groundwater sample collection. The borings were installed no deeper than 20 feet bgs, and VOC (specifically 1,2-dichlorobenzene) impacted soil was reported in a boring located in the northern section of the site. An addendum to the

subsurface investigation report was prepared which included information on the installation of several site groundwater monitoring wells. Groundwater analytical data collected from one of the wells located in the southern section of the site reported VOCs, including carbon tetrachloride at 430 micrograms per liter (µg/L), 1,1-dichloroethene at 22 µg/L and 1,4-dichlorobenzene at 15 µg/L impacting the site groundwater. Total petroleum hydrocarbons as gasoline (TPH-g) was also reported in the well at 65 µg/L. A groundwater sample collected from a monitoring well installed in the center of the property reported toluene at 1.3 ug/L.

No further details on the subsurface features discovered during the electromagnetic survey were described in the Phase I ESA report and no figures were presented in the Phase I ESA illustrating the location of the site groundwater monitoring wells. The Phase I ESA did mention that, during site reconnaissance, six decommissioned groundwater monitoring wells were observed on a north-south azimuth that bisected the property.

7.2. Alameda County Environmental Health Services Agency Labor Temple Parking Lot No Further Action Letter

This document was prepared by the ACEHSA (ACEHSA, 1996) in response to the review of a request for case closure and related risk assessment prepared for the site by Dames and Moore dated July 29, 2006. The ACEHSA reported that their agency in conjunction with the San Francisco Bay Regional Water Quality Control Board (RWQCB) agreed that the risk based evaluation of on site chemicals in groundwater did not pose a significant threat to on site personnel, and that no further action was required. The document also indicated that worker protection should be considered during site development, and groundwater could not be used as a drinking water source. A copy of the document is included in Appendix F.

8. ENVIRONMENTAL REGULATORY AGENCY INQUIRIES

Based on the site reconnaissance, historical research, and environmental database review, information regarding the site was requested from local government agencies and, if available, reviewed by Ninyo & Moore. A review of the EDR documents listed in Section 6 of this report did not indicate a surrounding property of concern that was either cross-gradient or up-gradient of the site. Based on information obtained through requests to local government agencies, it was judged that interviews of regulatory officials would not provide additional meaningful information to the Phase I ESA.

8.1. San Francisco Bay Regional Water Quality Control Board

Ninyo & Moore reviewed records available on the RWQCB internet database (Geotracker). No documents were available for the site. Records were reviewed for one property located approximately 800 feet north and upradient of the site. CRA, First Semi-Annual 2009 Groundwater Monitoring Report, Former Chevron Service Station no. 9-2506, 2630 Broadway, Oakland, California, dated June 2, 2009.

This semi-annual groundwater monitoring report described groundwater monitoring results for an upgradient property located approximately 800 feet north of the site. Concentrations of TPH-g (4,400 µg/L), benzene (66 µg/L), and MTBE (33 µg/L) were reported in the southern most groundwater monitoring well on the property. These constituents appear to be migrating from the property toward the site, however it is difficult to assess if site groundwater would be impacted because of the distance the plume would need to travel.

8.2. California Department of Toxic Substances Control (DTSC)

Ninyo & Moore reviewed the DTSC online database, Envirostor, for any related site documents. Envirostor did not contain any files for the site address.

8.3. Alameda County Environmental Health Department (ACEHD)

Ninyo & Moore reviewed records available on the ACEHD online database for the site address. Three documents were stored in the database, including the "No Further Action" letter discussed in Section 7.2. One of the remaining two documents is addressed to Mr. Richard Belyea of Home Savings of America and discusses compensation for reviewing a Phase II ESA for the Labor Temple Site, dated April 22, 1996. The remaining document is a case closure letter prepared by the ACDEHS and dated July 31, 1998 for an UST case at 2302 Valdez Street, located east-southeast and approximately 50 feet from the site. A review of groundwater data from a case closure summary included in the document indicated that an 8,000 gallon gasoline UST and a 750 gallon waste oil UST were removed from beneath the sidewalk located on the northeast corner of Valdez and 23rd Street. Elevated concentrations of total petroleum hydrocarbon (TPH) compounds were detected in the UST pit soils once the USTs were removed, so over-excavation of the impacted soils was completed. Several groundwater monitoring wells were installed on the property, two of which (MW-1 and MW-4) were located on the western edge of the property and adjacent to Valdez Street. Groundwater samples collected in 1998 from the well MW-1 reported elevated TPH-g compounds at 3,500 µg/L. MW-1 is located approximately 50 feet east of the site. Groundwater samples collected from well MW-4, located approximately south of MW-1 and the same distance from the site as MW-1, did not report any TPH compounds analyzed above their respective reporting limits. Groundwater gradient maps indicated that the groundwater flow direction is toward the south-southwest and southeast.

Ninyo & Moore also attempted to contact ACEHD several times through phone calls requesting additional documentation for the site, in particular the Phase II report that was prepared by Versar in November 1995. The ACEHD did not respond to our messages as of the preparation date of this report.

8.4. City of Oakland Building Department (OBD)

Ninyo & Moore made a request to the OBD to review records that may be available for the site address. The OBD indicated that it had no records for the site.

8.5. City of Oakland Fire Department (OFD)

Ninyo & Moore made a request to the OFD to review records that may be available for the site address. The OFD was not responsive to our request as of the date of this report.

9. SITE RECONNAISSANCE

On December 14, 2009, Mr. Nick Roy of Ninyo & Moore conducted site reconnaissance. The reconnaissance involved a visual inspection of the site and visual observations of adjoining properties. One structure, a small parking attendant booth, was observed on the property.

9.1. Use and Storage of Hazardous Substances and Petroleum Products

No use or storage of hazardous materials was observed on site.

9.2. Storage and Disposal of Hazardous Waste

Thirty three unlabeled drums, with unknown contents were observed on site. A further description is below.

9.3. Unidentified Substance Containers

Thirty four unlabeled drums were observed on site during our site reconnaissance. Twenty two of the drums were stored on pallets and located in the southern section of the site, 11 of the drums were located in the northeastern section stored directly on the asphalt parking lot, and one drum was observed just inside the fence adjacent to Webster Street, approximately 75 feet south of the kiosk. All drums were stored upright, with the exception of one which was stored on its side. The drums appeared to contain solid waste and most were in fair condition, with

the exception of a few drums in the northeaster section of the site that were rusting through near the top. No leaking drums were observed during our site reconnaissance.

9.4. Evidence of Releases

No evidence of a release was observed on site.

9.5. Aboveground Storage Tanks and Underground Storage Tanks

No evidence of an AST or UST located at the site was observed during our site reconnaissance.

9.6. Polychlorinated Biphenyls (PCB)

Historically, PCBs (a group of hazardous substances and suspected human carcinogens) were widely used as an additive in cooling oils for electrical components. Typical sources of PCBs can include fluorescent light ballasts and electrical transformers. No evidence of a PCB source at the site was observed during our site reconnaissance.

9.7. Wastewater Systems

The site is vacant and not connected to a wastewater system.

9.8. Storm water Systems

One storm drain was observed, located in the extreme southeast corner of the site. The west site of the site drains to the west toward Webster Street, and the east side of the site drains toward the southeast towards the intersection of 23rd and Valdez Streets.

9.9. Wells

Evidence of six former groundwater monitoring wells was observed on site. Remains of 12 inch diameter grouted borings was observed in the central and southeastern portion of the site. The wells were most likely related to the subsurface investigations conducted in the mid 1990's.

9.10. Surface/Subsurface Structures

The site is vacant and no surface structures are present other than the parking kiosk located near the site entrance. An asphalt patched area, approximately 10 feet by 15 feet in area, was observed near the central-north section of the site (Figure 2). The remnants of a former monitoring well was also observed in this area, which may be the former location of a gas island and/or dispenser.

9.11. On-Site Records

The site is vacant and no records are available on-site.

9.12. Other Environmental Issues

No other environmental issues were noted during the site reconnaissance.

10. INTERVIEW

The property owner representative for the site is Cornish & Carey Commercial (C&C), a commercial real estate firm. They are representing a bank that acquired the site after the previous owner foreclosed. Mr. Sean Fulp, a vice president with C&C, was contacted on December 11, 2009 to gain permission for a site walk. Mr. Fulp was unaware of any historical environmental documents pertaining to the site and did not know of any adverse environmental conditions.

11. FINDINGS, OPINIONS, AND CONCLUSIONS

Based upon the results of this Phase I ESA, the following findings, opinions, and conclusions are provided.

11.1. Findings and Opinions

The following presents a summary of the findings and opinions associated with this Phase I ESA performed for the site, including known or suspect RECs and historical RECs.

- The site is currently a paved parking lot. It is surrounded by a chain link fence with several openings for pedestrian access. The site contains one small structure, a parking kiosk, located adjacent to a driveway on the Webster Street side of the property near the northeast corner of the site. The earliest historical records reviewed indicate residential development at the site as early as 1889, and commercial and industrial use as early as 1950. Commercial uses included an auto supply store and warehouse, machine shops, a gas station, and a labor meeting lodge for several labor unions. Between approximately 1950 and 1970 several of the buildings were demolished, and the site ultimately became completely paved and utilized as a parking lot. Adjacent properties historically included auto body shop and repair facilities, parking garages, and machine shops.

- A historical record search was conducted for both the site and surrounding areas. This review included a review of aerial photographs, city directories, fire insurance maps, and topographic maps. Records were requested or reviewed for the following agencies: the San Francisco Bay Regional Water Quality Control Board (RWQCB), Department of Toxic Substances Control, Alameda County Environmental Health Services Agency (ACEHSA), City of Oakland Building Department, and City of Oakland Fire Department. The relevant files needed to complete this report were located within the RWQCB Geotracker online database.

- Environmental Documents reviewed for the site included a Phase I ESA prepared in August 2004, and several letters from the ACEHSA. The August 2004 Phase I reported that a subsurface investigation was conducted in November 1995 which consisted of an electromagnetic survey of the property and the installation of 18 borings for soil and groundwater sample collection. Volatile organic compounds (specifically 1,2-dichlorobenzene) were detected in samples collected from the northern section of the site. Additional investigations and samples collected from groundwater monitoring wells installed on site reported carbon tetrachloride, 1,1-dichloroethene, 1,4-dichlorobenzene, toluene, and total petroleum hydrocarbons as gasoline impacting the site groundwater. The electromagnetic survey identified a 60 ft x 110 ft buried object in the southeastern section of the site, and two buried pipes in the center of the property.

- A “No Further Action” letter was prepared by the ACEHSA (in conjunction with the RWQCB) in October 1996 after reviewing a request for case closure and related risk assessment prepared in July 2006. The ACEHSA agreed that the risk based evaluation of on site chemicals in groundwater indicated that the chemicals of concern did not pose a significant threat to on site personnel.

- Review of an Environmental Database Report obtained for this project indicated that the site was listed as a closed case on two databases, including the Spills Leaks, Investigation, and Cleanup (SLIC), and Alameda County Contaminated Sites (CS) databases. The surrounding properties that were listed in the EDR report are not considered a likely environmental concern to the site due to either their closed case status, distance and/or their cross or down-gradient direction from the site. However, one closed case

(closed in 1998) is within 50 feet of the site's eastern boundary, and received no further action status even though TPHg and BTEX compounds remained in elevated concentrations in the groundwater on the property.

- A site reconnaissance was conducted to evaluate current site conditions. The site was observed to be an asphalt paved parking lot, with several areas where obvious signs of subsurface investigation activity had occurred. Six destroyed monitoring well locations were observed in the southeastern and central sections of the site, and several other smaller diameter grouted borings were observed throughout the site. Several unlabeled drums were observed on site during our site reconnaissance, including 22 located in the southwestern section, 11 located in the northeastern section, and one drum observed just inside the fence adjacent to Webster Street, approximately 75 feet south of the kiosk. The drums appeared to contain solid waste and most were in fair condition, with the exception of a few drums in the northeastern section of the site that were rusting through near the top. No leaking drums were observed during our site reconnaissance.

- The property owner representative for the site is Cornish & Carey Commercial (C&C), a commercial real estate firm, who are representing a bank that acquired the site after the previous owner foreclosed. C&C was unaware of any historical environmental documents pertaining to the site and did not know of any adverse environmental conditions.

11.2. Conclusions and Recommendations

We have performed this Phase I ESA in general conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Practice E 1527-05, the United States Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) as set forth in the Code of Federal Regulations, Title 40, Part 312, and our proposal dated August 21, 2009. This assessment has revealed no RECs or historical RECs associated with the site with the following exceptions:

- Former hazardous materials stored and used on site including paints, oils, gasoline, and petroleum hydrocarbon based lubricants and solvents relating to machine shop activities.

- Total petroleum hydrocarbons as gasoline and VOC impacted groundwater and VOC impacted soils have been documented from previous site subsurface investigations.

- Several adjacent properties have stored and used similar hazardous materials routinely as part of their business activities that may have an environmental impact to the site.

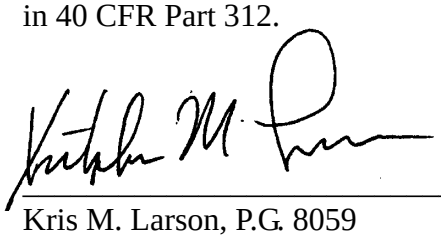
- A Phase II Environmental Site Assessment should be conducted on site to evaluate the current soil and groundwater conditions.

11.3. Deviations

This report was prepared in accordance with ASTM Practice E 1527-05. No deviations from this standard occurred in this Phase I ESA. Based on the information gathered by Ninyo & Moore for the purposes of this assessment, it is our opinion that the data obtained from our site reconnaissance, records reviewed, and property owner questionnaire, is adequate to make a conclusion on the environmental condition of the subject site with respect to the existence or lack of RECs associated with the site.

12. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by §312.10 of 40 Code of Federal Regulations (CFR) 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Kris M. Larson, P.G. 8059
Senior Environmental Geologist

PRELIMINARY REPORT

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage of said Policy or Policies are set forth in Exhibit A attached. Copies of the Policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of September 18, 2009 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

ALTA Extended Owner's Policy 1402.06 (6-17-06)

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

Oakland PPD Return, LLC

The estate or interest in the land hereinafter described or referred to covered by this Report is:

A fee.

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2009-2010.

First Installment:	$26,535.69, PAYABLE
Penalty:	$0.00
Second Installment:	$26,535.69, PAYABLE
Penalty:	$0.00
Tax Rate Area:	17-022
A. P. No.:	008-0668-04

(Affects Parcel One)

2. General and special taxes and assessments for the fiscal year 2009-2010.

First Installment:	$67,117.24, PAYABLE
Penalty:	$0.00
Second Installment:	$67,117.24, PAYABLE
Penalty:	$0.00
Tax Rate Area:	17-022
A. P. No.:	008-0668-009-07

(Affects Parcels Two and Three)

3. The lien of defaulted taxes for the fiscal year 2008-2009, and any subsequent delinquencies.

Tax Rate Area:	17-022
A. P. No.:	008-0668-004
Amount to redeem:	$57,604.21
Valid through:	October 2009
Amount to redeem:	$58,348.77
Valid through:	November 2009

The County Tax Collector could not verify the amounts shown above. Please verify the amounts with the County Tax Collector prior to the close of the contemplated transaction.

(Affects Parcel One)

4. The lien of defaulted taxes for the fiscal year 2008-2009, and any subsequent delinquencies.

Tax Rate Area:	17-022
A. P. No.:	008-0668-009-07
Amount to redeem:	$145,361.44
Valid through:	October 2009
Amount to redeem:	$147,240.79
Valid through:	November 2009

The County Tax Collector could not verify the amounts shown above. Please verify the amounts with the County Tax Collector prior to the close of the contemplated transaction.

(Affects Parcel Two)

5. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.

6. An unrecorded lease dated December 30, 1983, executed by Kaiser Center Properties, a California general partnership as lessor and Ordway Associates, an Illinois general partnership as lessee, as disclosed by a Memorandum of Agreement recorded December 30, 1983 as Instrument No. 83244960 of Official Records.

Document(s) declaring modifications thereof recorded December 23, 1988 as Instrument No. 88327579 of Official Records.

Document(s) declaring modifications thereof recorded February 15, 1990 as Instrument No. 90045256 of Official Records.

Document(s) declaring modifications thereof recorded July 13, 1992 as Instrument No. 92225713 of Official Records.

The lessee's interest under the lease has been assigned to Prentiss Properties Acquisition Partners, L.P., a Delaware limited partnership by assignment recorded May 21, 1998 as Instrument No. 98170663 of Official Records.

The lessor's interest under the lease has been assigned to Upper Lake Merritt, LLC, a Delaware limited liability company by assignment recorded August 30, 2000 as Instrument No. 2000260958 of Official Records.

Defects, liens, encumbrances or other matters affecting the leasehold estate, whether or not shown by the public records.

7. The fact that the land lies within the boundaries of the Central District Urban Renewal Redevelopment Project Area, as disclosed by the document recorded September 1, 1995 as Instrument No. 95201279 of Official Records.

   Document(s) declaring modifications thereof recorded December 3, 2007 as Instrument No. 2007409569 of Official Records.

8. The terms and provisions contained in the document entitled "Parking Agreement" recorded August 30, 2000 as Instrument No. 2000260956 of Official Records.

9. The terms and provisions contained in the document entitled "Notice of Limitation of Use of Property" recorded May 31, 2006 as Instrument No. 2006213915 of Official Records.

10. The terms and provisions contained in the document entitled "Resolution Number 79756 C.M.S." recorded August 16, 2006 as Instrument No. 2006314789 of Official Records.

11. The terms and provisions contained in the document entitled "Resolution Number 79755 C.M.S." recorded August 21, 2006 as Instrument No. 2006319773 of Official Records.

12. A claim of lien recorded November 2, 2007 as Instrument No. 2007383561 of Official Records.

Lien claimant:	Swinerton Builders
Amount:	$70,000.00

   Document(s) declaring modifications thereof recorded January 31, 2008 as Instrument No. 2008024362 of Official Records.

   Notice of pendency of action recorded August 12, 2008 as Instrument No. 2008242392 of Official Records.

Court:	Superior Court of the State of California Alameda County, Northern Division
Case No.:	RG 08368963
Plaintiff:	Swinerton Builders
Defendant:	PPD Merritt 1, LLC; Molasky Pacific Properties, LLC; and does 1 through 100, inclusive
Purpose:	Real property claim

13. Any irregularity in the foreclosure proceedings leading up to the Trustee's Deed recorded September 18, 2009 as Instrument No. 2009300097 of Official Records.

14. Any right or asserted right of a creditor, trustee or debtor in possession in bankruptcy to avoid that certain conveyancing document which recorded September 18, 2009 as Instrument No. 2009300097 of Official Records, pursuant to Title 11 of the United States Codes.

15. Rights of parties in possession.

16. Any facts, rights, interests or claims which would be disclosed by a correct ALTA/ACSM survey.

17. Prior to the issuance of any policy of title insurance, the Company will require:
An ALTA/ACSM survey of recent date which complies with the current minimum standard detail requirements for ALTA/ACSM land title surveys.

INFORMATIONAL NOTES

Note: The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

1. According to the latest available equalized assessment roll in the office of the county tax assessor, there is located on the land a(n) Commercial Structure known as 2315 Valdez Street, & 2330 Webster Street, Oakland, California.

2. According to the public records, there has been no conveyance of the land within a period of twenty four months prior to the date of this report, except as follows:

   A document recorded September 18, 2009 as Instrument No. 2009300097 of Official Records.
   From: First American Title Insurance Company
   To: Oakland PPD Return, LLC

3. It appears that a work of improvement is in progress or recently completed on the land. The Company will require various documents and information, including but not limited to a completed mechanics' lien risk analysis, construction contract(s), lien waivers, loan agreement, disbursement information, executed indemnity agreement and current financial information from proposed indemnitors, in order to determine whether mechanics' lien insurance can be issued. Other requirements may be made following the review of such documents and information.

4. Should this report be used to facilitate your transaction, we must be provided with the following prior to the issuance of the policy:

   A. WITH RESPECT TO A CORPORATION:

      a. A certificate of good standing of recent date issued by the Secretary of State of the corporation's state of domicile.

      b. A certificate copy of a resolution of the Board of Directors authorizing the contemplated transaction and designating which corporate officers shall have the power to execute on behalf of the corporation.

      c. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

   B. WITH RESPECT TO A CALIFORNIA LIMITED PARTNERSHIP:

      a. A certified copy of the certificate of limited partnership (form LP-1) and any amendments thereto (form LP-2) to be recorded in the public records;

b. A full copy of the partnership agreement and any amendments;

c. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;

d. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

C. WITH RESPECT TO A FOREIGN LIMITED PARTNERSHIP:

a. A certified copy of the application for registration, foreign limited partnership (form LP-5) and any amendments thereto (form LP-6) to be recorded in the public records;

b. A full copy of the partnership agreement and any amendment;

c. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;

d. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

D. WITH RESPECT TO A GENERAL PARTNERSHIP:

a. A certified copy of a statement of partnership authority pursuant to Section 16303 of the California Corporation Code (form GP-I), executed by at least two partners, and a certified copy of any amendments to such statement (form GP-7), to be recorded in the public records;

b. A full copy of the partnership agreement and any amendments;

c. Requirements which the Company may impose following its review of the above material required herein and other information which the Company may require.

E. WITH RESPECT TO A LIMITED LIABILITY COMPANY:

a. A copy of its operating agreement and any amendments thereto;

b. If it is a California limited liability company, a certified copy of its articles of organization (LLC-1) and any certificate of correction (LLC-11), certificate of amendment (LLC-2), or restatement of articles of organization (LLC-10) to be recorded in the public records;

c. If it is a foreign limited liability company, a certified copy of its application for registration (LLC-5) to be recorded in the public records;

d. With respect to any deed, deed of trust, lease, subordination agreement or other document or instrument executed by such limited liability company and presented for recordation by the Company or upon which the Company is asked to rely, such document or instrument must be executed in accordance with one of the following, as appropriate:

(i) If the limited liability company properly operates through officers appointed or elected pursuant to the terms of a written operating agreement, such documents must be executed by at least two duly elected or appointed officers, as follows: the chairman of the board, the president or any vice president, and any secretary, assistant secretary, the chief financial officer or any assistant treasurer;

(ii) If the limited liability company properly operates through a manager or managers identified in the articles of organization and/or duly elected pursuant to the terms of a written operating agreement, such document must be executed by at least two such managers or by one manager if the limited liability company properly operates with the existence of only one manager.

e. Requirements which the Company may impose following its review of the above material and other information which the Company may require.

F. WITH RESPECT TO A TRUST:

a. A certification pursuant to Section 18500.5 of the California Probate Code in a form satisfactory to the Company.

b. Copies of those excerpts from the original trust documents and amendments thereto which designate the trustee and confer upon the trustee the power to act in the pending transaction.

c. Other requirements which the Company may impose following its review of the material require herein and other information which the Company may require.

G. WITH RESPECT TO INDIVIDUALS:

a. A statement of information.

The map attached, if any, may or may not be a survey of the land depicted hereon. First American expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

NOTICE

Section 12413.1 of the California Insurance Code, effective January 1, 1990, requires that any title insurance company, underwritten title company, or controlled escrow company handling funds in an escrow or sub-escrow capacity, wait a specified number of days after depositing funds, before recording any documents in connection with the transaction or disbursing funds. This statute allows for funds deposited by wire transfer to be disbursed the same day as deposit. In the case of cashier's checks or certified checks, funds may be disbursed the next day after deposit. In order to avoid unnecessary delays of three to seven days, or more, please use wire transfer, cashier's checks, or certified checks whenever possible.

If you have any questions about the effect of this new law, please contact your local First American Office for more details.

EXHIBIT A
LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)

1. CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY - 1990
SCHEDULE B

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records. Proceedings by a public agency which may result in taxes or assessments, or notice of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the public records.

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable "doing business" laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by their policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

2. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY FORM B - 1970
SCHEDULE OF EXCLUSIONS FROM COVERAGE

1. Any law, ordinance or governmental regulation (including but not limited to building and zoning ordinances) restricting or regulating or prohibiting the occupancy, use or enjoyment of the land, or regulating the character, dimensions or location of any improvement now or hereafter erected on the land, or prohibiting a separation in ownership or a reduction in the dimensions of area of the land, or the effect of any violation of any such law, ordinance or governmental regulation.
2. Rights of eminent domain or governmental rights of police power unless notice of the exercise of such rights appears in the public records at Date of Policy.
3. Defects, liens, encumbrances, adverse claims, or other matters (a) created, suffered, assumed or agreed to by the insured claimant; (b) not known to the Company and not shown by the public records but known to the insured claimant either at Date of Policy or at the date such claimant acquired an estate or interest insured by this policy and not disclosed in writing by the insured claimant to the Company prior to the date such insured claimant became an insured hereunder; (c) resulting in no loss or damage to the insured claimant; (d) attaching or created subsequent to Date of Policy; or (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.

3. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY FORM B - 1970
WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 2 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage by reason of the matters shown in parts one and two following:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material heretofore or hereafter furnished, imposed by law and not shown by the public records.

4. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1970
WITH A.L.T.A. ENDORSEMENT FORM 1 COVERAGE
SCHEDULE OF EXCLUSIONS FROM COVERAGE

1. Any law, ordinance or governmental regulation (including but not limited to building and zoning ordinances) restricting or regulating or prohibiting the occupancy, use or enjoyment of the land, or regulating the character, dimensions or location of any improvement now or hereafter erected on the land, or prohibiting a separation in ownership or a reduction in the dimensions or area of the land, or the effect of any violation of any such law ordinance or governmental regulation.
2. Rights of eminent domain or governmental rights of police power unless notice of the exercise of such rights appears in the public records at Date of Policy.
3. Defects, liens, encumbrances, adverse claims, or other matters (a) created, suffered, assumed or agreed to by the insured claimant, (b) not known to the Company and not shown by the public records but known to the insured claimant either at Date of Policy or at the date such claimant acquired an estate or interest insured by this policy or acquired the insured mortgage and not disclosed in writing by the insured claimant to the Company prior to the date such insured claimant became an insured hereunder, (c) resulting in no loss or damage to the insured claimant; (d) attaching or created subsequent to Date of Policy (except to the extent insurance is afforded herein as to any statutory lien for labor or material or to the extent insurance is afforded herein as to assessments for street improvements under construction or completed at Date of Policy).
4. Unenforceability of the lien of the insured mortgage because of failure of the insured at Date of Policy or of any subsequent owner of the indebtedness to comply with applicable "doing business" laws of the state in which the land is situated.

5. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1970
WITH REGIONAL EXCEPTIONS

When the American Land Title Association Lenders Policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy, the exclusions set forth in paragraph 4 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage by reason of the matters shown in parts one and two following:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

6. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1992
WITH A.L.T.A. ENDORSEMENT FORM 1 COVERAGE
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy;
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy (except to the extent that this policy insures the priority of the lien of the insured mortgage over any statutory lien for services, labor or material or the extent insurance is afforded herein as to assessments for street improvements under construction or completed at date of policy); or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable "doing business" laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any statutory lien for services, labor or materials (or the claim of priority of any statutory lien for services, labor or materials over the lien of the insured mortgage) arising from an improvement or work related to the land which is contracted for and commenced subsequent to Date of Policy and is not financed in whole or in part by proceeds of the indebtedness secured by the insured mortgage which at Date of Policy the insured has advanced or is obligated to advance.
7. Any claim, which arises out of the transaction creating the interest of the mortgagee insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:
   (i) the transaction creating the interest of the insured mortgagee being deemed a fraudulent conveyance or fraudulent transfer; or
   (ii) the subordination of the interest of the insured mortgagee as a result of the application of the doctrine of equitable subordination; or
   (iii) the transaction creating the interest of the insured mortgagee being deemed a preferential transfer except where the preferential transfer results from the failure:
   (a) to timely record the instrument of transfer; or
   (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

7. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1992 WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 6 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

8. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 1992 EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance

resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
(b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
(a) created, suffered, assumed or agreed to by the insured claimant;
(b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
(c) resulting in no loss or damage to the insured claimant;
(d) attaching or created subsequent to Date of Policy; or
(e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.
4. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:
(i) the transaction creating the estate or interest insured by this policy being deemed a fraudulent conveyance or fraudulent transfer; or
(ii) the transaction creating the estate or interest insured by this policy being deemed a preferential transfer except where the preferential transfer results from the failure:
(a) to timely record the instrument of transfer; or
(b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

9. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 1992 WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 8 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

10. AMERICAN LAND TITLE ASSOCIATION RESIDENTIAL TITLE INSURANCE POLICY - 1987 EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
   * land use
   * land division
   * improvements on the land
   * environmental protection

   This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.
   This exclusion does not limit the zoning coverage described in items 12 and 13 of Covered Title Risks.
2. The right to take the land by condemning it, unless:
   * a notice of exercising the right appears in the public records on the Policy Date
   * the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking.
3. Title Risks:
   * that are created, allowed, or agreed to by you
   * that are known to you, but not to us, on the Policy Date - unless they appeared in the public records
   * that result in no loss to you
   * that first affect your title after the Policy Date - this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks
4. Failure to pay value for your title.
5. Lack of a right:
   * to any land outside the area specifically described and referred to in Item 3 of Schedule A, or
   * in streets, alleys, or waterways that touch your land

   This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

11. EAGLE PROTECTION OWNER'S POLICY

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE - 2008
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE - 2008

Covered Risks 16 (Subdivision Law Violation). 18 (Building Permit). 19 (Zoning) and 21 (Encroachment of boundary walls or fences) are subject to Deductible Amounts and Maximum Dollar Limits of Liability

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building
   b. zoning
   c. land use
   d. improvements on the land
   e. land division
   f. environmental protection

   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

   This Exclusion does not limit the coverage described in Covered Risk 11 or 21

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows: Covered Risk 16, 18, 19 and 21, Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A. The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1% of Policy Amount or $5,000.00 (whichever is less)	$10,000.00
Covered Risk 18:	1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 19:	1% of Policy Amount or $5,000.00 (whichever is less)	$25,000.00
Covered Risk 21:	1% of Policy Amount or $2,500.00 (whichever is less)	$5,000.00

12. THIRD GENERATION EAGLE LOAN POLICY AMERICAN LAND TITLE ASSOCIATION EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (1/01/08)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to (i) the occupancy, use, or enjoyment of the Land; (ii) the character, dimensions, or location of any improvement erected on the Land; (iii) the subdivision of land; or(iv) environmental protection; or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b)Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

(c) resulting in no loss or damage to the Insured Claimant;
(d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
(e) resulting in loss or damage which would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.

13. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 2006

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;

   (ii) the character, dimensions, or location of any improvement erected on the Land;

   (iii) the subdivision of land; or

   (iv) environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters

   (a) created, suffered, assumed, or agreed to by the Insured Claimant;

   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

   (c) resulting in no loss or damage to the Insured Claimant;

   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or

   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors? rights laws, that the transaction creating the lien of the Insured Mortgage, is

   (a) a fraudulent conveyance or fraudulent transfer, or

   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

14. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 2006

WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 13 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

15. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 2006
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;

   (ii) the character, dimensions, or location of any improvement erected on the Land;

   (iii) the subdivision of land; or

   (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters

   (a) created, suffered, assumed, or agreed to by the Insured Claimant;

   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

   (c) resulting in no loss or damage to the Insured Claimant;

   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risks 9 and 10); or

   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors? rights laws, that the transaction vesting the Title as shown in Schedule A, is

   (a) a fraudulent conveyance or fraudulent transfer; or

   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

16. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 2006
WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 15 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

PRIVACY POLICY

We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information – particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our parent company, The First American Corporation, we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability

This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its *Fair Information Values*, a copy of which can be found on our website at www.firstam.com.

Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies, and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies, or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's *Fair Information Values*. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

City Directory Report. Three important enhancements have been made to the EDR City Directory Abstract:

1. *Executive Summary.* The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.

2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.

3. *Findings Listed by Location.* Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

Options for Selecting Adjoining Properties. Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

1. *You Select Addresses and EDR Selects Addresses.* Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.

2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.

3. *You Select Addresses.* Use this method for research based solely on the addresses you select or enter into the system.

4. *Hold City Directory Research Option.* If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

Questions? Contact your EDR representative at 800-352-0050. For more information about all of EDR's 2009 report and service enhancements, visit www.edrnet.com/2009enhancements

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

The EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXCEPTING THEREFROM THAT PORTION OF LOT 3 LYING WITHIN THE ABOVE DESCRIBED PARCEL 2.

RECITALS:
This conveyance is made pursuant to the powers conferred upon Trustee by that certain Deed of Trust, Assignment of Leases and Rents and Security Agreement (Including Fixture Filing)("Deed of Trust") dated 10-27-2004 and executed by PPD MERRITT I, LLC, A DELAWARE LIMITED LIABILITY COMPANY, as Trustor, and Recorded 11-01-2004, Instrument 2004487337 of official records of ALAMEDA County, California, and after fulfillment of the conditions specified in said Deed of Trust authorizing this conveyance.

Default occurred as set forth in a Notice of Default and Election to Sell which was recorded in the Office of the Recorder of said County, and such default still existed at the time of sale.

All requirements of law regarding the mailing of copies of notices or the publication of a copy of the Notice of Default or the personal delivery of the copy of the Notice of Default and the posting and publication of copies of the Notice of a Sale have been complied with.

Trustee, in compliance with said Notice of Trustee's Sale and in exercise of its powers under said Deed of Trust, sold the herein described property at public auction on 09-10-2009. Grantee, being the highest bidder at said sale, became the purchaser of said property for the amount bid being $3,617,700.00 in lawful money of the United States, or by credit bid if the Grantee was the beneficiary of said Deed of Trust at the time of said Trustee's Sale.

This sale was a unified sale of real and personal property. The undersigned further sells, transfers and conveys by quitclaim to grantee the personal property security and collateral under that certain Deed of Trust Security Agreement recorded 11-01-2004 as Instrument No. 2004487337 and any amendments or modifications thereto, as described in the Notice of Sale, and set forth below.

EXHIBIT "A"

REAL PROPERTY RIGHTS, APPURTENANCES AND IMPROVEMENTS. All present and future structures, buildings, improvements and fixtures of any kind on the real property described herein ("Real Property"), which is incorporated herein by this reference, as well as:

all appurtenances of the Real Property and all rights in and to any streets, roads or public places, easements or rights of way, relating to the Real Property, and all minerals, oil, gas and other hydrocarbon substances on or under the surface of the Real Property, as well as all development rights, permits, licenses, air rights, water and water rights relating to the Real Property, and all existing and future goods and tangible personal property located on the Real Property or wherever located and used or useable in connection with the use, operation or occupancy of the Real Property or in construction of any improvements thereon, including, but not limited to, apparatus, equipment and appliances used to supply air cooling, air conditioning, heat, gas, water, light, power, refrigeration, ventilation, laundry, drying, dishwashing, garbage disposal, waste removal, recreation or other services on the Real Property; and

all elevators, escalators, and related machinery and equipment, fire prevention and extinguishing apparatus, security and access control apparatus, partitions, ducts, compressors, plumbing, ovens, refrigerators, dishwashers, disposals, washers, dryers, awnings, storm windows, storm doors, screens, blinds, shades, curtains and curtain rods, mirrors, cabinets, paneling, rugs, attached floor coverings, furniture, pictures, antennas, pools and spas and pool and spa operation and maintenance equipment and apparatus; and

all trees and plants located on the Real Property, and all renewals or replacements thereof or articles in substitution thereof; it being intended and agreed that all such items will be conclusively considered to be part of the Real Property, whether or not attached or affixed to the Real Property ("Improvements").

COLLATERAL. All right, title and interest in and to the following described property and any and all products and proceeds thereof, now owned or hereafter acquired (sometimes all of such being collectively referred to herein as the "Collateral"):

General Intangibles. All general intangibles relating to design, development, operation, management and use of the Real Property and construction of the Improvements, including, but not limited to:

all names under which or by which the Real Property or the Improvements may at any time be operated or known, all rights to carry on business under any such names or any variants thereof, and all goodwill in any way relating to the Real Property;

all permits, licenses, authorizations, variances, land use entitlements, approvals and consents issued or obtained in connection with the construction, maintenance or operation of the Improvements;

all permits, licenses, approvals, consents, authorizations, franchises and agreements issued or obtained in connection with the use, occupancy or operation of the Real Property;

all rights as a declarant (or its equivalent) under any covenants, conditions and restrictions or other matters of record affecting the Real Property;

all materials prepared for filing or filed with any governmental agency;

all rights under any contract in connection with the development, design, use, operation, management and construction of the Real Property and/or the Improvements; and

all books and records prepared and kept in connection with the acquisition, construction, operation and occupancy of the Real Property and the Improvements;

Contracts. All construction, service, management, engineering, consulting, leasing, architectural, design, landscape and other similar contracts of any nature, as such may be modified, amended or supplemented from time to time, concerning the design, construction, management, operation, occupancy, use, and/or disposition of any portion of or all of the Real Property;

Plans and Reports. All architectural, design and engineering drawings, plans, specifications, working drawings, shop drawings, general conditions, addenda, soil tests and reports, feasibility studies, appraisals,

engineering reports, environmental reports and similar materials relating to any portion of or all of the Real Property and/or the Improvements and all modifications, supplements and amendments thereto;

Sureties. All payment and performance bonds or guarantees, and any and all modifications and extensions thereof relating to the Real Property and/or the Improvements;

Payments. All reserves, deferred payments, deposits, refunds, cost savings, letters of credit and payments of any kind relating to the construction, design, development, operation, occupancy, use and disposition of all or any portion of the Real Property and/or the Improvements, including, without limitation, any property tax rebates now owing or hereafter payable;

Loan Proceeds. All proceeds of the loan secured hereby;

Claims. All proceeds and any claims arising on account of any damage to or taking of the Real Property and/or the Improvements or any part thereof, and all causes of action and recoveries for any loss or diminution in the value of the Real Property and/or the Improvements;

Insurance. All policies of, and proceeds resulting from, insurance relating to the Real Property, Improvements or any of the Collateral, and any and all riders, amendments, renewals, supplements or extensions thereof, and all proceeds thereof;

Deposits. All deposits made with or other security given to utility companies with respect to the Real Property and/or the Improvements, and all advance payments of insurance premiums made with respect thereto and claims or demands relating to insurance and all deposit accounts wherever located;

Stock. All shares of stock or other evidence of ownership of any part of the Real Property that are owned in common with others, including all water stock relating to the Real Property, if any, and all documents or rights of membership in any owners' or members' association or similar group having responsibility for managing or operating any part of the Real Property and/or the Improvements;

Sale Contracts. All sales contracts, escrow agreements and broker's agreements concerning the sale of any or all of the Real Property and/or the Improvements, and all amendments thereto; and

Income. All income, rents, revenues, issues, deposits, receipts, profits and proceeds, and accounts receivable generated from the use and operation, of the Real Property, the Improvements and the Collateral to which Trustor may be entitled, whether now due, past due or to become due including, without limiting the above items, all "Goods", "Accounts", "Documents", "Instruments", "Money", "Chattel Paper" and "General Intangibles", as those terms are defined in the California Commercial Code from time to time in effect.

Certified Sanborn® Map Report Enhancements for 2009

The accompanying Certified Sanborn Map Report reflects a number of enhancements that make it easier for you to review these historical maps. EDR has digitally joined together the more than one million fire insurance maps from the Sanborn Library collection so that your target property is centered, making it easier for you to review adjoining properties. Here is a list of the new features:

· Your target property is centered on each map. You can quickly locate your target property and view adjoining properties. Plus, adjoining properties are included more often, reducing your need to refer to additional maps.

· All maps are now displayed at a uniform scale. This makes it easier for you to view changes to the property over time.

· We've increased coverage by adding thousands of new maps from 40 cities for years 1994-2007.

· A new Map Key and Sheet Thumbnails let you reference sheet numbers, year and volume of original Sanborn Map panels used for this report.

For more information about the new enhancements to the Certified Sanborn Map Report, contact your EDR representative at 800-352-0050.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2330 WEBSTER STREEET
OAKLAND, CA 94612

COORDINATES

Latitude (North):	37.812400 - 37° 48' 44.6''
Longitude (West):	122.264600 - 122° 15' 52.6''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	564732.3
UTM Y (Meters):	4185050.2
Elevation:	25 ft. above sea level

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

Federal CERCLIS list

CERCLIS ---------- Comprehensive Environmental Response, Compensation, and Liability Information System

Federal CERCLIS NFRAP site List

CERC-NFRAP ---------- CERCLIS No Further Remedial Action Planned

Federal RCRA CORRACTS facilities list

CORRACTS ---------- Corrective Action Report

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF ---------- RCRA - Transporters, Storage and Disposal

Federal RCRA generators list

RCRA-CESQG ---------- RCRA - Conditionally Exempt Small Quantity Generator

Federal institutional controls / engineering controls registries

US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROL ---------- Sites with Institutional Controls

Federal ERNS list

ERNS ---------- Emergency Response Notification System

State and tribal landfill and/or solid waste disposal site lists

SWF/LF ---------- Solid Waste Information System

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

INDIAN LUST ---- Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

AST ---- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---- Underground Storage Tanks on Indian Land

State and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing
VCP ---- Voluntary Cleanup Program Properties

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---- Open Dump Inventory
SWRCY ---- Recycler Database
HAULERS ---- Registered Waste Tire Haulers Listing
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands

Local Lists of Hazardous waste / Contaminated Sites

US CDL ---- Clandestine Drug Labs
SCH ---- School Property Evaluation Program
Toxic Pits ---- Toxic Pits Cleanup Act Sites
CDL ---- Clandestine Drug Labs
US HIST CDL ---- National Clandestine Laboratory Register

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants	EDR Proprietary Manufactured Gas Plants

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WHOLE FOODS CONSTRUCTION SITE	***230 BAY PLACE***	***E 1/8 - 1/4 (0.179 mi.)***	***S84***	***87***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 17 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 11/09/2009 has revealed that there are 3 RESPONSE sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/09/2009 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 11/12/2009 has revealed that there are 43 LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there are 3 RCRA-NonGen sites within approximately 0.25 miles of the target property.

Notify 65: Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data come from the State Water Resources Control Board's Proposition 65 database.

A review of the Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there are 14 Notify 65 sites within approximately 1 mile of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 53 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there are 15 EDR Historical Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Threat to Water Quality:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

POTW:	Not reported
Treat To Water:	Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect:	ndwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Two USTs were removed in 1988 and a third was removed in 1994. Several subsurface investigations, including in-situ remediation were conducted at the site between 1993 and 2004. In 2005, a remedial excavation was conducted at the site and the property was redeveloped. Replacement monitoring wells have been installed and post-remedial monitoring is currently underway.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOC Case Number: RO0000199
File Location: Stored electronically as an E-file
Potential Media Affect: ndwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Three USTs removed in December 1989. Following UST removals, borings, which detected free product, were installed at the site. Additional site investigations were conducted in 1992. An SVE system operated from October 1996 to March 1998. In November 2004, DPE was proposed at the site, which was approved in March 2006. Corrective action is pending, but not yet implemented.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

INST ID: 61285
Facility Name: Oakland Area Hospital Site
City: OAKLAND
State: CA
EPA Region: 9
County: ALAMEDA
Congressional District: 09
US Army District: Sacramento District (SPK)
Fiscal Year: 2008
Telephone: 916-557-7461
NPL Status: Not Listed
RAB: Not reported
CTC: 918.7
Current Owner: PRIVATE

FUDS Description Details:

The 4.259-acre site is located in Alameda County, CA within the city of Oakland. The Hotel Oakland (former Army Hospital building) has been renovated several times since Department of Defense (DoD) activity was terminated. Current owners of the assoc
ciated parcels include Hotel Oakland Associates, ICH Associates, and four private owners.

FUDS History Details:

In 1943, the U.S. acquired 12 leases for a total of 4.259 acres. The site was used as a station hospital by the U.S. Army Medical Corps. In 1946, 1.377 acres were transferred to the Veterans Administration

OAKLAND AREA HOSPITAL SITE (Continued) **1007211913**

(VA). In 1947, the remaining acres were tran
nsferred to the VA. No potential hazards have been identified at this site.

FUDS Current Program Details:

The site consists of 2,843 acres known as Poorman Flexible Gunnery Range. It is located 5 miles southeast of McHenry, Mississippi. The site was used as a gunnery range. Gun mounts and target mounts were the only items constructed. This property is su
uspected to contain military munitions and explosives of concern and therefore may present an explosive hazard.

FUDS Future Program Details:

The site consists of 2,843 acres known as Poorman Flexible Gunnery Range. It is located 5 miles southeast of McHenry, Mississippi. The site was used as a gunnery range. Gun mounts and target mounts were the only items constructed. This property is su
uspected to contain military munitions and explosives of concern and therefore may present an explosive hazard.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/01/2009
Date Data Arrived at EDR: 10/14/2009

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/01/2009

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 11/12/2008

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/12/2008

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/01/2009
Date Data Arrived at EDR: 10/09/2009
Date Made Active in Reports: 11/09/2009
Number of Days to Update: 31

Source: Environmental Protection Agency
Telephone: 703-603-0695
Last EDR Contact: 12/10/2009
Next Scheduled EDR Contact: 03/29/2010
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/01/2009
Date Data Arrived at EDR: 10/09/2009
Date Made Active in Reports: 11/09/2009

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 08/31/2009
Date Data Arrived at EDR: 09/17/2009
Date Made Active in Reports: 11/09/2009
Number of Days to Update: 53

Source: National Response Center, United States Coast Guard
Telephone: 202-267-2180
Last EDR Contact: 10/06/2009
Next Scheduled EDR Contact: 01/18/2010
Data Release Frequency: Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 11/09/2009
Date Data Arrived at EDR: 11/10/2009
Date Made Active in Reports: 12/04/2009
Number of Days to Update: 24

Source: Department of Toxic Substances Control
Telephone: 916-323-3400

Next Scheduled EDR Contact: 02/22/2010
Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 11/09/2009

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/01/2009

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009
Date Made Active in Reports: 09/11/2009

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	1980

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

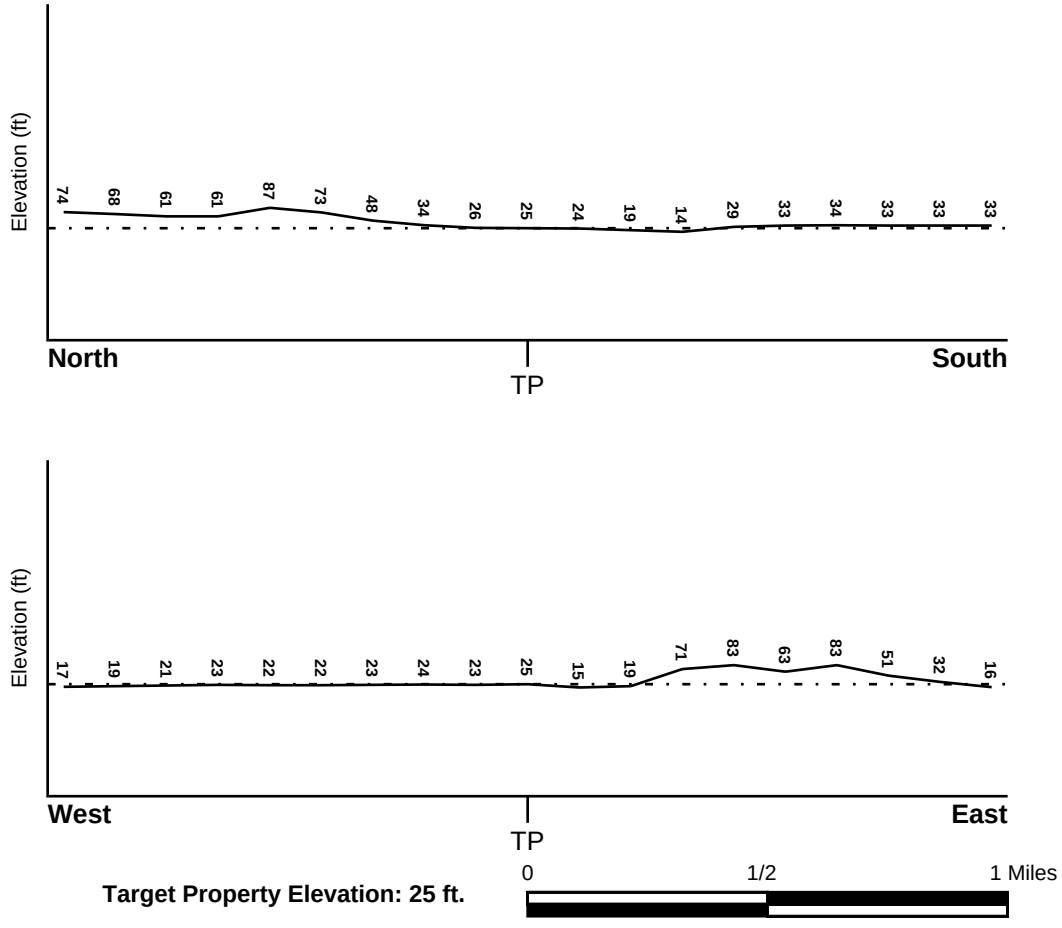
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 25 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
ALAMEDA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0650480015B

Additional Panels in search area: 0650480020B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OAKLAND WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	Urban land
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Partially hydric	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name:	Tierra
Soil Surface Texture:	loam
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Moderately well drained
Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	High
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Oakland, CA 94612

Chad Schwartz
PO Box 418172,
Sacramento, CA 95841

Subject: Oakland Tribune, 2302 Valdez Street, Oakland,CA, removal of one (1) 8,000 gallon gasoline and one (1) 750 gallon waste oil underground fuel storage tank

Dear Mr. Gomban & Mr. Schwartz:

This letter confirms the completion of a site investigation and remedial action for the underground storage tank formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank are greatly appreciated.

Based upon the available information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact Brian P. Oliva, at (510) 567-6737 if you have any questions regarding this matter.

Sincerely,

Mee Ling Tung
Director of Environmental Health Services

Re: Fuel Leak Site Case Closure at Oakland Tribune Building, 2302 Valdez St., Oakland, CA 94612

Dear Mr. Gomban & Mr. Schwartz:

This letter transmits the enclosed underground storage tank (UST) case closure letter in accordance with Chapter 6.75 (Article 4, Section 25299.37[h]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, the Alameda County Environmental Protection Division is required to use this case closure letter for all UST leak sites. We are also transmitting to you the enclosed case closure summary. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed.

SITE INVESTIGATION AND CLEANUP SUMMARY

Please be advised that the following condition(s) exist at the site:

1) The final level(s) of contamination consists of 655 parts per Billion of TPH(g) and 630, 49, 21 130 parts per billion (ppb) respectively, of BTEX.

2) If a change in land use is proposed or excavation of soils is planned at this site, the an evaluation of risk from exposure to contaminated soil and groundwater must be made.

If you have any questions, please contact this office at (510) 567-6737.

Sincerely,

Brian P Oliva

Brian P. Oliva, REHS, REA,
Hazardous Materials Specialist

[1] "Before" results were revealed in soil samples collected in 02/89 during removal of USTs and the subsequent sampling.
[2] "After" results were revealed in soil samples collected on 08/88 and 08/89 during soil borings and monitoring well installation.
[3] "Before" results were revealed in groundwater samples collected in 08/89 from MW-5 and on 01/18/96, from MW-1
4 "After" results were revealed in the final sampling of well MW-1 on 02/11/98

CASE CLOSURE SUMMARY
Leaking Underground Fuel Storage Tank Program

Comments (Depth of Remediation Etc.,)

The Oakland Tribune utilized the site for a maintenance garage beginning in 1943 and remained there until about 1986. The USTs, both gasoline and the waste oil tanks were apparently present prior to 1943 (See figure 1).

The two USTs were removed by Clayton Environmental Services in February 1988. Soils samples collected beneath removed USTs showed elevated levels of gasoline and heavy hydrocarbons. Based on these results (see attached figures) the UST excavation cavity was over-excavated down to about 18 feet bgs.

In August, 1988, three monitoring wells were installed by Clayton Environmental, indicating groundwater impact from the site. One year later, in September, 1989, eight soil borings were advanced as well as four additional monitoring wells (MW-4 through MW-7). In August 1990, two more monitoring wells were installed (MW-8 & MW-9) Soils samples from each boring to 11 feet bgs, did not reveal significant levels of TPH-G or BTEX.

In January of 1996, the nine previously installed wells were purged and sampled annually for the next three years (see attached tables).

In light of the levels of contamination encountered in the groundwater, a *Risk-Base Corrective Action* was undertaken for the site. The possible complex exposure pathways for the site include (1) inhalation of hydrocarbons vapors via subsurface soil and groundwater volatilization to both outdoor air and enclosed buildings; and (2) Ingestion of hydrocarbons in groundwater resulting from dissolved plume migration and from hydrocarbons in subsurface soil leaching to groundwater. Calculations show that representative constituent concentrations in subsurface soils and groundwater are below calculated site specific target cleanup levels calculated for the site, therefore, residual contamination does not pose a risk to human health.

See section VII, additional comments...

IV. Closure

Does completed corrective action protect existing beneficial uses per the
Regional Board Basin Plan? **Undetermined**
Does the completed corrective action protect potential beneficial uses per the
Regional Board Basin Plan? **Undetermined**
Does corrective action protect public health for current land use? **Yes**
Site management requirements: **Site health and safety plan requires if excavation/trenching is proposed in the vicinity of the former USTs.**
Should corrective action be reviewed if land use changes? **Yes**
Monitoring wells on site? **Nine (9)** Monitoring well decommissioned? **None**
List enforcement actions taken: **None**
List enforcement actions rescinded: **N/A**

VI. ADDITIONAL COMMENTS, DATA, ETC.

Case closure is warranted for the site as a "Low-Risk Groundwater Case" for the following reasons.

a) The source has been sufficiently removed or has been remediated.

Laboratory analysis of verification soil samples collected from the site indicate sufficiently low numbers in the area of the former gasoline and waste oil tanks. A "Risked Based Site Assessment" indicated the site is in all probability, safe, regarding public health.

CASE CLSOURE SUMMARY
Leaking Underground Fuel Storage Tank Program

VII. Additional Comments Continued...

b) The site has been adequately characterized.

Laboratory analysis of soil and groundwater samples collected during site investigations document that the previous release is small in extent and appears to be limited to soils which have come in contact with ground water in the vicinity of MW-1.

c) The dissolve hydrocarbon plume appears to be stable and has is not migrating.

Petroleum hydrocarbons were detected in the groundwater samples collected in MW-1, during the sampling events from 1996-1998. Laboratory analysis of groundwater samples collected from the down-gradient wells MW-8 and MW-9, revealed non-detectable concentrations of TPH-G and BTEX. The petroleum hydrocarbon contamination should continue to naturally degrade over time.

d) No water wells, deeper water wells, surface water or other sensitive receptors are likely to be impacted.

e) The site presents no significant risk to human health or the environment.

Laboratory analysis of soil and groundwater samples collected during the groundwater monitoring well installation and subsequent UST removals, and the subsequent investigations revealed non-detectable concentrations of benzene (with the exception of MW-1, and MW-4).

Groundwater analytical results from previous investigations are summarized in Tables 3 and 4 (see Figure 5). Table 3 summarizes groundwater analytical results for TPH as Diesel (TPH-D), TPH as Motor Oil (TPH-MO), TPH-G, BTEX, and Methyl-t-butyl Ether (MTBE). Note that Table 3 also contains groundwater analytical results for groundwater samples collected from MW-1, MW-2, MW-4, and MW-9 on February 11, 1998. These samples were collected with a clean disposable bailer, without prior purging of the wells. The laboratory data report for this sampling is contained in Appendix B. Table 4 summarizes detected halogenated volatile organic compounds in groundwater.

1,1-DCA - 1,1-Dichloroethane

Based on our review and interpretation of available site data, we draw the following conclusions about the project site:

- **Subsurface soils consist of a low permeability clay layer, underlain by more permeable sands and gravels below about 16 feet in depth.** Well borings and investigative soil borings encountered clays, silty clays, sandy clays, and gravely clays down to about 16 feet below grade. Soils beneath about 16 feet in depth consist primarily of clayey sands and gravels. Dames & Moore conducted single well slug tests on wells MW-4 through MW-7 in August 1989 using the Bower and Rice method. Calculated hydraulic conductivities in the four wells, which are all screened from about ten feet to 25 feet in depth, ranged from 2.41×10^{-5} to 2.68×10^{-4}, with an average hydraulic conductivity of 1.08×10^{-4}.

- **Subsurface soils are not significantly impacted by waste oil range hydrocarbons.** Waste oil range hydrocarbons have been encountered in three areas of the site: (1) Adjacent to a former floor sump located in the northeast corner of the site building; (2) Adjacent to the assumed inlet to the former waste oil UST, located adjacent to MW-1; and (3) In soil samples from MW-2, located on the south side of the project site building. However, soil analytical results from borings located downgradient (south) from these locations indicates that these waste oil-impacted soils are very localized and do not represent a significant soil impact.

- **Subsurface soils are gasoline impacted at approximate groundwater depth (10 to 15 feet in depth), extending south away from the former USTs.** Soil analytical results from samples at approximate groundwater depth show TPH-G results ranging between nondetect to 560 milligrams per kilogram. Benzene concentrations in these soil samples tend to be nondetectable at increased distance away from the UST and floor sump source areas.

- **Groundwater is not significantly impacted by waste oil range hydrocarbons or identified solvents.** Groundwater analytical results show low levels of diesel and motor oil range hydrocarbons immediately adjacent to source areas, but not extending

DESCRIPTION

CONCRETE FLOOR

BROWN SANDY SILTY CLAY with small pockets of light brown silty clay; trace iron oxide staining; (slightly moist) (stiff)

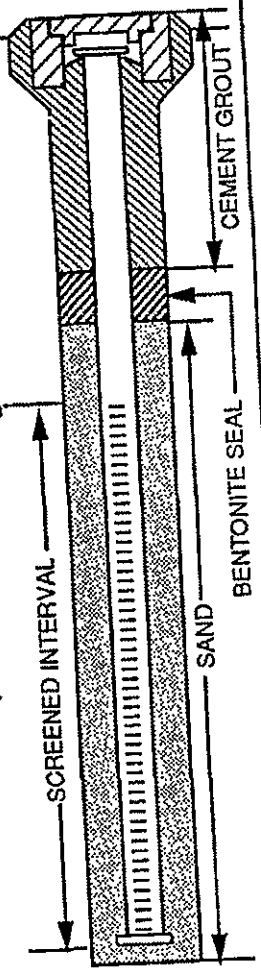
Grades with black mottling (moist)

Grades light brown with silty clayey sand lenses and trace gravel up to 1cm in diameter; iron oxide nodules (slightly moist)

BROWNISH AND GREENISH GRAY MOTTLED SAND with slight odor (moist) (medium dense)

BROWN TO LIGHT BROWN SANDY CLAY with orange mottling; some gravel up to 7cm in diameter (moist) (stiff to medium stiff)

Grades with large amount of angular gravel



NOTES:

1. Boring completed at a depth of 26.5 feet on 8/8/89.
2. 4-inch PVC observation well installed to a depth of 25.5 feet; screened interval from 10.0 to 25.0 feet.
3. Sampling resistance is measured in blows per foot required to drive the sampler 12 inches with a 140 lb. hammer falling 30 inches after sampler has been seated 6 inches.

Mr. Richard Belyea
Vice President, Environmental Risk Management
4900 Rivergrade Road,
Irwindale, CA - 91706

Ref: Labor Temple Site, Webster street, Oakland, CA

Dear Mr. Belyea:

I am in receipt of the Phase II investigation report, dated April 22, 1996 prepared by Dames and Moore for the above referenced site. In order to offset the cost of staff time to provide oversight and to ensure closure , a deposit of $1500.00 will be required. This deposit is authorized by Alameda County ordinance code section 3-141.6 to cover expenses incurred by county personnel for their oversight duties. Records are maintained of the time County employees commit to a project and the deposit will be debited at the rate of $90.00 per hour for any time dedicated to your project. Any money remaining in your account at the end of the project will be refunded and additional monies may be needed if the project exhausts the fund.

Please submit a check payable to "Treasurer, County of Alameda" with the words "Site Mitigation" written on the check for proper credit. Also, please make sure to include the complete address of the site for which the deposit- refund account is being established.

If you have any questions, you may reach me at (510) 567-6764.

Sincerely,

Madhulla Logan

Re: Labor Temple Parking Lot, 2330 Webster St, Oakland, CA-94612

Dear Mr. Belyea and Mr. Stark:

This Department is in receipt of a Risk Evaluation document, dated July 29, 1996 prepared by Dames and Moore for the above referenced site. In response to a request for closure, all pertinent documents submitted to this Department have been reviewed and this Department, in conjunction with the San Francisco Regional Water Quality Control Board, has evaluated the site for closure.

The risk based evaluation of chemicals detected in the groundwater at the referenced site indicate that the concentrations present in the groundwater do not pose a significant threat to on-site personnel. Based upon the available information, including current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action is required. However, if in the future, buildings or other structures are constructed on this site which could result in more significant exposures, then appropriate worker protection requirements should be developed and implemented. In addition, the groundwater cannot be used as a drinking water source.

If you have any questions, you may reach me at (510) 567-6764.

Sincerely,
Madhulla Logan

Mr. Peter Cossavella, Vice President
Pacific Properties and Development LLC
20408 Amapola Avenue
Orange, CA 92869

RE: Cost Estimate for the excavation of the Labor Temple Parking Lot, located at 2330 Webster Street, Oakland, Alameda County, California.

Dear Mr. Cossavella;

In response to your request, I have developed a cost estimate to excavate and dispose of the top fifteen feet of the 1.42 acre parcel of land at 2330 Webster Street in Oakland, California. Please consider the following assumptions as an integral part of the cost estimate.

ASSUMPTIONS

1. The costs for excavation permits are not considered in this estimate.
2. The cost for shoring the walls of the excavation is not considered in this estimate.
3. The costs for project design and project management are not considered in this estimate.
4. The cost to scrape 62,006 square feet of asphalt pavement up and transport the spoil to a recycler is $0.50/square foot or 62,006 square feet x $0.50/square foot= $31,003.
5. There is approximately 11,550 square feet of abandoned, steel reinforced concrete building slabs on the property. The cost to crush 11,550 of concrete and remove the steel reinforcing rods is $0.90/sf or $10,395.
6. The calculations are based on excavating 34,448 cubic yards of soil (62,006 square feet x 15 feet = 930,090 cubic feet or 34,448 cubic yards).
7. The ground water level at the subject property is approximately fifteen feet deep; therefore, groundwater dewatering will be considered separately.
8. The most contaminated soil encountered on the property is Class 2 cover soil. The cost to consign Class 2 fill in a licensed landfill is $20/ton or $30/cubic yard.
9. The cost to consign clean fill to a sanitary landfill is $8/cubic yard.
10. The cost to excavate and transport excavate fill from the site to a landfill is $14/cubic yard.
11. Waste profile analyses must be conducted on every 2,000 cubic yards of soil excavated from the property. The cost for the four point waste composite sampling per 2,000 cubic yards is $1,400.
12. The removal costs for an unregistered, underground storage tank and the associated fuel delivery lines is $5,000 @.

3316 Oak Grove Avenue, Suite 200, Dallas, TX 75204 · tel (214) 871-9200 · fax (214) 871-9217 · toll free (888) 578-2755

THE EXCAVATION ESTIMATE

NO CONTAMINATED SOIL CASE

NUMBER	DESCRIPTION	UNIT PRICE	UNITS	EXTENDED COST
1.	Remove all asphalt pavements and consign the spoil to a recycler.	$0.60/sf	62,006	$31,003.
2.	Remove the abandoned concrete building foundations from the property.	$0.90/sf	11,550	10,395.
3.	Excavate and transport 34,448 cubic yards of soil	$14/cu. yd.	34,448	482,272.
4.	Waste profile analyses on each 2,000 cubic yards of excavated soil	$1,400. @	18	25,200.
5.	Sanitary waste dump consignment fee for clean fill	$8./cu. yd.	34,448	275,584.
6.	Hazardous waste landfill consignment fee for Class 2 cover soil.	$30/cu. yd.	0	0.0
7.	Removal of unregistered underground storage tank	$5,000@	0	0.0
8.	Removal of two unregistered underground storage tanks	$5,000@	0	0.0
OPTIMISTIC ESTIMATED COSTS				**$824,454.**

MODERATE CONTAMINATION ENCOUNTERED

NUMBER	DESCRIPTION	UNIT PRICE	UNITS	EXTENDED COST
1.	Remove all asphalt pavements and consign the spoil to a recycler.	$0.60/sf	62,006	$31,003.
2.	Remove the abandoned concrete building foundations from the property.	$0.90/sf	11,550	10,395.
3.	Excavate and transport 34,448 cubic yards of soil	$14/cu. yd.	34,448	482,272.
4.	Waste profile analyses on each 2,000 cubic yards of excavated soil	$1,400. @	18	25,200.
5.	Sanitary waste dump consignment fee for clean fill	$8./cu. yd.	22,965	275,584.
6.	Hazardous waste landfill consignment fee for Class 2 cover soil.	$30/cu. yd.	11,483	344,490.
7.	Removal of unregistered underground storage tank	$5,000@	1	5,000.
8.	Removal of two unregistered underground storage tanks	$5,000@	0	0.0
BEST GUESS COST ESTIMATE				**$1,173,944.**

EXTENSIVE CONTAMINATION ENCOUNTERED

NUMBER	DESCRIPTION	UNIT PRICE	UNITS	EXTENDED COST
1.	Remove all of the asphalt pavement and consign the spoil to a recycler.	$0.60/sf	62,006	$31,003.
2.	Remove the abandoned concrete building foundations from the property.	$0.90/sf	11,550	10,395.
3.	Excavate and transport 34,448 cubic yards of soil	$14/cu. yd.	34,448	482,272.
4.	Waste profile analyses on each 2,000 cubic yards of excavated soil	$1,400. @	18	25,200.
5.	Sanitary waste dump consignment fee for clean fill	$8./cu. yd.	3,445	27,558.
6.	Hazardous waste landfill consignment fee for Class 2 cover soil.	$30/cu. yd.	31,003	930,096
7.	Removal of unregistered underground storage tank	$5,000@	1	0.0.
8.	Removal of two unregistered underground storage tanks	$5,000@	2	10,000
CONSERVATIVE COST ESTIMATE				**$1,516,524.**

PROBABILITY ASSIGNMENTS

Each of the cost estimates, developed above, is assigned a probability of occurrence. The probability of occurrence for each event is multiplied by the respective cost estimate to compute the best estimate for the site excavation. The calculations are presented in Table 2.

TABLE 2
PROBABLE COST ESTIMATE CALCULATION

ESTIMATE	PROBABILITY OF OCCURANCE	COST ESTIMATE	PROBABLE COST ESTIMATE
Conservative Cost Estimate	0.3	$1,516,524.	$454,957.
Best Guess Cost Estimate	0.6	$1,173,944.	$704,366.
Optimistic Cost Estimate	0.1	$824,454.	$82,445.
PROBABLE COST ESTIMATE			**$1,241,769.**

Based on this probability treatment of three potential cost estimates and their assigned likelihoods of occurrence, the Probable Cost Estimate to excavate the subject property is $1,241,769.

GROUNDWATER REMOVAL

In the fall of 1995, groundwater was encountered at depths between thirteen and nineteen feet. The fall is usually characterized by low amounts of rainfall and subsequently, the groundwater is at its lowest level. Consequently, groundwater may be encountered during the excavation of this site to the planned depth of fifteen feet. Dewatering of the excavation to permit the installation of the building foundation may be required.

Since the groundwater at the subject property was shown to be contaminated with low concentrations of chlorinated hydrocarbons and petroleum hydrocarbons, the groundwater, if encountered, will likely require treatment prior to its ultimate disposal into the East Bay Municipal Utility District sanitary sewer system. Low concentrations of these organic contaminants can best be removed with a fluidized bed of activated charcoal.

The cost of dewatering is dependent on the flow rate (gallons/hour) and time period over which groundwater will be extracted from the site. Without these data, a firm cost estimate can not be developed. However, based on general expectations of other developers in Oakland, the following conservative estimate to decontaminate the groundwater and dewater the subject property has been prepared.

ASSUMPTIONS

1. Groundwater will be encountered at depths greater than thirteen feet below grade.
2. The groundwater flow rate is less than 30-gallons per minute (gpm).
3. Groundwater contaminants include low concentrations of chlorinated hydrocarbons (degreasing solvents, dry cleaning fluid, etc.).
4. The contaminants can be removed from the groundwater stream by adsorption on activated carbon. (Activated carbon fluidized bed filter system)
5. The treated groundwater can be discharged into the EBMUD sanitary sewer system for a nominal fee.
6. The dewatering operation will generate less than 1,000,000 gallons (252,000 gallons per week).
7. The fluidized bed will not require replacement over the term of the dewatering process.
8. The construction of drainage fields and sumps, a part of the building construction, are not included in this estimate.

DEWATERING ESTIMATE

#	DESCRIPTION	UNIT PRICE	UNITS	EXTENDED COST
1.	Equipment mobilization and demobilization	$900.	2	$1,800.
2.	Labor (Install and Removal)	1,850.	Net	$1,850.
3.	Fuel surcharge	$180.	Net	$180.
4.	Rental on fluidized bed filter (activated carbon media)	$10,225.	Net	$10,225.
5.	Permit fee to EBMUD for 1M gallons	$650.	Net	$650.
6.	Groundwater analyses • VOCs • RCRA Metals • Oil & Grease	 $149. @ $124. @ $65. @	 10 10 10	 $3,380.
7.	Discharge fee for groundwater	$0.02/gallon	1,000,000	$20,000.
8.	Project monitoring and sample collection	$400./day	28 days	$11,200.
DEWATERING COST ESTIMATE				**$49,285.**

In the event a refined estimate to dewater the excavated site is required, the following data must be obtained.

1. The depth to groundwater.
2. The flow rate of the groundwater on the site.
3. Characterization of the regulated, hazardous materials currently in the ground water.

Given the quantitative determinations of Items 1, 2, and 3, the need for dewatering and the probable disposition of any encountered groundwater can be specified. Therefore, the costs for addressing the ground water issues, if any, can be estimated.

Please contact me to discuss the methodology used to derive the estimates.

Sincerely,
AquaTerra Assessments

1.0 EXECUTIVE SUMMARY

1.1 Background

On Thursday, July 29, 2004, James W. Crawford of AquaTerra Assessments (AquaTerra) performed the on-site inspection for a Phase I Environmental Site Assessment (ESA) of the Labor Temple Parking Lot, located at 2330 Webster Street in the City of Oakland, Alameda County, California. The AquaTerra inspector met Mr. Tom Peterson during the on-site inspection..

The subject property consists of an irregularly-shaped tract of land containing approximately 1.42 acres of land, more particularly described as "Assessors parcels 008-0668-004 and 008-0668-009-07 Being a Portion of Block 2256 subdivision of Blocks 2256,2257, and 2258 of the Valdez Tract situated in the City of Oakland, Alameda County, California." The subject property is located at the southeast corner of 23rd Street and Valdez Street, in the Lake Merritt District of the Central Business District of Oakland. The subject property is located approximately 1.3 miles north of the Oakland Inner Harbor and two blocks west of Lake Merritt, a small lake within the City of Oakland city limits. The Oakland International Airport is located six miles south of the subject property. The Vicinity Map is shown as Figure I.

The southern boundary of the property is bounded by 23rd Street and the back of two buildings containing the 23rd Street Garage, and three small restaurants. The east side of the property is bounded by Valdez Street, across which are a parking garage, a parking lot, H O Auto Detail shop, and a small apartment. The northern boundary is bounded by buildings containing Creative Growth (an artist workshop), an apartment building, and a parking lot for Torchio's Body Shop. The west side of the property is bounded by Webster Street, across which are a parking lot and a multi-story parking garage. The Site Location Map is shown as Figure II.

The current improvements on the property consist of asphalt pavement containing 233 parking spaces, a concrete island containing a metal kiosk for the parking attendant, and perimeter chain link fencing. The property consists of approximately 1.42 acres of land. The Site Drawing is shown as Figure III.

A visual inspection of the perimeter and interior of the property was conducted.

1.2 Items Addressed in Report

The Environmental Site Assessment includes a review of state, and federal environmental databases for information concerning the subject property and neighboring properties, a review of the property's prior-use history, a visual inspection

for contamination, a review of the potential for asbestos-containing materials, lead-based paints, lead in drinking water and radon gas, a review of aerial photographs, a search for underground and aboveground storage tanks, and a search for PCB-containing electrical equipment.

1.3 Conclusions

AquaTerra Assessments has performed a Phase I *Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527 of the **Labor Temple Parking Lot** located at the southeast corner of 23rd Street and Valdez Street in the City of Oakland, Alameda County, California, the *property*. Any exceptions to, or deletions from this practice are described in the appropriate Sections of this report. **This assessment has revealed no evidence of *recognized environmental conditions* in connection with the *property* except for the following:**

- There is a 55-gallon drum of soil cuttings from a previous subsurface investigation stored on the Webster Street frontage of the property.
- A gasoline station occupied the central portion of the property from approximately 1969 to approximately 1979.
- The shallow soil and groundwater of the subject property has been contaminated with low concentrations of chlorinated hydrocarbons (likely off-site sources) and petroleum products (likely on-site sources).

1.4 Recommendations

AquaTerra Assessments recommends the 55-gallon drum of soil cuttings be properly removed from the subject property.

Because the first fifteen feet of soil on the subject property will be excavated as part of the planned redevelopment project, measures to detect contaminated soil and, if encountered, groundwater should be implemented. All contaminated soil and groundwater should be segregated, characterized, then properly consigned to licensed waste storage facilities.

In the event unregistered underground storage tanks are encountered during the excavation, proper notifications to regulatory agencies and subsequent tank removal actions should be implemented.

AquaTerra Assessments recommends no further investigations be conducted to determine the presence of hazardous substances or petroleum products on the subject property.

2.0 OBJECTIVES

The purpose of this Phase I Environmental Site Assessment is to determine the environmental condition of the property and comply with the due diligence property inspection requirements of the Innocent Landowner Defense under the Comprehensive Environmental Response, Compensation and Liability Act of 1980 and subsequent amendments. This report follows the procedures outlined in the ASTM Designation E 1527-00, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The scope of work for this Phase I Environmental Site Assessment consists of the following:

- Prior-Use History Review
- One Mile Area Reconnaissance
- Visual Inspection
- Review of the Potential for Contamination by Asbestos-Containing Building Materials, Lead-Based Paint, Lead in Water, and Radon Gas.
- Underground and Aboveground Storage Tank Search
- PCB Electrical Equipment Identification
- Environmental Database Review
- Review of Historical Aerial Photography
- Contact with Regulatory Agencies
- Review of the Local Geology, Soils, and Hydrogeology

It is not the purpose of the Environmental Site Assessment to determine the presence, degree, or extent of contamination, if any, but rather to determine the potential for contamination. Photographs of the subject property and surrounding areas have been taken during the on-site inspection as a means of documenting the findings discussed in this report. Copies of some of these photographs are included in Appendix B.

3.0 SITE OVERVIEW

3.1 Introduction

On Thursday, July 29, 2004, James W. Crawford of AquaTerra Assessments (AquaTerra) performed the on-site inspection for a Phase I Environmental Site Assessment (ESA) of the Labor Temple Parking Lot, located at 2330 Webster Street in the City of Oakland, Alameda County, California. The AquaTerra inspector met Mr. Tom Peterson during the on-site inspection..

3.2 Site Location

The subject property consists of an irregularly-shaped tract of land containing approximately 1.42 acres of land, more particularly described as "Assessors parcels 008-0668-004 and 008-0668-009-07 Being a Portion of Block 2256 subdivision of Blocks 2256,2257, and 2258 of the Valdez Tract situated in the City of Oakland, Alameda County, California." The subject property is located at the southeast corner of 23rd Street and Valdez Street, in the Lake Merritt District of the Central Business District of Oakland. The subject property is located approximately 1.3 miles north of the Oakland Inner Harbor and two blocks west of Lake Merritt, a small lake within the City of Oakland city limits. The Oakland International Airport is located six miles south of the subject property. The Vicinity Map is shown as Figure I.

The southern boundary of the property is bounded by 23rd Street and the back of two buildings containing the 23rd Street Garage, and three small restaurants. The east side of the property is bounded by Valdez Street, across which are a parking garage, a parking lot, H O Auto Detail shop, and a small apartment building. The northern boundary is bounded by buildings containing Creative Growth (an artist workshop), an apartment building, and a parking lot and Torchio's Body Shop. The west side of the property is bounded by Webster Street, across which are a parking lot and a multi-story parking garage. The Site Location Map is shown as Figure II.

3.3 Description of the Improvements

The current improvements on the property consist of asphalt pavement containing 233 parking spaces, a concrete island containing a metal kiosk for the parking attendant, and perimeter chain link fencing. The property consists of approximately 1.42 acres of land. The Site Drawing is shown as Figure III.

A visual inspection of the perimeter and interior of the property was conducted.

4.0 SITE BACK GROUND/OPERATING HISTORY

The following sources were used in an attempt to trace the past land use history of the subject property.

4.1 Current and Prior Ownership

A search for current and prior ownership was not included in the Scope of Work for this Report. However, information received from the Client indicates that the current owner is "Upper Lake Merritt, LLC, a Delaware limited liability company."

4.2 Review of Aerial Photographs

Aerial photographs for the years 1937, 1953, 1959, 1969, 1975, 1979, 1985, 1990, and 1994 were reviewed in an earlier Phase I Environmental Site Assessment[1] to identify potential environmental concerns on or near the subject property. The 1937, 1953, and 1959 showed several small commercial and residential buildings on the subject property. The 1969, 1975, and 1979 photographs show one small building centrally located on the property. The 1985, 1990, and 1994 aerial photographs depict the subject property as a paved parking lot, the current use. Copies of these aerial photographs were not included in the copy of the previous Versar Report provided to AquaTerra, and are therefore not included in this Report.

4.3 Historic Maps and City Directories

The previous Phase I Environmental Site Assessment, conducted by Versar, Inc. reported that Sanborn Fire Insurance Maps for the subject property were reviewed. The maps prepared for the years 1889, 1903, and 1911 show the subject property improved with isolated residential structures. The 1950, 1952, 1954, 1959, and 1962 maps show improvements to the property consisting of the Labor Temple, an auto supply warehouse, and a parking structure, in addition to small residential and commercial structures. The 1967 and 1970 maps depict a gasoline station constructed near the center of the property.

[1] Versar, Inc. *Phase I Environmental Site Assessment – Lake Merritt Tower Property and Valdez and Harrison Street Parking Lots, Oakland, CA. Project # 2971-010.* Dated October 3, 1995.

4.4 Previous Environmental Investigations

The October 1995 Phase I Environmental Site Assessment conducted by Versar, Inc. was reviewed for the historical uses of the property. Our Client and the current property owner, Upper Lake Merritt, LLC (Mr. Tom Peterson), authorized AquaTerra to rely on this archival information.

The November 1995 subsurface Investigation conducted by Versar, Inc.[2] was reviewed for the potential of subsurface contamination on the subject property. Versar, Inc. concluded that no impacted soil was noted except low concentrations of 1,2-dichlorobenzene in the northern and up-gradient boring #2. The origin of this contamination was presumed to be from off-site encroachment of contaminated groundwater. None of the identified contamination in the soil was attributable to previous uses of the subject property. Versar, Inc. recommended additional subsurface investigations in areas where auger refusal was encountered.

Versar, Inc. prepared and addendum to its subsurface investigation report that expanded the subsurface investigation in areas of probe refusal.[3] This addendum describes the installation of a 29' deep groundwater monitoring well on the south side of the property. Analysis of the groundwater sample from this well detected significant concentrations of carbon tetrachloride (430 µg/l), 1, 1-dichloroethene (22 µg/l), 1,4-dichlorobenzene (15 µg/l), and Total Petroleum Hydrocarbons Gasoline (TPH-G) (65 µg/l). Other chlorinated ethene and ethane compounds were also reported in this water sample.

These investigators also reported 1.3 µg/l of toluene in a groundwater sample collected from the monitor well installed in the center of the property. Versar, Inc. concluded that the source(s) of TPH-G and toluene were on-site, as the up gradient groundwater did not contain these materials.

These findings were evaluated by the Alameda County Health Care Services Agency and the San Francisco Regional Water Quality Board, who issued a No Further Action Letter for the incident on October 30, 1996.[4] The letter prohibits the use of the shallow groundwater for potable purposes.

Environmental reports that predate the Versar, Inc. investigations were cited in the respective Phase I Environmental Site Assessment and Subsurface Investigation reports. Versar, Inc. concluded their findings supported the earlier investigator's conclusions. No significant findings or conclusions developed by Versar, Inc. conflicted with the earlier reports.

5.0 LOCAL TOPOGRAPHY AND GEOLOGY

5.1 Local Topography

The subject property is located on a local plateau, which slopes downward toward Lake Merritt, located approximately 1/4 mile to the southeast, or toward Glen Echo Creek located approximately 1/4 mile east of the subject property. According to the U.S. Geological Survey (USGS) topographic map, (Oakland West, California Quadrangle, dated 1993) the elevation of the subject property is approximately 20 feet above Mean Sea Level (based on the National Geodetic Vertical Datum, NGVD). The Topographic Map is presented as Figure IV.

Onsite, surface water flows from northwest to southeast toward Valdez Street, subsequently entering the East Bay Municipal Utility District storm water collection system.

5.2 Soil and Subsurface Geological Characteristics

The subject property is located in the Pacific Border physiographic province, including the western third of Washington, Oregon, and California. The Pacific Border was formed by severely folded, faulted, commonly metamorphosed marine and continental sediments.

The native soils on the subject property consist of the Danville-Urban land complex. At the subject property and on surrounding areas, the native soils have been covered by pavements and buildings. During the construction process, the native soils are usually altered, mixed with imported soils, or partially removed. These areas of altered and covered soils are referred to as Urban Land by the U. S. Natural Resources Conservation Service.

The Danville soils are very deep, well-drained silty clay loam that formed in alluvium derived mainly from sedimentary rock.

Permeability of the Danville soil is slow, and there is a high shrink-swell potential. Runoff is slow, and the hazard of erosion is slight.

Subsurface Stratigraphy

Lithologic associations in Alameda County are divided into nine assemblages; I, II, and V - XI (Assemblages III and IV occur only in Contra Costa County). Assemblages are large, fault-bounded blocks that contain a unique stratigraphic sequence. The stratigraphic sequence differs from that of neighboring assemblages by containing

different rock units (e.g. the freshwater limestone in Assemblage VIII is missing from the other Assemblages), or by different stratigraphic relationship among similar rock units (e.g. the Orinda Formation overlies the Claremont Chertin Assemblage I, whereas in Assemblage VI three other formations totaling more than 500 meters thick lie between the Orinda and Claremont). These stratigraphic differences represent changes in depositional conditions in one or more large depositional basins. The current adjacent location of the different assemblages reflects the juxtaposition of different basins or parts of basins by large offsets along the faults that bound the assemblages.

In general, in Alameda County, the Tertiary strata rest with angular unconformity on two complexly deformed Mesozoic rock complexes. One of these Mesozoic complexes is made up of: the Coast Range ophiolite, which includes serpentinite, gabbro, diabase, and basalt; keratophyre; and overlying Great Valley sequence. Within this complex in the Berkeley and Hayward areas the Great Valley sequence rests unconformably on ophiolite and volcanic rocks in several places. This complex represents the accreted and deformed remnants of Jurassic oceanic crust, and overlying arc volcanic rocks and a thick sequence of turbidites.

The second Mesozoic complex is the Franciscan complex, which is composed of weakly to strongly metamorphosed graywacke, argillite, limestone, basalt, serpentinite, chert, and other rocks. The rocks of the Franciscan complex in Alameda County were probably Jurassic oceanic crust and pelagic deposits, overlain by Late Jurassic to Late Cretaceous turbidites. Although Franciscan rocks are dominantly little metamorphosed, high-pressure, low-temperature metamorphic minerals are common in the Franciscan complex, and the presence of high grade metamorphic blocks in sheared but relatively unmetamorphosed argillite matrix reflects the complicated history of the Franciscan. The complex was subducted beneath the Coast Range ophiolite during Cretaceous time. Because the Novato Quarry terrane forms the lowest in the stacked sequence of terranes in the Bay Area subduction took place, at least in part, after the Late Cretaceous deposition of the sandstone of the Novato Quarry terrane. Because of the subduction relationship, the contact between the two Mesozoic complexes is faulted throughout, and the Franciscan complex presumably underlies the entire county.

Tertiary rocks rest with angular unconformity on both Mesozoic complexes. In Assemblages IX and X, Tertiary rocks are on the Franciscan complex. The more usual situation is observed in all other assemblages, where Tertiary rocks overlie strata of the Great Valley sequence, although in most assemblages the contact is now faulted.

Three types of intrusive rocks have been mapped in Alameda County. One is a small stock of coarse-grained, crystalline granular, quartz diorite that intrudes the Coast Range ophiolite in the Cedar Mountain quadrangle. Another type occurs as small rhyolite plugs intruding Cretaceous and Tertiary strata in the Sunol area. The third type forms a large body of fine grained quartz diorite in the Oakland area. These rocks are not included in any assemblage because of their intrusive nature.

Structure

The faults of Alameda County are characterized by both strike-slip and dip-slip components of displacement. There are four major fault systems that display large right-lateral offsets: the Hayward, the Stonybrook-Palomares-Miller Creek-Moraga, the Calaveras, and the Greenville. These fault systems trend roughly N30W. Most of these fault systems include many fault strands in a broad (as much as 10 km wide) zone. Offset is distributed on the various faults in the zones, and the locus of fault movement associated with a fault zone has changed through geologic time. All of the fault systems have strands which have been active during Quaternary time and some, such as the Hayward, Calaveras, and Greenville, have generated historic earthquakes or display active creep. These fault systems also form most of the boundaries of the assemblages. The juxtaposition of rocks with different stratigraphic histories across these faults lends support to the idea of large offsets. Note, however, that the Hayward fault system does not form an assemblage boundary.

In addition to strike-slip faults, faults in Alameda County can be divided into three categories based on the fault-normal component of displacement and orientation. The first of these categories comprises transpressional faults within the major strike-slip fault zones. These faults trend roughly parallel to the strike-slip faults discussed above, but display a large component of thrust or reverse displacement. Examples of this type of fault are the Mission, Warm Springs, and Arroyo Aguague faults in the Hayward fault zone. The compressional component of deformation on these faults is caused by the small but important component of plate motion at right angles to the trend of the strike-slip fault zones, as well as fault-normal compression related to changes in trend of the strike-slip fault zone. The transpressional faults also have a component of strike-slip offset, although the amount of offset is for the most part undetermined.

The second category of fault consists of thrust and reverse faults that trend at high angle to the strike-slip fault zones (N60E-N60W). Examples of this type include the Verona and Williams faults. These faults reflect compression directed parallel to plate motion.

The third category of fault with a fault-normal component of offset in Alameda County comprises transtensional faults, or faults with oblique normal offset. These faults occur within the major strike-slip fault zones (trending about N30W). The best example of this type is the Chabot fault. The transtensional faults reflect deformation during a period (late Pliocene to early Pleistocene) when regional stress contained a small but significant fault-normal extensional component.

Both types of faults with compressional deformation underwent late Quaternary deformation, but the amount of seismic hazard that they represent remains to be determined. The transtensional faults, on the other hand, appear to have ceased moving for the most part by late Pleistocene time.

Folds in Alameda County can be divided into three categories based on axial trend and style of deformation. The first category includes tight folds and overturned folds with inclined axial planes whose axes trend obliquely to the major strike-slip fault zones (about N60W). These folds were probably caused by the same component of regional stress that formed the strike-slip faults and the thrust and reverse faults of the second category discussed above. These folds occur in the north-central part of the county, in the region between the Calaveras and Moraga-Miller Creek-Palomares faults.

The second category of fold contains tight, upright folds whose axes strike roughly parallel to the major strike-slip faults (about N30W). These folds were probably formed by a component of regional compression perpendicular to the strike-slip faults. For the most part, only synclines of this category are preserved, anticlines having been disrupted by faulting of the first category discussed above. Folding of this type is present in the western part of the county between the Hayward and Moraga-Miller Creek-Palomares-Stonybrook faults and on either side of the Calaveras fault in the south part of the county.

The third category of fold in Alameda County includes the broad anticline and related smaller folds of the Altamont anticline in the northeastern part of the county, east of the Greenville fault. This fold trends roughly parallel to the major strike-slip faults, and therefore are probably caused by regional compression perpendicular to the strike-slip faults, in a manner similar to that of the second category of folds.

Preserved folds in Alameda County for the most part formed in late Miocene or later time, as late Miocene strata are involved in the folds. Pre-late Miocene folding undoubtedly occurred, associated with subduction of the Franciscan complex beneath the Coast Range ophiolite and subsequent deformation associated with the unconformity at the base of the Tertiary sequence. These folds have been totally disrupted, being best preserved as homoclinal sequences of Cretaceous strata. The youngest folding must postdate the Pliocene and Pleistocene deposition of the Livermore gravels, as those strata are folded in at least one area. Late Pleistocene strata have not been observed to be folded, but are tilted and uplifted in several places in the west part of the county.

5.3 Subsurface Hydrogeological Characteristics

Alameda County lies within the area underlain by the Coastal Basins Aquifer System.

Introduction

The California coastal region has been subjected to intense tectonic forces for millions of years. Folding, faulting of marine sediments, and associated volcanism resulted in the formation of the Klamath and the Salmon Mountains in northern California and the Coast Ranges that extend along most of the California coast. Terrestrial, marine, and

volcanic rocks deposited in intermontane valleys compose the aquifers herein called the Coastal Basins aquifers. The California Department of Water Resources considers more than 100 coastal basins to be "significant" because of the amount of ground water potentially obtainable or the scarcity of surface-water sources in a basin. Nearly all of the large population centers in California are located in the coastal basins.

The climate along the coast of California is moderated by the Pacific Ocean and is essentially Mediterranean, characterized by cool winters and warm summers. Precipitation is seasonal and usually in the form of rain. The greatest amounts of precipitation fall during late autumn, winter, and early spring. Precipitation amounts are greatest in northern California and progressively decrease southward. Altitude also influences precipitation patterns; the greatest amounts of precipitation fall in the mountains. Potential annual evaporation in the valleys exceeds annual precipitation from San Francisco Bay southward. As a result, most unregulated rivers in southern California are dry in their lower reaches during the summer months.

The intermontane basins in the coastal mountains of California are structural troughs or depressions that parallel the coastline and formed as a result of folding and faulting. Most of the folds and faults trend northwestward and result from the deformation of older rocks by the intense pressures of colliding continental plates. The rocks that underlie the basins and form the surrounding mountains are primarily marine sediments and metamorphic and igneous rocks, all of which are of Mesozoic age but locally include rocks of Cenozoic age.

The basins are partly filled with unconsolidated and semi-consolidated marine sedimentary rocks that were deposited during periodic encroachment of the sea and with un-consolidated continental deposits that consist of weathered igneous and sedimentary rock material which was transported into the basins primarily by mountain streams. These marine sediments and continental deposits are tens of thousands of feet thick in some basins. In the basins just north of San Francisco Bay, permeable basalt and tuff compose a portion of the materials overlying the older consolidated rocks. In most basins, however, almost all of the permeable material consists of unconsolidated continental deposits, primarily sand and gravel.

Hydrogeologic Setting

In all the basins, most of the freshwater is contained in aquifers that consist of continental deposits of sand and gravel that might be interbedded with confining units of fine-grained material, such as silt and clay. The aquifers and confining units compose an aquifer system. Water enters a typical coastal-basin aquifer in several ways. Runoff from precipitation in the surrounding mountains infiltrates the permeable sediments of the valley floor either at the basin margins or through streambeds where the water table is lower than the water level in the stream. Precipitation that falls on the valley floor provides some direct recharge, but in the coastal basins, most of the precipitation evaporates or is transpired by plants. In a few basins that are hydraulically connected to other basins, water can enter an aquifer system as lateral subsurface flow from an

adjacent basin. Of these methods of recharge, runoff from the mountains and percolation through streambeds provide the largest amounts of water to the ground-water system.

Natural movement of water in the aquifers is generally parallel to the long axis of the basin because of impermeable rocks that commonly form a barrier between the basin and the sea. However, in a few coastal basins, most notably in the Los Angeles-Orange County coastal plain, the coastal barrier is absent, and the natural direction of flow is perpendicular to the long axis of the basin or from the inland mountains to the sea. Before major development, ground water in all the basins discharged directly into the ocean or into bays connected to the ocean. After development, however, most or all the ground water is withdrawn by wells in the basins.

Fresh Ground-Water Use And Management

During the early years of ground-water development in the coastal basins, from the 1850s to early 1900s, the principal use of water was for irrigated agriculture. Although agricultural ground-water use remains substantial, urbanization has gradually replaced most agricultural land in the larger basins and the greatest collective ground-water demand is now for public supply. The largest water users are cities and suburbs from San Francisco southward, but because of the unequal distribution of rainfall, most of the freshwater is in northern California. Accordingly, it has become necessary to regulate stream flow and import water into many coastal basins from the Sierra Nevada, the Colorado River, the Owens Valley, and northern California through an extensive system of aqueducts.

For many years, rapidly growing populations in several basins resulted in ground-water withdrawals that exceeded natural recharge on a long-term basis; this led to marked water-level declines. The consequences of these excessive withdrawals ranged from mild, such as increased pumping costs, to severe, such as land subsidence and seawater intrusion. Today (1995), ground water in the coastal basins of California is carefully managed. The current supply of water from all sources, including imported water, approximately balances demand. However, because the natural recharge to many basins, especially southward from the San Francisco Bay area, is far less than the volume of ground water currently (1995) withdrawn, increases in population will require either additional imports, more conservation, an increase in the amount of water now reclaimed, or a combination of all three. More than any other environmental factor, water availability will likely determine the size of the population these basins can support.

North San Francisco Bay Area Valleys

Among the Coast Ranges north of San Francisco Bay are several valleys underlain by aquifers from which moderate to large volumes of water are withdrawn. The Petaluma, the Sonoma, the Napa, and the Suisun-Fairfield Valleys drain into San Pablo Bay, and

the Santa Rosa Basin drains into the Russian River, which empties into the Pacific Ocean.

The north San Francisco Bay area valleys contain a mixture of urban and agricultural lands. Population growth since the 1970s has been rapid and urban areas have replaced much of what was formerly agricultural land. Nonetheless, agriculture remains important to the local economy. Orchard crops are a significant part of the total agricultural output but are being replaced in many areas by vineyards. Many formerly unplanted hillsides now grow wine grapes.

Ground-water supplies in the area are limited by local availability and, to a degree, by the quality of the water. Most of the water used in the area is surface water, much of which is either derived from the Russian River or imported from the Central Valley. Ground water, however, remains the primary source of supply for agriculture, stock watering, and domestic uses and is an important source for municipal supply.

The five drainage basins of the north San Francisco Bay area valleys are structural troughs filled to great depths with marine and continental sediments and volcanic deposits. The basins each have a flat to gently rolling valley floor formed primarily on alluvial fan deposits. The slope of the fan steepens near the foothills at the base of the surrounding mountains. Some streams that drain mountain valleys are perennial only in their upper reaches because the water table falls below the level of the streambed during the dry season. The lower stream reaches are seasonally intermittent.

The North San Francisco Bay area has a Mediterranean-type climate, characterized by moderate temperatures and markedly seasonal precipitation that falls primarily during late autumn to early spring. Precipitation amounts are dependent on altitude, with average annual amounts that range from less than 20 inches in some valley locations to more than 60 inches in the higher elevations of the Coast Ranges.

Aquifers and Confining Units

The principal water-yielding materials in the north San Francisco Bay area valleys are unconsolidated and semi-consolidated marine and continental sediments and unwelded tuffaceous beds in volcanic rocks. Consolidated rocks of Cretaceous and Jurassic age that underlie the entire area have little permeability and form the boundaries of the ground-water flow system. The permeability and extent of water-yielding deposits varies considerably. In all the valleys, alluvial-fan deposits and stream-valley alluvium compose the major part of the aquifer. Locally, marine and estuarine deposits of sand beneath the Santa Rosa and the Petaluma Basins are an important source of ground water. Volcanic tuff of Pliocene age in the areas of volcanic rocks shown in figure 108 yields water to wells in the Sonoma and the Petaluma Basins.

Ground water is under unconfined, or water-table, conditions in shallow alluvial deposits and locally where it is near the land surface in other types of rocks. The ground water is confined or semi-confined in deeper parts of the alluvial deposits and nonalluvial

formations. Because of their lenticular nature, water-yielding deposits in the north San Francisco Bay area valleys are generally discontinuous and isolated. Further, many of the deep deposits are displaced by faults. As a result, the valleys are a collection of variously connected and isolated aquifers. Generally, the alluvial-fan and stream-valley alluvial deposits in each basin are sufficiently continuous to be considered single aquifers; however, because of the geologic complexity of the area and the limited availability of data, the exact extent and degree of continuity of many deep aquifers is unknown.

Ground-Water Flow System

Recharge to the ground-water flow system enters permeable sediments at the valley margins primarily as runoff from precipitation in the mountains and hills that surround the valleys. Other sources of recharge are precipitation that falls directly on permeable deposits in low-lying areas of the valleys and seepage through streambeds in areas where the water table is lower than the stream level and the streambed sediments are sufficiently permeable to permit infiltration into the aquifers. Discharge is by seepage to gaining reaches of streams, spring discharge, evapotranspiration, and withdrawals from wells.

All the basins are drained by streams that are perennial only in their upper reaches. The lower reaches become dry in summer because of infiltration where they are underlain by permeable deposits. The ground-water flow system in most basins is essentially self-contained, and interbasin transfer of water is minor.

Ground-water movement generally followed surface-water drainage under natural, or predevelopment, conditions. The discontinuous nature of deep water-yielding materials makes it impossible to construct accurate basinwide water-level maps. However, the ground-water flow pattern in deep aquifers is likely to be similar to that of shallow aquifers. Withdrawals alter the direction of ground-water movement locally and can affect significant changes in regional flow patterns if withdrawal rates are relatively large. Present-day (1995) flow patterns, in general, do not differ significantly from those of predevelopment conditions except locally near withdrawal centers. Withdrawal in the past, however, has reversed the freshwater gradient and induced the intrusion of saltwater in the lower parts of the Napa, the Sonoma, and the Petaluma Valleys.

Fresh Ground-Water Withdrawals

Surface and ground water are used conjunctively in the north San Francisco Bay area valleys. Several municipalities obtain a significant amount of their supplies from imported surface water, either from the Russian River or the aqueduct systems that serve San Francisco Bay area cities to the south. Nonetheless, ground water is used for some municipal supplies, as well as for irrigation, stock watering, and domestic uses.

Currently (1995), ground-water recharge and discharge are approximately in balance on an average annual basis in most areas, and withdrawals in excess of recharge are not

common. However, because of the relatively limited storage capacity of the aquifers, as well as water-quality concerns, the amount of additional ground water that can be withdrawn without adverse effects is restricted. Although lowering of the water table can allow infiltration of additional recharge that might normally be rejected, withdrawal in excess of recharge can deplete ground-water reserves and possibly cause the migration of poor-quality water into wells. Careful monitoring of local and regional water levels will always be necessary to ensure proper use of the resource.

Ground-Water Quality

The quality of ground water in the north San Francisco Bay area valleys is generally suitable for most purposes. However, some problems, such as locally large concentrations of chloride, sodium, boron, nitrate, iron, and manganese, might restrict use of ground water for some applications.

Large concentrations of chloride can make water unusable for drinking and can also be toxic to plants. Drinking-water recommendations of the U.S. Environmental Protection Agency suggest a chloride concentration of less than 250 milligrams per liter. However, chloride in concentrations as low as 106 milligrams per liter may be toxic to some plants; such concentrations have been detected in ground water in the Santa Rosa Basin. Sources of chloride in the north San Francisco Bay area aquifers include seawater intrusion, thermal water, and dissolved minerals from marine and volcanic rocks. The valleys most affected by large chloride concentrations are the Petaluma, the Sonoma, and the Napa, in which seawater intrusion caused by excessive ground-water withdrawals has been the primary source. Reduced withdrawals and increased surface-water imports have helped alleviate the salinity problem.

Excessive sodium in irrigation water can be toxic to plants and can decrease soil permeability. Possible sources of sodium in the north San Francisco Bay area valleys include cation exchange between ground water and clay minerals, upward migration of salty water along faults, dissolved minerals in water from marine sediments, thermal water, and seawater intrusion.

Sodium is often the dominant cation in ground water in the north San Francisco Bay area valleys and has been reported locally in concentrations in excess of 250 milligrams per liter, which is sufficiently large to be of concern. The problem is widespread in the Santa Rosa Basin, where large sodium concentrations are thought to be related primarily to cation exchange. The source of excessive sodium in the other four valleys could be one or all of the sources listed above, but seawater intrusion is the primary source in the alluvial-fan deposits in the southern ends of the Petaluma, the Sonoma, and the Napa Valleys.

Although essential to plant growth in small amounts, boron in excess of 0.5 milligram per liter can be stressful or toxic to many plants, and water with a boron concentration of greater than 2.0 milligrams per liter is toxic to most plants. Boron is usually associated with water that has a large sodium concentration and the sources for boron in the area

are generally the same as for sodium. Ground water that has a boron concentration of 0.5 milligram per liter or larger is found in scattered wells throughout the north San Francisco Bay area.

The presence of nitrate in ground water is usually an indication of contamination by septic tanks, fertilizers, or waste from farm animals. Large nitrate concentrations can cause methemoglobinemia (a blood disease) in infants, and State drinking-water standards in California have been set at 45 milligrams per liter of nitrate, or 10 milligrams per liter nitrogen. Nitrate is not a widespread problem in most of the north San Francisco Bay area, except locally, northwest of Petaluma where nitrate concentrations are as large as three times the maximum allowed for drinking water. The probable sources appear to be septic-tank leachate plus livestock and poultry manure that was placed in unlined pits.

Domestic water for the subject property is provided by the East Bay Municipal Utility District (EBMUD). EBMUD obtains water from the Mokelumne River watershed in the Sierra Nevada Mountains, and does not use groundwater for its public water supply. AquaTerra did not identify any registered water wells on the subject property or adjacent properties.

6.0 RESULTS OF THE ON-SITE INSPECTION

The purpose of the on-site inspection is to identify potential environmental concerns by visual observation of the subject property and surrounding area.

6.1 Observations

The purpose of the site inspection was to identify potential environmental concerns by visual observation, through a walking inspection of the subject property and surrounding areas. During the inspection of the property, an effort was made to look at all mechanical rooms, storage rooms, and common areas, if applicable. During the inspection of the surrounding grounds, the inspector looked for stained or disturbed soil, signs of illegal or unauthorized dumping, and improper or imprudent storage of hazardous materials.

The subject property is completely paved with asphalt and surrounded by chain link fencing and the rear walls of adjacent buildings. There is a small metal and glass building is used for the parking attendant. The property consists of approximately 1.42 acres (62,006 square feet) of land that contains approximately 233 surface parking spaces. The property is used as a public parking lot. The Site Drawing is shown as Figure III.

A 55-gallon drum filled with solids, presumably soil cuttings from earlier subsurface investigations, was observed on the Webster Street frontage and adjacent to the handicapped parking spaces. Five decommissioned groundwater monitoring wells were observed on an approximate north-south azimuth, that bisects the property. The road boxes for the wells were filled to grade with concrete and properly abandoned.

The Torchio Body Shop, adjacent to the northwest corner of the property, has hydraulic lifts within its building. No exterior storage of petroleum products was observed around this building.

The 23rd Street Garage, an out-parcel on the south side of the subject property, stores waste oil in an above-ground tank within the building. This facility has electric lifts. No hydraulic lifts were observed from the garage entrance to this building. No outside storage of potentially hazardous materials was observed proximate to this facility.

The four restaurants, located on the out-parcel in the southwest corner of the property, store waste cooking grease and trash dumpsters on the Webster Street sidewalk, adjacent to the chain link fence on the southwest corner of the property. Spilled grease and bags of trash were observed in this area. This is a potential health hazard on the public sidewalk adjacent to the subject property.

There were no high-voltage electrical transmission lines observed within 1/4 mile of the subject property.

6.2 Hazardous Substances Identification

Minimal solid waste is generated at the subject property. Solid waste at the adjacent businesses is periodically emptied by private vendors and the City of Oakland Sanitation Department.

A limited subsurface investigation was performed to evaluate the potential for hydrocarbon contamination[2]. This subsurface investigation included an electromagnetic survey of the property to identify any buried metal objects. The survey identified a 60'x110' object on the southeast corner and two buried pipes in the center of the property. Eighteen soil borings were also installed on the property. The borings were terminated at twenty feet unless shallower probe refusal was encountered. Low concentrations of chlorinated hydrocarbons, toluene, and Total Petroleum Hydrocarbons-Gasoline were reported to contaminate the subsurface of the property. The findings of these investigations are summarized in Section 4.4 of this report.

One 55-gallon drum containing solids was observed on the Webster Street frontage of the property, adjacent to the handicapped parking spaces. The black drum is typical of containers used to store soil cuttings from subsurface investigations. The label on the drum was faded and illegible. Mr. Tom Peterson, property owner, stated that the drum was likely left by the firm that conducted the 1995 subsurface investigation, as it has been on the property for an extended period of time.

No treatment for insect pests is performed at the subject property. No insecticides are stored on-site.

No quantities of cleaning supplies, chemicals, pesticides, fuels, or other hazardous or waste materials were observed on the subject property.

The AquaTerra inspector did not find any visual signs or physical evidence (i.e., buried or exposed empty containers or stressed/stained vegetation) of hazardous material storage, treatment, handling, contamination, or disposal during the on-site inspection of the subject property. There were five decommissioned monitoring wells on-site. No treatment facilities which handle, solid wastes, or hazardous materials were located on the subject property. The subject property was in good condition.

6.3 Asbestos-Containing Building Materials

6.3.1 Guidelines

Asbestos is an incombustible, chemical-resistant, carcinogenic, fibrous mineral. Asbestos-containing building materials (ACBMs) have been used extensively in fireproofing, electrical insulation, building materials, brake linings, and chemical filters.

The United States Environmental Protection Agency (U.S. EPA) first classified asbestos as a hazardous air pollutant in 1971 under the National Emission Standards for Hazardous Air Pollutants (NESHAPS). On July 12, 1989, the U.S. EPA published its ban-phase out rule for asbestos products. The rule prohibited, at interval stages, the future manufacturing, importation, processing, and distribution of almost all asbestos-containing products. This law was challenged by some manufactures. As a result, on October 18, 1991, the 5th U.S. Circuit Court of Appeals vacated and remanded most of the ban-phase out rule. The court left intact the portion of the rule that regulates products that were not being manufactured, produced, or imported when the rule was published. So, for the most part, the ban-phase out rule was overturned. Products no longer subject to the ban are asbestos cement products, asbestos clothing, pipeline wrap, roofing felt, floor tile, shingles, mill board, transmission components, clutch facings, disc brake pads, drum brake linings, gaskets, and roof and non-roof coatings.

The preliminary asbestos screening performed on the subject property was designed solely to identify the potential for contamination from the most obvious and common suspect ACBMs. The determination, exact quantities, and locations of all ACBMs was beyond the scope of this screening. Building materials inspected were readily accessible for screening. Inaccessible areas are not included in the screening as they are normally investigated prior to building renovation or demolition work. Inaccessible areas include, but are not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interiors of machinery and equipment, and the building's water and sewer system.

A material is considered to be asbestos-containing if it contains greater than one percent asbestos as analyzed by polarized light microscopy (PLM) coupled with dispersion staining techniques. Friable ACBM, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. Non-friable ACBM can be crumbled, pulverized, or reduced to powder during machining, cutting, drilling, or other abrasive procedures. Friable ACBM is more likely to release fibers when disturbed or damaged, than non-friable ACBM.

6.3.2 Conclusions

The improvements constructed at the subject property consist of a metal attendant station, chain link fencing, and asphalt pavement. No suspect asbestos-containing

building materials were observed during the inspection, and no samples were taken. AquaTerra concludes that the risk of contamination to the subject property from asbestos is low.

6.4 Radon Gas

Radon is a colorless, odorless, naturally occurring, radioactive gas originating from the breakdown of uranium in the subsurface. Radon is a known carcinogen implicated in causing lung cancer.

The U.S. EPA has published a Map of Radon Zones in the United States, which indicates that Alameda County, California is in a Zone 3 potential for radon gas. Zone 3 is defined as areas having a predicted average indoor radon screening level of less than 2.0 picoCuries per liter of air (pCi/L). The U.S. EPA recommends additional testing and investigation when radon levels are greater than 4.0 pCi/L.

Based on the U.S. EPA studies, the potential environmental risk for contamination of the subject property by radon gas is low.

6.5 Lead-Based Paint

6.5.1 Guidelines

Paints manufactured before 1960 were heavily leaded, with a tapering off of lead content until 1978, when lead was banned from household paint production. Lead is toxic to humans, but especially children because of their size and weight. High concentrations of lead in children can cause mental retardation, seizures, coma, and death. Adults may suffer severe nervous disorders, but are less likely to die from acute lead exposure. Lead paint in good condition is not usually a problem except in places where painted surfaces rub against each other and create dust, such as opening a painted window.

The U.S. EPA does not publish a guideline or threshold limit specifically for lead in paint for private housing; however, the Lead-Based Paint Poisoning Prevention Act (LBPPPA) requires that Public Housing Projects be inspected for lead-based paint. Under the statute, lead-based paint is defined as paint containing at least 0.5% lead by weight. Lead concentrations above this limit must be managed with an O&M Program or be abated if in poor condition. The 0.5% threshold is equivalent to 5,000 mg/kg of lead.

6.5.2 Conclusions

The improvements constructed at the subject property consist of a metal attendant station, chain link fencing, and asphalt pavement. No suspect lead-based paints were observed, and no samples were taken. AquaTerra concludes that the risk of contamination to the subject property from lead-based paints is low.

6.6 Lead in Drinking Water

6.6.1 Guidelines

Lead is a heavy metal that is toxic to humans, especially children. After lead-based paint, lead in water is the next most common avenue for lead to enter buildings and to poison children. Surface water and groundwater normally have very low concentrations of lead. Lead usually enters domestic water through a plumbing system containing lead-based solder or pipes.

The Safe Drinking Water Act of 1974 (SDWA) established a maximum contaminant level goal of zero for lead in drinking water and the regulatory maximum contaminant level (MCL) for public water systems was set at 50 µg/l (micro-grams per liter). Under the Lead and Copper Rule, promulgated in 1991, the U.S. EPA subsequently replaced this MCL with an action level (AL) of 15 µg/l.

In 1993 the U.S. EPA published the results of a survey on the amount of lead in the drinking water of all the towns in the United States with populations over 3,000 (press release titled: Large and Medium PWSs Exceeding the Lead Action Level. The U.S. EPA found that over 800 public water systems (PWS) had lead levels above the action level of 15 µg/l. This included 100 towns with populations greater than 50,000 (large communities). The results do not mean that all the households in a town with water above the action level will have high lead levels in its water, but only those households with lead pipes or solder inside the house or between the house and the water treatment plant. Currently, if a PWS exceeds the AL in more than 10 percent of the samples collected, the system is required to implement a corrosion control program and provide public education on lead in drinking water.

6.6.2 Conclusions

The improvements constructed at the subject property consist of a metal attendant station, chain link fencing, and asphalt pavement. Domestic water for the subject property is provided by the East Bay Municipal Utility District (EBMUD). Versar, Inc. extensively sampled the potable water in the Lake Tower Building, an adjacent office building[1] and reported no detectable lead in the water samples. EBMUD obtains water

from the Mokelumne River watershed in the Sierra Nevada Mountains, and does not use groundwater for its public water supply. No city served by the EBMUD was among the cities found to have elevated concentrations of lead in their PWS during the testing in 1993. In addition, the EBMUD water supply is tested regularly to insure compliance with U.S. EPA standards. According to the U.S. EPA, the EBMUD drinking water supply has not had any violations involving contamination by lead or other heavy metals in the past eleven years, and has had no violations of any kind in the past nine years. Therefore, the potential environmental hazard for contamination of the subject property by lead in drinking water is low.

6.7 PCB Electrical Equipment Identification

Polychlorinated Biphenyls (PCBs) is the common name for a class of carcinogenic chemicals used as antioxidants in cooling oils in older electrical transformers. Electrical transformers, containing PCBs in the coolant oils, were manufactured between 1929 and 1977. In 1986, the U.S. EPA estimated that approximately 77,000 PCB transformers were still in use. Of these, about 18,000 were owned by utility companies, with the majority of the transformers belonging to building owners.

Electrical service is provided to the subject property by Pacific Gas & Electric Company (PG&E), the local utility. No pad-mounted or pole-mounted transformers were observed on the property or adjacent to the property boundaries. Therefore, the risk associated with contamination of the subject property by PCBs is low.

6.8 Petroleum Storage Tank Facilities

Efforts were made to determine the presence of petroleum storage tanks (PSTs) on and within a 1-mile radius of the subject property. Checking state and local resources for information regarding the presence of any PSTs on the subject property supported visual observations at the subject property.

No ports, vents, concrete pads, saw cuts, or fuel pumps were observed on the subject property.

The previous Phase I Environmental Site Assessment[1] identified a gasoline station on the property from 1967 to 1979. No documentation of the installation or removal of any underground storage tanks was identified in this report. Subsequent subsurface investigations identified TPH-G and toluene in the groundwater on the property. Since these contaminants were not detected in the most up gradient groundwater sample collected on the property, the investigators concluded the source(s) of these hydrocarbon contaminants were likely on-site.

AquaTerra concludes that the underground storage tanks used by the former gasoline station likely leaked and may have been abandoned in place.

In addition to the visual observations, AquaTerra reviewed the following databases:

1. Underground Storage Tanks (UST) - (June 2004): This is a listing of all registered active and inactive underground storage tanks located within the state of California. The UST database is compiled by the California State Water Resources Control Board (SWRCB).

2. Aboveground Storage Tanks (AST) - (June 2004): This is a listing of reported active and inactive aboveground petroleum storage tanks located within the State of California. The AST database is compiled by the SWRCB.

3. Leaking Storage Tanks (LUST) - (May 2004): This is a listing of reported active and inactive leaking aboveground and underground storage tanks located within the State of California. The LUST database is compiled by the SWRCB.

The area reconnaissance and review of the environmental databases identified 14 UST facilities and no AST facilities within a 1/4-mile radius, and 46 LUST facilities within a 1/2-mile radius of the subject property. The database is presented in Appendix E.

0 –1/8-Mile Radius

One UST facility and four LUST facilities were identified within this distance.

The closest LUST facility is identified as **Oakland Tribune,** located at 2300 Valdez Street, approximately 0.03 mile southwest of and cross-gradient relative to the subject property. The release was reported in 1988 and apparently impacted soil only. The site abatement method was to excavate and remove all contaminated soil. The tank was closed by the SWRCB. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The second LUST facility is identified as **Oakland Acura**, located at 255 27th Street, approximately 0.10 mile northeast of and cross-gradient relative to the subject property. This facility is also listed in the RCRIS-SGN database (refer to Section 7.1). The release was reported in 1989 and apparently impacted soil only. The site abatement method was to excavate and remove all contaminated soil. The tank was closed by the SWRCB. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The third LUST facility is identified as **7-Eleven**, located at 2350 Harrison Street, approximately 0.11 mile southeast of and down-gradient relative to the subject property. The spill incident at this site was reported in 1992 and impacted soils. The status is listed as "Leak Being Confirmed – No Action Yet Taken." The database does mention that some data previously provided by the SWRCB is not currently being provided in the most recent edition. Therefore, the data for this facility may not be entirely up to date. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located down-gradient relative to the subject property; 2) the facility is undergoing an investigation in accordance with SWRCB directives.

The fourth LUST facility is identified as **Lake Merritt Lodge**, located at 2332 Harrison Street, approximately 0.11 mile southeast of and down-gradient relative to the subject property. The release was reported in 1993 and apparently impacted soil only. The site abatement method was to excavate and remove all contaminated soil. The tank was closed by the SWRCB. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located down-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The closest UST facility is identified as **CalTrans Dist 4**, located at 111 Grand Avenue, approximately 0.12 mile southwest of and cross-gradient relative to the subject property. This facility is not listed in the LUST database; however, it is listed in the RCRIS-SGN database (refer to Section 7.1). The UST database does not list tank installation information for this site, other than to state that the site status is "Confirmed" and this facility has a valid permit. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; 2) the facility has a valid UST permit; and 3) the facility is not listed in the LUST database.

1/8 –1/4-Mile Radius

Thirteen UST facilities and fourteen LUST facilities were identified within this distance.

The closest UST facility identified within this distance is **ARCO #2185**, located at 290 27th Street, approximately 0.13 mile northeast of and cross-gradient relative to the subject property. This facility is not listed in the LUST database. Another facility listed at this address, **Label Art**, is listed in the LUST database. The UST database does not list tank installation information for the site under either facility name. The release at the Label Art site was reported in 1990 and apparently impacted soil only. The site abatement method is listed as "No Action Yet Taken;" however, the case was closed by the SWRCB in 1996. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The second LUST facility (third UST facility) identified within this distance is **Broadway Motors**, located at 2560 Webster Street, approximately 0.13 mile northwest of and on-gradient relative to the subject property. This facility is listed in the UST database as **Broadway Ford**. The UST database does not list tank installation information for the site under either facility name. The release was reported in 1995; however, neither the media affected nor the abatement method is listed in the database. The case was closed by the SWRCB in 2001. This facility has a low potential for environmental hazard to the subject property because tank closure was completed in accordance with SWRCB directives.

The third LUST facility identified within this distance is a **Chrysler Dealership**, located at 2417 Broadway, approximately 0.13 mile northwest of and on-gradient relative to the subject property. The release was reported in 1994; however, the affected media is not listed. The status is listed as "Leak Being Confirmed – No Action Yet Taken." The data for this facility may not be entirely up to date. This facility has a low potential for environmental hazard to the subject property because it is undergoing an investigation in accordance with SWRCB directives.

The fourth UST/LUST facility identified within this distance is **Acura Auto Dealership (Old)**, located at 294 27th Street, approximately 0.14 mile northeast of and cross-gradient relative to the subject property. The UST database does not list tank installation information for the site. The release was reported in 1992 and apparently impacted soil only. The site abatement method is listed as "No Action Yet Taken;" however, the case was closed by the SWRCB in 1994. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The fifth LUST facility identified within this distance is **Negherbon Auto Center**, located at 2345 Broadway approximately 0.14 mile northwest of and on-gradient relative to the subject property. This facility is also listed in the RCRIS-SGN database (refer to Section 7.1). The release was reported in 1991 and apparently impacted media other than soil or groundwater. The site abatement method is listed as "No Action Yet Taken;" however, the case was closed by the SWRCB in 1994. This facility has a low potential for environmental hazard to the subject property because the tank closure was completed in accordance with SWRCB directives.

The sixth LUST facility identified within this distance is **Lake Merritt Towers I & II**, located at 155 Grand Avenue, approximately 0.16 mile southwest of and cross-gradient relative to the subject property. The release was reported in 1990 and apparently impacted soil only. The site abatement method was to excavate and remove all contaminated soil. The tank was closed by the SWRCB. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The fifth UST facility identified within this distance is **Bauer Porsche Repair**, located at 375 26th Street, approximately 0.17 mile northwest of and on-gradient relative to the subject property. This facility is not listed in the LUST database. The UST database does not list tank installation information for the site. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located on-gradient (not up-gradient) relative to the subject property; and 2) the facility is not listed in the LUST database.

The seventh LUST facility identified within this distance is **Catering by Andre**, located at 434 25th Street, approximately 0.17 mile northwest of and on-gradient relative to the subject property. The release was reported in 1994 and impacted media other than soil or groundwater. The status is listed as "Preliminary Site Assessment Underway," and the abatement method was to excavate and remove all contaminated soil. Based on the dates listed for the information listed, data for this facility may not be entirely up to date. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located on-gradient (not up-gradient) relative to the subject property; and 2) the facility is undergoing an investigation in accordance with SWRCB directives.

The eighth LUST facility (sixth UST facility) identified within this distance is **Bill Cox Cadillac & Buick**, located at 230 Bay Avenue, approximately 0.17 mile southeast of and down-gradient relative to the subject property. Another facility at this address is listed in the RCRIS-SGN database (refer to Section 7.1). The UST database does not list tank installation information for the site. The release was reported in 1994; however, the affected media is not listed. The site abatement method is listed as "No Action Yet Taken," and the status is listed as "Preliminary Site Assessment Underway." This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located down-gradient relative to the subject property; and 2) the facility is undergoing an investigation in accordance with SWRCB directives.

The ninth LUST facility (seventh UST facility) identified within this distance is **Broadway Chevron #92506**, located at 2630 Broadway, approximately 0.18 mile northwest of and on-gradient relative to the subject property. The UST database does not list tank installation information for this site, other than to state that there are four tanks. The release was reported in 1993, and impacted media other than soil or groundwater. The site abatement method is listed as "No Action Yet Taken," and the status is listed as "Pollution Characterization." This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located on-gradient (not up-gradient) relative to the subject property; and 2) the facility is undergoing an investigation in accordance with SWRCB directives.

The eighth UST facility identified within this distance is **The Benz Shop**, located at 381 26th Street, approximately 0.18 mile northwest of and on-gradient relative to the subject property. This facility is not listed in the LUST database. The UST database does not list tank installation information for the site. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is

located on-gradient (not up-gradient) relative to the subject property; and 2) the facility is not listed in the LUST database.

The tenth LUST facility (ninth UST facility) identified within this distance is **Chevron #90019**, located at 210 Grand Avenue, approximately 0.18 mile southeast of and down-gradient relative to the subject property. The UST database does not list tank installation information for this site, other than to state that there is one tank. The release was reported in 1989, and impacted media other than soil or groundwater. The status is listed as "Remedial Action," and the site abatement method was to excavate and remove all contaminated soil This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located down-gradient relative to the subject property; and 2) the facility is undergoing an investigation in accordance with SWRCB directives.

The tenth UST facility identified within this distance is **The Hertz Corporation**, located at 2251 Broadway, approximately 0.19 mile southwest of and cross-gradient relative to the subject property. This facility is not listed in the LUST database. The UST database does not list tank installation information for the site. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) the facility is not listed in the LUST database.

The eleventh UST/LUST facility identified within this distance is the **Ordway Building**, located at 1 Kaiser Plaza, approximately 0.20 mile southwest of and cross-gradient relative to the subject property. This facility is also listed in the RCRIS-SGN database (refer to Section 7.1). The UST database does not list tank installation information for this site. The release was reported in 1992; however, the impacted media is not listed. The site abatement method is listed as "No Action Yet Taken;" however, the case was closed by the SWRCB in 1994. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located cross-gradient relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The twelfth LUST facility identified within this distance is **Broadway Volkswagen**, located at 2740 Broadway, approximately 0.22 mile northwest of and on-gradient relative to the subject property. This facility is also listed in the RCRIS-SGN database (refer to Section 7.1). The release was reported in 1988, and impacted media other than soil or groundwater. The status is listed as "Preliminary Site Assessment Underway," and the site abatement method was to excavate and remove all contaminated soil This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located on-gradient (not up-gradient) relative to the subject property; and 2) the facility is undergoing an investigation in accordance with SWRCB directives.

The thirteenth LUST facility identified within this distance is the **Oakland Dodge**, located at 2735 Broadway, approximately 0.22 mile northwest of and on-gradient

relative to the subject property. This facility is listed in the UST database (twelfth UST facility) as **Jack Tracy Buick**, and is also listed by that name in the RCRIS-SGN database (refer to Section 7.1). The UST database does not list tank installation information for this site. The release was reported in 1989, and impacted soil only. The site abatement method was to excavate and remove all contaminated soil, and the tank was closed by the SWRCB. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located on-gradient (not up-gradient) relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

The fourteenth LUST facility (thirteenth UST facility) identified within this distance is **United Glass**, located at 477 25th Street, approximately 0.25 mile northwest of and on-gradient relative to the subject property. The UST database does not list tank installation information for this site. The release was reported in 1990, impacting media other than soil or groundwater. The site abatement method was to excavate and remove all contaminated soil, and the tank was closed by the SWRCB. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) the facility is located on-gradient (not up-gradient) relative to the subject property; and 2) tank closure was completed in accordance with SWRCB directives.

1/4 –1/2 Mile Radius

Twenty-eight additional LUST facilities were identified within this distance. Due to their distances from the subject property, these facilities have low potentials for environmental hazard to the subject property.

Based on the records reviewed and the area reconnaissance, previous activity on the subject property and the adjacent properties may have contaminated the subsurface soil and groundwater of the subject property.

6.9 Other Conditions of Concern

Based on visual observations made during the on-site inspection, nothing was observed to indicate that the subject property could be considered a wetland, an endangered species habitat, a federally designated scenic area, a historical landmark site, or an area of archeological or paleontologic interest.

7.0 REGULATORY/GOVERNMENT AGENCY INQUIRIES

7.1 Federal and State Regulatory Agencies

A review of applicable and accessible federal, state, and local databases was made to ascertain whether the subject property, bordering properties or properties within the vicinity of the subject property were suspected of having environmental problems which could impact the subject property. The following databases were reviewed:

Federal Databases

A. National Priorities List (NPL) - (April 2004): The NPL Report is an U.S. EPA listing of the nation's worst uncontrolled or abandoned hazardous waste sites. NPL sites are targeted for possible long-term remedial action under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980. In addition, the NPL Report includes information concerning cleanup agreements between U.S. EPA and Potentially Responsible Parties (PRP's) (commonly called Records of Decision, or RODS), any liens filed against contaminated properties, as well as the past and current U.S. EPA budget expenditures tracked within the Superfund Consolidated Accomplishments Plan (SCAP).

B. Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) - (February 2004): The CERCLIS database is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have been investigated, or are currently under investigation by the Federal EPA for the release, or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation and ultimately placed on the National Priorities List. In addition to site events and milestone dates, the CERCLIS Report also contains financial information from the Superfund Consolidated Accomplishments Plan (SCAP).

C. No Further Remedial Action Planned Sites (NFRAP) - (February 2004): This report, also known as the CERCLIS archive, contains information pertaining to sites which have been removed from the U.S. EPA's CERCLIS database. NFRAP sites may be sites where, following an initial investigation, either no contamination was found, contamination was removed quickly without need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

D. Resource Conservation and Recovery Act Information System Corrective Action Sites (CORRACTS) - (February 2004): The CORRACTS report contains information pertaining to hazardous waste treatment, storage, and disposal facilities (RCRA-TSDs) which have conducted, or are currently conducting, a corrective action(s) as regulated under the Resource Conservation and Recovery Act. The following

information is included within the Report: Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS); Inspections and evaluations conducted by federal and state agencies; All reported facility violations, the environmental statute(s) violated, and any proposed and actual penalties; A complete listing of U.S. EPA-regulated hazardous wastes which are generated or stored on-site.

E. Resource Conservation and Recovery Act Information System - Treatment, Storage, and Disposal Facilities (RCRIS-TSD) - (February 2004): This database contains information pertaining to facilities which either treat, store, or dispose of U.S. EPA regulated hazardous waste. The following information is also included in the RCRIS-TS Report: Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS); Inspections and evaluations conducted by federal and state agencies; A complete listing of U.S. EPA regulated hazardous wastes which are generated or stored on-site.

F. Resource Conservation and Recovery Act Information System Generators (RCRA-LGN) - (February 2004): The RCRA-LGN database contains information pertaining to facilities which either generate more than 1,000 kg (2,200 pounds) of hazardous waste per month or meet other applicable requirements of the Resource Conservation and Recovery Act. The following information is also included in the RCRIS-TS Report: Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS); Inspections and evaluations conducted by federal and state agencies; All reported facility violations, the environmental statute(s) violated, and any proposed and actual penalties; Information pertaining to corrective actions undertaken by the facility or U.S. EPA; A complete listing of U.S. EPA regulated hazardous wastes which are generated or stored on-site.

G. Resource Conservation and Recovery Act Information System Small Quantity Generators (RCRA-SGN) - (February 2004): The RCRA-SGN database contains information pertaining to facilities which either generate between 100 kg (220 pounds) and 1,000 kg (2,200 pounds) of hazardous waste per month or meet other applicable requirements of the Resource Conservation and Recovery Act. Protective Filers, commonly called Conditionally Exempt Small Quantity Generators (CESQGs), are facilities that have completed RCRA notification paperwork, but are not, in fact, subject to RCRA regulation. The determination of CESQG status is made by the U.S. EPA. The following information is also included in the RCRIS-TS Report: Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS); Inspections and evaluations conducted by federal and state agencies; All reported facility violations, the environmental statute(s) violated, and any proposed and actual penalties; Information pertaining to corrective actions undertaken by the facility or U.S. EPA; A complete listing of U.S. EPA regulated hazardous wastes which are generated or stored on-site.

H. Emergency Response Notification System (ERNS) - (December 2003): This database is the U.S. EPA's national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances, including petroleum, into the environment. The ERNS reporting system contains preliminary information on specific release, including the spill location, the substance released and the responsible party. Please note that the information in the ERNS Report pertains only to those releases that occurred between January 1, 1997 and March 6, 1998.

I. Toxic Release Inventory System (TRIS) - (March 2004): Section 313 of the Emergency Planning and Community Right-to-Know Act (also known as SARA Title III) of 1986 requires the U.S. EPA to establish an inventory of Toxic Chemicals emissions from certain facilities. Facilities subject to this reporting are required to complete a Toxic Chemical Release Form (Form R) for specified chemicals.

State Databases

J. Solid Waste Inventory System (SWL) - (July 2004): This is the listing of all known active, inactive, and closed landfills or solid waste disposal facilities, and permit application files. This database is maintained by the Integrated Waste Management Board.

K. State Sites - (March 2004): This list consists of any of the following databases:

1. Cal-Sites Database (Cal-Sites): This database, provided by the Department of Toxic Substances Control (DTSC), contains potential or confirmed hazardous substance release properties. In 1996, California EPA re-evaluated and significantly reduced the number of sites in the Cal-Sites database.

2. California Hazardous Material Incident Report System (CHMIRS): This list, maintained by the California Office of Emergency Services, contains information on reported hazardous materials incidents (accidental releases or spills.).

3. CORTESE LIST – Hazardous Waste Substance Site List (CORTESE): This database is provided by the Office of Environmental Protection, Office of Hazardous Materials. The California Governor's Office of Planning and Research annually publishes a listing of potential and confirmed hazardous waste sites throughout the State of California under Government Code Section 65962.5.

4. Voluntary Cleanup Program (VCP): This report is maintained by the DTSC. This list contains low-threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC costs.

5. Cleaner Facilities (Cleaners): This is a list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry-cleaning plants; except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

6. Spills, Leaks, Investigation, and Cleanup Cost Recovery Listing (CA SLIC): This is a list maintained by the California Regional Water Quality Control Board (RWQCB) of any contaminated site that impacts groundwater or has the potential to impact groundwater.

7. Hazardous Waste Information System (HAZNET): This is a list of Facility and Manifest Data, extracted from the copies of hazardous waste manifests received each year by the Department of Toxic Substances Control. This list is maintained by the California EPA.

The subject property was not identified as an NPL CERCLIS, NFRAP, CORRACTS, RCRIS-TSD, RCRIS-LGN, RCRIS-SGN, ERNS, TRIS, SWL, or State Sites facility from the on-site inspection or review of the regulatory agency databases.

Within a 1-mile radius of the subject property, no NPL or CORRACTS facilities were identified. However, three State Sites facilities were identified within this distance.

The closest State Site facility is identified as **Harris Dry Cleaners**, located at 2801 Martin Luther King Jr. Way, approximately 0.56 mile northwest of and on-gradient relative to the subject property. The DTSC Activity is listed as "Preliminary Endangerment Assessment," and the Status is listed as "Removal Action Required (as of June 2000)." This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located more than 1/2 mile from and on-gradient (not up-gradient) relative to the subject property; and 2) the facility is undergoing an investigation in accordance with DTSC directives.

The second State Site facility is identified as **Oakland Laundry Company,** located at 730 29th Street, approximately 0.65 mile northwest of and on-gradient relative to the subject property. The DTSC Status is listed as "No Further Action." This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located more than 1/2 mile from and on-gradient (not up-gradient) relative to the subject property; and 2) the facility is listed as "No Further Action" by the DTSC.

The third State Site facility is identified as **Cal Tech Metals**, located at 841 E. 31st Street, approximately 0.83 mile northwest of and on-gradient relative to the subject property. The DTSC Status is listed as "Property/Site Referred to RCRA." The facility is located beyond the Radius of Interest for the RCRIS-GEN databases. This facility has a low potential for environmental hazard to the subject property for the following

reasons: 1) this facility is located more than 1/2 mile from and on-gradient (not up-gradient) relative to the subject property; and 2) the facility has been referred to RCRA by the DTSC and is located beyond the Radius of Interest for RCRIS-GEN databases.

Within a 1/2-mile radius, no CERCLIS, RCRIS-TSD, or SWL facilities were identified.

Within a 1/4-mile radius, no NFRAP facilities were identified. However, one RCRIS-LGN facility, two unspecified RCRIS-GEN facilities, and 17 RCRA-SGN facilities were identified.

The RCRIS-LGN facility is identified as **Broadway Motors**, located at 437 25th Street, approximately 0.18 mile northwest of and on-gradient relative to the subject property. This facility is also listed in the RCRIS-SGN database. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Large Quantity Generator, this facility produces more than 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located on-gradient (not up-gradient) relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS.

The closest unspecified RCRIS-GEN facility is identified as **Pacific Bell**, located at 80 Grand Avenue, approximately 0.15 mile southwest of and cross-gradient relative to the subject property. No other details are listed in the database, and it is not clear if this facility is a RCRIS-SGN or a RCRIS-LGN facility. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; and 2) no leaks or spills are listed for this facility.

The second unspecified RCRIS-GEN facility is also identified as **Pacific Bell**, this one located at 180 Grand Avenue, approximately 0.23 mile southwest of and cross-gradient relative to the subject property. No other details are listed in the database, and it is not clear if this facility is a RCRIS-SGN or a RCRIS-LGN facility. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located nearly 1/4 mile from and cross-gradient relative to the subject property; and 2) no leaks or spills are listed for this facility.

The closest RCRIS-SGN facility is identified as **Foreign Body Shop** (dba Torchio's), located at 2350 Webster Street, adjacent to the northwest portion of and cross-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The second RCRIS-SGN facility is identified as **Oakland Acura**, located at 255 27th Street, approximately 0.10 mile northeast of and cross-gradient relative to the subject property. This facility is also listed in the LUST database (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No RCRIS leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no RCRIS leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The third RCRIS-SGN facility is identified as **All Pro Transmissions**, located at 2424 Broadway, approximately 0.12 mile northwest of and on-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) no leaks or spills are listed for this facility; and 2) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The fourth RCRIS-SGN facility is identified as **Atlantic Garage**, located at 2500 Webster Street, approximately 0.12 mile northwest of and on-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) no leaks or spills are listed for this facility; and 2) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The fifth RCRIS-SGN facility is identified as **CalTrans Dist 4**, located at 111 Grand Avenue, approximately 0.12 mile southwest of and cross-gradient relative to the subject property. This facility is also listed in the UST database (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The sixth RCRIS-SGN facility is identified as **Saturn of Oakland**, located at 2355 Broadway, approximately 0.13 mile northwest of and on-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small

Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) no leaks or spills are listed for this facility; and 2) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The seventh RCRIS-SGN facility is identified as **Gestetner Corp.**, located at 300 27th Street, approximately 0.14 mile northeast of and cross-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The eighth RCRIS-SGN facility is identified as **West Lake Middle School**, located at 2629 Harrison Street, approximately 0.14 mile northeast of and cross-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The ninth RCRIS-SGN facility is identified as **Negherbon Auto Center**, located at 2345 Broadway approximately 0.14 mile northwest of and on-gradient relative to the subject property. This facility is also listed in the LUST database (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No RCRIS leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) no RCRIS leaks or spills are listed for this facility; and 2) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The tenth RCRIS-SGN facility is identified as **Pat Paterson Cadillac**, located at 230 Bay Avenue, approximately 0.17 mile southeast of and down-gradient relative to the subject property. Another facility at this address is listed in the LUST database (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No RCRIS leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard

to the subject property for the following reasons: 1) this facility is located down-gradient relative to the subject property; 2) no RCRIS leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The eleventh RCRIS-SGN facility is identified as **Broadway Motors**, discussed above.

The twelfth RCRIS-SGN facility is identified as **Val Strough Lexus**, located at 447 25th Street, approximately 0.19 mile northwest of and on-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located on-gradient (not up-gradient) relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The thirteenth RCRIS-SGN facility is identified as **Pacific Bell**, located at 2150 Webster Street, approximately 0.19 mile southwest of and cross-gradient relative to the subject property. This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The fourteenth RCRIS-SGN facility is identified as **Ordway Building**, located at 1 Kaiser Plaza, approximately 0.20 mile southwest of and cross-gradient relative to the subject property. This facility is also listed in the UST and LUST databases (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No RCRIS leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located cross-gradient relative to the subject property; 2) no RCRIS leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The fifteenth RCRIS-SGN facility is identified as **Broadway Volkswagen**, located at 2740 Broadway, approximately 0.22 mile northwest of and on-gradient relative to the subject property. This facility is also listed in the LUST database (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No RCRIS leaks or spills are listed for this facility. As a Small

Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located on-gradient (not up-gradient) relative to the subject property; 2) no RCRIS leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The sixteenth RCRIS-SGN facility is identified as **Jack Tracy Buick**, located at 2735 Broadway, approximately 0.22 mile northwest of and on-gradient relative to the subject property. This facility is also listed in the UST database, and is listed in the LUST database as **Oakland Dodge** (refer to Section 6.8). This facility is not reported in RAATS and is in compliance with all federal, state, and local regulations. No RCRIS leaks or spills are listed for this facility. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located on-gradient (not up-gradient) relative to the subject property; 2) no RCRIS leaks or spills are listed for this facility; and 3) the facility is not listed in RAATS and produces only small quantities of hazardous waste per month.

The seventeenth RCRIS-SGN facility is identified as **Automotive Exchange Serv Inc.**, located at 288 28th Street, approximately 0.25 mile northeast of and cross-gradient relative to the subject property. One violation is listed for this facility, involving Generator – All Requirements. A citation was issued and the incident was resolved in 1993. As a Small Quantity Generator, this facility produces between 100 kg and 1,000 kg of hazardous waste per month. This facility has a low potential for environmental hazard to the subject property for the following reasons: 1) this facility is located approximately 1/4 mile from and cross-gradient relative to the subject property; 2) no recent violations are listed for this facility; and 3) the facility produces only small quantities of hazardous waste per month.

Within a 1/8-mile radius, no ERNS or TRIS facilities were identified.

Based on the records reviewed and the area reconnaissance, no activity on properties within a 1-mile radius of the subject property are likely to lead to contamination of the subject property due to the generation, storage, or disposal of hazardous material. Appendix E presents a summary of the environmental databases reviewed.

7.2 Local Government Inquiries

The City of Oakland Planning Department has included the subject property in a C-40, Community Thoroughfare Commercial Zone. According to the City of Oakland Community & Economic Development Agency has approved the redevelopment of the property with 204 residential units as part of the April 2004 revision of the North Lake

Merritt Master Plan. Alameda County has assigned Use Code 8300-Parking Lots to the subject property

The National Flood Insurance Program (FIRM) Map Community Panel (065048-0015 B, dated September 30, 1982 for Oakland, Alameda County, California indicates that the subject property is located in Unshaded Flood Zone C, "Areas of minimal flooding."

The City of Oakland Fire Department (Leroy Griffin) was contacted for recorded information regarding underground storage tank installation/ removal, chemical hazards, leaks, spills, or violations of zoning codes, fire and life safety codes, or building codes on or near the subject property. According to their records, there are no unresolved incidents requiring a response from the fire department on or near the subject property. There are no outstanding violations on file for the subject property. Mr. Griffin stated that his office must approve an excavation plan, including a health and safety program, prior to excavating the site. His office is responsible for the movement of potentially hazardous materials within the City of Oakland.

8.0 CONCLUSIONS

AquaTerra Assessments has performed a Phase I *Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527 of the **Labor Temple Parking Lot** located at the southeast corner of 23rd Street and Valdez Street in the City of Oakland, Alameda County, California, the *property*. Any exceptions to, or deletions from this practice are described in the appropriate Sections of this report. **This assessment has revealed no evidence of *recognized environmental conditions* in connection with the *property* except for the following:**

- There is a 55-gallon drum of soil cuttings from a previous subsurface investigation stored on the Webster Street frontage of the property.
- A gasoline station occupied the central portion of the property from approximately 1969 to approximately 1979.
- The shallow soil and groundwater of the subject property has been contaminated with low concentrations of chlorinated hydrocarbons (likely off-site sources) and petroleum products (likely on-site sources).

9.0 RECOMMENDATIONS

AquaTerra Assessments recommends the 55-gallon drum of soil cuttings be properly removed from the subject property.

Because the first fifteen feet of soil on the subject property will be excavated as part of the planned redevelopment project, measures to detect contaminated soil and, if encountered, groundwater should be implemented. All contaminated soil and groundwater should be segregated, characterized, then properly consigned to licensed waste storage facilities.

In the event unregistered underground storage tanks are encountered during the excavation, proper notifications to regulatory agencies and subsequent tank removal actions should be implemented.

AquaTerra Assessments recommends no further investigations be conducted to determine the presence of hazardous substances or petroleum products on the subject property.

APPENDIX A

PERSONNEL QUALIFICATIONS

PROFESSIONAL QUALIFICATIONS

AquaTerra Assessments is an Engineering and Environmental Consulting firm serving the commercial real estate industry.

AquaTerra Assessments has been approved by many investment banking firms and mortgage brokers for Phase I Environmental Site Assessments and Engineering Inspection Reports required for financial transactions secured by improved real estate. Since January 1998, we have participated and provided the on-site due diligence for the funding of over $10 Billion of Securitized Debt.
Our services include:

- **Property Condition Inspections**
- **Environmental Site Assessments**
- **American Disability Act (ADA) Compliance Audits**
- **HUD MAP, FNMA, & FMAC Assessments**
- **Seismic Loss Assessments**
- **Asbestos Abatement**
- **Hazardous Material Removal/Abatement**
- **Indoor Air Quality Assessments**
- **Construction Plan Reviews**
- **Construction Draw Inspections**

AquaTerra Assessments has consistently proven responsiveness to our Client's needs. We normally complete the on-site inspections and reports within 2 to 3 weeks of our engagement. Furthermore, the following ongoing support activities are included in our contract price:

- **Report formats specifically designed to meet Client requirements**
- **Issue Reliance Letters and Certificates of Insurance**
- **Interactions with underwriters and rating agencies**
- **Preliminary reports to our Client identifying potential problems**

AquaTerra carries $3 million Commercial General Liability per occurrence with an A-XI Best's insurance rating. (Higher limits are available upon request.) In addition, we provide Professional Liability/Errors and Omissions Insurance up to $3 million per claim/aggregate coverage.

MARY E. "MEG" McGUIRE, E.I.T.
Project Manager
AquaTerra Assessments

Academic:

Texas A&M University:
- B.S. Engineering Technology, 1983

University of Texas at Arlington:
- B.S. Civil Engineering, 1997

Professional Memberships:
- American Society of Civil Engineers
- Environmental Student Organization
- Institute of Transportation Engineers
- Society of Women Engineers

Other:
- Engineer in Training (E.I.T.), State of Texas
- Licensed Asbestos Inspector in Texas (#60-1878)
- U.S. EPA Accredited Lead Inspector (#2060571)

Experience:

Ms. McGuire has seven years of experience conducting various tasks related to civil and environmental engineering investigations. This includes, but is not limited to, Environmental Site Assessments, Seismic Loss Surveys, Tank Removal projects, Repair Inspections, Engineering Property Condition Assessments, and Americans with Disabilities Act Compliance Surveys in various formats including FMAC, FNMA DUS, and HUD.

Prior to joining AquaTerra Assessments, Ms. McGuire was employed at RERC Environmental, Inc., where she performed over 100 Property Condition Assessments and Phase I Environmental Site Assessments. She also successfully implemented a new CAD System group at the Dallas offices of RERC. Prior to joining RERC Environmental, Inc., Ms. McGuire worked for 5 years at J. McNutt & Associates, Inc., where she performed all the necessary background tasks required for producing ESA reports, including site reconnaissance, environmental database searches, and the generation of all graphical representations for each report produced by the firm. Ms. McGuire also has over seven years of experience as a CAD Technician for the Dallas office of Camp Dresser & McKee, Inc., which involved her in the planning, design, and implementation of major municipal and industrial water and wastewater projects in several states.

Ms. McGuire has routinely and successfully assumed planning, scheduling, implementing and reporting responsibilities for engineering investigations.

JAMES W. CRAWFORD
Vice President
AquaTerra Assessments

Academic

The Citadel:	• B.S. in Chemistry
University of South Carolina:	• Ph.D. in Organic Chemistry
Southern Methodist University:	• MBA in Real Estate & Finance
University of Texas at Arlington:	• EPA AHERA Certified Inspector
California OPSC	• AHERA Accreditation Number 200-460

Other:

- Texas Dept of Health Asbestos Inspector
- Licensed Real Estate Broker – Texas
- Registered Environmental Assessor I (California #07273)
- HUD Multifamily Accelerated Processing (MAP) 3rd Party Technical Training

Experience

Dr. Crawford joined AquaTerra Assessment Services Corporation in 1999. He has implemented several Voluntary Cleanup Program and Innocent Owner Program remediations for environmentally impaired properties in the southwest. These remediations included extensive subsurface investigations, hazardous waste reductions, and disposals. He has conducted several hundred property condition and ADA surveys as well as environmental site assessments. Previously he was President of RERC Environmental, Inc. His responsibilities include directing both the technical and business aspects of the company.

His work experience with IBM Corporation and Mead Corporation included establishing and managing test facilities specializing in the development of methods for detection of trace amounts of organic compounds. At IBM, Dr. Crawford served as a Senior Engineer and managed operations for Product Development, Product Engineering and Manufacturing Engineering.

Dr. Crawford obtained the necessary EPA and OSHA permits and licenses to sustain operations at chemical processing plants in Kentucky, Colorado and Texas. He has supervised numerous subsurface projects and UST removal and site remediations. Furthermore, he has established and operated several analytical chemical laboratories specializing in trace analysis of organic contaminants.

In addition to his technical background, Dr. Crawford possesses a vast understanding of the real estate industry. He served as Vice President with the Commercial/Retail Division of a large Dallas area real estate brokerage firm where he brokered apartment projects, sale-leasebacks, and special purpose buildings.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA
This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.
The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.
Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.
Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

Environmental FirstSearch
Federal Databases and Sources

ASTM Databases:

CERCLIS: ***Comprehensive Environmental Response Compensation and Liability Information System.*** The EPA's database of current and potential Superfund sites currently or previously under investigation. Source: Environmental Protection Agency.

Updated quarterly.

CERCLIS-NFRAP (Archive): ***Comprehensive Environmental Response Compensation and Liability Information System Archived Sites.*** The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Updated quarterly.

ERNS: ***Emergency Response Notification System.*** The EPA's database of emergency response actions. Source: Environmental Protection Agency. Data since January, 2001, has been received from the National Response Center as the EPA no longer maintains this data.

Updated quarterly.

FINDS: ***The Facility Index System.*** The EPA's Index of identification numbers associated with a property or facility which the EPA has investigated or has been made aware of in conjunction with various regulatory programs. Each record indicates the EPA office that may have files on the site or facility. Source: Environmental Protection Agency.

Updated semi-annually.

NPL: ***National Priority List.*** The EPA's list of confirmed or proposed Superfund sites. Source: Environmental Protection Agency.

Updated quarterly.

RCRIS: ***Resource Conservation and Recovery Information System.*** The EPA's database of registered hazardous waste generators and treatment, storage and disposal facilities. Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List). Source: Environmental Protection Agency.

RCRA TSD: ***Resource Conservation and Recovery Information System Treatment, Storage, and Disposal Facilities.*** The EPA's database of RCRIS sites which treat, store, dispose, or incinerate hazardous waste. This information is also reported in the standard RCRIS detailed data.

ASTM Databases (continued):

RCRA COR: ***Resource Conservation and Recovery Information System Corrective Action Sites.*** The EPA's database of RCRIS sites with reported corrective action. This information is also reported in the standard RCRIS detailed data.

RCRA GEN: ***Resource Conservation and Recovery Information System Large and Small Quantity Generators.*** The EPA's database of RCRIS sites that create more than 100kg of hazardous waste per month or meet other RCRA requirements. Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List).

RCRA NLR: ***Resource Conservation and Recovery Information System sites No Longer Regulated.*** The EPA's database of RCRIS sites that create less than 100kg of hazardous waste per month or do not meet other RCRA requirements.

All RCRA databases are Updated quarterly

Environmental FirstSearch
Federal Databases and Sources

Non-ASTM Databases:

HMIRS: ***Hazardous Materials Incident Response System.*** This database contains information from the US Department of Transportation regarding materials, packaging, and a description of events for tracked incidents.

Updated quarterly.

NCDB: ***National Compliance Database.*** The National Compliance Data Base System (NCDB) tracks regional compliance and enforcement activity and manages the Pesticides and Toxic Substances Compliance and Enforcement program at a national level. The system tracks all compliance monitoring and enforcement activities from the time an inspector conducts and inspection until the time the inspector closes or the case settles the enforcement action. NCDB is the national repository of the 10 regional and Headquarters FIFRA/TSCA Tracking System (FTTS). Data collected in the regional FTTS is transferred to NCDB to support the need for monitoring national performance of regional programs.

Updated quarterly

NPDES: ***National Pollution Discharge Elimination System.*** The EPA's database of all permitted facilities receiving and discharging effluents. Source: Environmental Protection Agency.

Updated semi-annually.

NRDB: ***National Radon Database.*** The NRDB was created by the EPA to distribute information regarding the EPA/State Residential Radon Surveys and the National Residential Radon Survey. The data is presented by zipcode in Environmental FirstSearch Reports. Source: National Technical Information Service (NTIS)

Updated Periodically

Nuclear: The Nuclear Regulatory Commission's (NRC) list of permitted nuclear facilities.

Updated Periodically

PADS: PCB Activity Database System
The EPA's database PCB handlers (generators, transporters, storers and/or disposers) that are required to notify the EPA, the rules being similar to RCRA. This database indicates the type of handler and registration number. Also included is the PCB Transformer Registration Database.

Updated semi-annually.

Receptors: 1995 TIGER census listing of schools and hospitals that may house individuals deemed sensitive to environmental discharges due to their fragile immune systems.

Updated Periodically

Non-ASTM Databases (continued):

RELEASES: ***Air and Surface Water Releases.*** A subset of the EPA's ERNS database which have impacted only air or surface water.

Updated semi-annually.

Soils: This database includes the State Soil Geographic (STATSGO) data for the conterminous United States. It contains information regarding soil characteristics such as water capacity, percent clay, organic material, permeability, thickness of layers, hydrological characteristics, quality of drainage, surface, slope, liquid limit, and the annual frequency of flooding. Source: United States Geographical Survey (USGS).

Updated quarterly

TRIS: ***Toxic Release Inventory System.*** The EPA's database of all facilities that have had or may be prone to toxic material releases. Source: Environmental Protection Agency.

Updated semi-annually.

ENVIRONMENTAL FIRST SEARCH
CALIFORNIA DATABASES (DB) AND SOURCES

CAL SITES: DB TYPE = ST (STATE SITES)
Source: The CAL EPA, Depart. Of Toxic Substances Control
Phone: (916) 323-3400

The CAL EPA Department of Toxic Substances Control (DTSC) maintains a database of information on properties (or sites) in California where hazardous substances have been released, or where the potential for such release exists. The types of properties in the CALSITES database are categorized as: Annual Work Plan, Backlogged Properties, Certified / De-listed Sites, No Further Action, Preliminary Endangerment Assessment in Progress, Preliminary Endangerment Assessment Required, Removal Action Required, Expedited Remedial Action Program, Voluntary Cleanup Program, Deed Restricted Properties, and Referred Properties. For more information on individual sites call the number listed above.

CORTESE: DB TYPE = ST (STATE SITES)
Source: The CAL EPA, Department of Toxic Substances Control
Phone: (916) 445-6532

Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program. The CAL EPA Dept. of Toxic Substances Control compiles information from subsets of the following databases to make up the CORTESE list:

1. The Dept. of Toxic Substances Control; contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database. Formerly known as ASPIS are included (CALSITES formerly known as ASPIS).
2. The California State Water Resources Control Board; listing of Leaking Underground Storage Tanks are included (LTANK)
3. The California Integrated Waste Management Board; Sanitary Landfills which have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF, now AB 3750).

Note: Track Info Services collects each of the above data sets individually and lists them separately in the following First Search categories in order to provide more current and comprehensive information: CALSITES: SPL, LTANK: LUST, WB-LF: SWL

SWIS SOLID WASTE INFORMATION SYSTEM: DB TYPE = SW
(SOLID WASTE RELATED SITES)
Source: The Integrated Waste Management Board
Phone: (916) 255-2331

The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed above.

Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.

WMUDS: DB TYPE = SW (SOLID WASTE RELATED SITES)
Source: The State Water Resources Control Board
Phone: (916) 227-4365

The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's.

Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.

ORANGE COUNTY LANDFILLS: DB TYPE = SW (SOLID WASTE RELATED SITES)
Source: Orange County Health Dept.
Phone: (714) 834-3536

LUSTIS: DB TYPE = LU (LEAKING UNDERGROUND STORAGE TANKS)
Source: The State Water Resources Control Board
Phone: (916) 227-4416

The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database.

SAN DIEGO COUNTY LEAKING TANKS: DB TYPE = LU
(LEAKING UNDERGROUND STORAGE TANKS)
Source: San Diego County Dept. of Environmental Health
Phone: (619) 338-2242

Maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed above.

SLIC REGIONS 1 - 9: DB TYPE = SP (SPILLS-90)
Source: The CAL EPA Regional Water Quality Control Boards 1 - 9

The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups. For phone number listings of departments within each region visit their web sites at: http://www.swrcb.ca.gov/regions.html

SAN DIEGO COUNTY HE17 PERMITS: DB TYPE = PE (PERMITS)

Source: The San Diego County Depart. Of Environmental Health
Phone: (619) 338-2211

The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed above.

SAN BERNARDINO COUNTY HAZARDOUS MATERIALS PERMITS: DB TYPE = PE (PERMITS)
Source: San Bernardino County Fire Dept.
Phone:(909) 387-3080

Handlers and Generators Permit Information Maintained by the Hazardous Materials Div.

LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG: DB TYPE = OT
(OTHER UNIQUE DATABASES)
Source: The Los Angeles County Hazardous Materials Division
Phone: (323) 890-7806

The County of Los Angeles Public Health Investigation Compliant Control Log

ORANGE COUNTY INDUSTRIAL SITE CLEANUPS: DB TYPE = OT
(OTHER UNIQUE DATABASES)
Source: Orange County Environmental Health Agency
Phone:(714) 834-3536

AST ABOVEGROUND STORAGE TANKS: DB TYPE = US (UNDERGROUND STORAGE TANKS)
Source: The State Water Resources Control Board
Phone:(916) 227-4364

The Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST's with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation.

SWEEPS / FIDS STATE REGISTERED UNERGOROUND STORAGE TANKS: DB TYPE = US
Source: CAL EPA Dept of Toxic Substances Control
Phone:(916)227-4404

Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA's Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. Track Info Services included the UST information from the FIDS database in its First Search reports for historical purposes to help its clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed above.

CUPA DATABASES & SOURCES
(DB TYPE = US (UNDERGROUND STORAGE TANKS)

DEFINITION OF A CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.

A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified.

Please Note: Track Info Services, LLC collects and maintains information regarding Underground Storage Tanks from majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefor, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

Lawson & Associates

Geotechnical Consulting, Inc.

July 26, 2004 Project No. 041073-01

Mr. Peter Cossavella
Pacific Properties
20408 Amapola Avenue
Orange, CA 92869

Subject: ***Due Diligence Review Proposed Development of Upper Lake Merritt Project, City Block Bounded by 23rd, 24th, Valdez and Webster Streets, Oakland, California***

References: Berger/Detmer Architects, Inc., 2002, Upper Lake Merritt Residential Project Conceptual Design, 27 sheets, dated January 23, 2002.

URS Corporation, 2001, Letter Report Preliminary Geotechnical Evaluation Mixed-Use Development Oakland, California, dated April 24, 2001.

In accordance with your request, Lawson & Associates Geotechnical Consulting, Inc. (LGC) has prepared this letter to discuss the geotechnical aspects of the proposed development of the city block bounded by 23rd, 24th, Valdez, and Webster Streets in Oakland, California. In preparation of this letter we have reviewed the above referenced documents and regional geologic maps.

We understand the proposed structure is to consist of a split-level, high-rise apartment structure across the majority of the subject city block. The eastern portion of the structure will be constructed to an approximate height of 65 feet above street level, while the western portion will be constructed to a height of approximately 230 feet above street level. We also understand that a portion of the structure will include 1-level of subterranean basement. Several levels of parking will be included in the structure.

Based on our review and understanding of the proposed development, the project appears to be feasible from a geotechnical standpoint. We based this opinion upon the review of the geotechnical letter/report for the site (URS, 2001) provided by you, as well as other background information and review of available geologic maps. The URS report is a preliminary study for development of the site based almost entirely on geotechnical work performed in the vicinity of the project but not on the actual site. The anticipated geotechnical conditions on the site include up to approximately 10 feet of poorly compacted artificial fill underlain by dense formational material. Groundwater is believed to be approximately 17 feet below the surface, corresponding to an approximate elevation of 3 feet above mean sea level.

The proposed structure includes only a partial basement excavation and two dramatically different structure heights. We assume the two structures will be constructed with separate foundation systems with a cold joint separating the two structures. The mid-rise structure may be supported by spread footings and a mat foundation will likely be suitable for the high-rise building at the basement level, dependent upon design load.

If it is determined that a pile foundation is necessary for one or both of the structures, it should be noted that while formational materials below the site typically have good bearing values, difficulty has been reported when driving piles into the occasional dense gravel layers of the San Antonio Formation, which is located at a depth of approximately 75 feet to 110 feet below site grades. Predrilling of driven piles may be required. Water-bearing gravels under artesian pressure have also been encountered in the formational materials that underlie the site.

Basement construction will likely require shored excavation adjacent to the existing structures and streets around the site, which could include: sheet piles, soldier piles with lagging, and soil nail walls. Based on the conceptual plans provided, the basement level is not anticipated to encounter a permanent groundwater table, however, groundwater may be encountered in excavations below this level during construction.

The subject site is located approximately 5 km west of the active Hayward Fault. The soil parameters in accordance with the 1997 Uniform Building Code (U.B.C.) and the 2001 California Building Code (Section 1636) are as follows:

Soil Profile Type = S_D
Seismic Zone = 4
Seismic Source Type (Table 16-U) = A

Detailed geotechnical studies including further subsurface exploration will be needed to provide specific geotechnical design recommendations for the proposed structures, caisson support system (if necessary), and for shoring design. However, for very provisional purposes the foundation engineer may utilize a bearing capacity of 4,000 psf for matt foundations at the basement level excavated into competent bedrock material, and a 100-ton capacity for 14-inch square driven piles 60 feet in length below basement level.

If you should have any questions regarding this letter, please do not hesitate to contact our office. We appreciate this opportunity of be of service.

Respectfully,

LAWSON & ASSOCIATES GEOTECHNICAL CONSULTING, INC.
