Subject: **Limited Phase II Subsurface Investigation**
401 Jackson Street, Oakland, California 94607
AEI Project No. 372927

Dear Ms. Amaro:

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Limited Phase II Subsurface Investigation (Phase II) performed at 401 Jackson Street in Oakland, California ("the Site"). This investigation was completed in general accordance with the authorized scope of services outlined in our authorized proposal number 52290.

1.0 SITE DESCRIPTION

The Site location and vicinity are shown on Figure 1. Figure 2 presents the Site Plan. The Site consists of a one story refrigerated warehouse and office space that houses Del Monte Meats, a meat distribution facility and storage warehouse. The Site is covered by concrete inside of the building with asphalt pavement and sidewalk surrounding the property. The general land use in the vicinity of the Site is mixed use commercial and residential.

The Site is relatively flat at an elevation of about 18 feet above mean sea level. The regional topographic gradient direction slopes toward the southeast and, therefore, the direction of groundwater flow beneath the subject property is inferred to be to the southwest. The Pacific Ocean is located approximately 0.25 miles to the south.

According to information obtained from the USGS, the area surrounding the subject property is underlain by artificial fill deposits of the modern era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Urban land-Baywood complex series. Soils from this series are characterized as loamy sand. Refer to Section 4.1 below for additional information on the site geology and groundwater conditions.

2.0 BACKGROUND

A Phase I Environmental Site Assessment (ESA) was performed by AEI as detailed in a report dated June 13, 2017 (AEI Project Number 372927). The Phase I ESA identified the following Recognized Environmental Concern (REC):

Limited Phase II Subsurface Investigation
401 Jackson Street, Oakland, California

- According to Mr. Gary Bettencourt of Capital Group, a gasoline UST is reportedly located at the Site. Mr. Bettencourt indicated the possible location of the UST along the southwestern corner within the building at the Site. Mr. Bettencourt indicated that this gasoline UST was installed sometime in the 1960s and was abandoned and filled in with concrete sometime in the 1980s. No further information concerning this UST was provided to AEI. No information concerning the subject property or USTs were on file with the regulatory agencies contacted during the course of this assessment. Based on the lack of information concerning the UST, AEI is unable to rule out the potential that a release from the UST has affected the subsurface of the subject property.

3.0 INVESTIGATION EFFORTS

AEI was requested to perform additional investigation, including performing a geophysical survey to identify the location of the UST and collecting soil and groundwater samples, to evaluate if a release from the former UST has significantly impacted the property.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Permitting and Utility Clearance

Drilling permits were obtained from Alameda County Public Works for this investigation (Appendix A). The public underground utility locating service USA North 811 was notified to identify public utilities in the work area. Private utility locating was conducted by 1st Call of Richmond, California to identify underground utilities on the subject property.

3.3 Geophysical Survey

On July 7, 2017, a geophysical survey was conducted by 1st Call of Richmond, California (Appendix B). The purpose of the survey was to evaluate the potential presence of the former UST. The geophysical survey was conducted using ground penetrating radar (GPR). The results from the geophysical survey did not detect the presence of the UST in the locations where the GPR was performed as noted as the potential location of the UST in the Phase I ESA.

The client should be aware of the inherent limitations of geophysical surveying methods and that above and underground utilities and other man-made or natural features (i.e. automobiles, debris piles, tree roots, reinforced concrete, certain soil conditions, etc), if in the area of the survey, may decrease the effectiveness of the survey. The client should be aware that the lack of a detection of a feature from a geophysical survey does not mean that the feature does not exist only that it was not detected.

3.4 Drilling and Soil Sample Collection

On July 7, 2017, 4 soil borings (SB-1 through SB-4) were advanced at the Site, at the locations shown on Figure 2. AEI contracted Penecore Drilling of Woodland, California to advance each of the soil borings using a track-mounted or dolly direct push rig. The borings were advanced to

Limited Phase II Subsurface Investigation
401 Jackson Street, Oakland, California

depths between 8.5 and 15 feet below ground surface (bgs). The borings were positioned around the suspected location of the UST.

The borings were advanced using 2.25-inch outer diameter rods and samples were collected by advancing the rods with acetate sample liners in approximately 3 to 5 foot intervals depending on the rig being used. After each interval, the core was retrieved, core barrel disassembled, and the sample liner was removed and transferred to the onsite geologist.

Refusal was encountered in two of the soil borings, SB-1 and SB-2. The only rig that could be used inside of the refrigerated meat storage rooms was the dolly mounted rig. Tight sands underlaid the Site limited the ability for the dolly mounted rig to reach the target depth for the collection of groundwater samples. Slotted casing was inserted into both boreholes to allow water to enter the hole over time, but no water was observed.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples in the field and the PID readings for each sample were included on the boring logs (Appendix C). Selected soil samples were sealed with Teflon tape and plastic end caps and placed into a cooler with ice.

Down-hole equipment was decontaminated using a triple rinse system containing detergent.

3.5 Groundwater Sample Collection

On July 7, 2017, attempts were made to sample groundwater from the borings. Groundwater was collected from borings SB-3 and SB-4 using temporary PVC casing inserted into the borehole and collected using a peristaltic pump. As noted above, groundwater was not present at the total depth of soil borings SB-1 and SB-2.

3.7 Boring Destruction

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout as required by the permitting agency and completed at the surface with concrete to match the surrounding conditions.

3.8 Laboratory Analyses

The soil and groundwater samples were labeled and placed into a cooler with ice following sampling. The samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical of Pittsburgh, California. Laboratory analytical documentation is provided in Appendix D.

Laboratory analysis of four soil samples consisted of the following:

- Volatile Organic Compounds (VOCs) using US EPA Testing Method 8260
- Total Petroleum Hydrocarbons (TPH) multirange using US EPA Testing Method 8015M

Laboratory analysis of two groundwater samples consisted of the following:

- VOCs using US EPA Testing Method 8260
- Total Petroleum Hydrocarbons (TPH) multirange using US EPA Testing Method 8015M

4.0 FINDINGS

This section presents the findings of the limited Phase II subsurface investigation performed.

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of fine to medium sands with a small amount of clay (Appendix C). Groundwater was encountered in boring SB-3 and SB-4 at a depth of 12 feet bgs. Groundwater slowly entered into the slotted casing over time. SB-4 was drilled to a depth of 15 feet to try and hit groundwater but groundwater at that depth also slowly infiltrated the casing. Groundwater was not encountered in borings SB-1 through SB-2.

4.2 Soil Sample Analytical Results

Table 1 presents a summary of soil sample analytical results. The deepest unsaturated soil sample was analyzed from each of the four soil borings advanced. The results can be summarized as follows:

- Total petroleum hydrocarbons as motor oil (TPHmo) was the only analyte observed in the soil samples collected and analyzed, observed in sample SB-2-9 at a concentration of 12 milligrams per kilogram (mg/kg).
- Total petroleum hydrocarbons as gasoline or diesel, nor VOCs were detected in the soil samples collected and analyzed as part of this investigation.

4.3 Groundwater Sample Analytical Results

Table 2 presents a summary of the groundwater sample analytical results. As noted above, only two groundwater samples were able to be collected. The results can be summarized as follows:

- Total petroleum hydrocarbons as gasoline (TPHg) was observed in one of the two groundwater samples collected and analyzed, observed at a concentration of 3,800 micrograms per liter ($\mu\text{g/L}$) in sample SB-4.
- Total petroleum hydrocarbons as diesel (TPHd) was observed in each of the two groundwater samples collected, observed at concentrations of 200 and 1,200 $\mu\text{g/L}$, in samples SB-3 and SB-4, respectively.
- TPHmo was observed in each of the two groundwater samples collected, observed at concentrations of 1,300 and 4,900 $\mu\text{g/L}$, in samples SB-3 and SB-4, respectively.
- Benzene was observed in the groundwater sample collected from SB-4 at a concentration of 21 $\mu\text{g/L}$.
- Ethylbenzene was observed in the groundwater sample collected from SB-4 at a concentration of 50 $\mu\text{g/L}$.
- Naphthalene was observed in the groundwater sample collected from SB-4 at a concentration of 38 $\mu\text{g/L}$.
- Methyl tertiary butyl ether (MTBE) was observed in the groundwater sample collected from SB-4 at a concentration of 16 $\mu\text{g/L}$.

- Other VOCs were detected in the groundwater samples collected and analyzed as shown in Table 2.

5.0 SUMMARY AND CONCLUSIONS

AEI has completed a Phase II at the subject property. The purpose of the investigation was to identify whether a release of petroleum hydrocarbons from the former UST at the Site had significantly impacted the Site. The geophysical survey did not identify the presence of the former UST, therefore it has likely been removed. The soil and groundwater samples collected and analyzed identified the presence of petroleum hydrocarbons in the soil and groundwater beneath the Site, presumably from a release from the former UST.

The results of this investigation were compared to Environmental Screening Levels (ESLs) developed by the San Francisco Bay Regional Water Quality Control Board. As shown on Table 1, no analytes were detected in soil that exceeded their respective ESL. As shown on Table 2, multiple chemicals were found in groundwater that exceeded their respective ESLs, specifically TPHg, TPHd, benzene, toluene, ethylbenzene, and naphthalene. Therefore, AEI recommends that further investigation be performed to characterize the lateral and vertical extent of petroleum hydrocarbons identified in soil and groundwater at the Site. Engagement with a regulatory agency for the reporting of the unauthorized release from the former UST is also recommended.

6.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Amaro Poultry. All reports, both verbal and written, whether in draft or final, are for the benefit of Amaro Poultry. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors

Limited Phase II Subsurface Investigation
401 Jackson Street, Oakland, California

or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by Amaro Poultry. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact Ms Courtney Monheit at (925) 746-6026, or the undersigned.

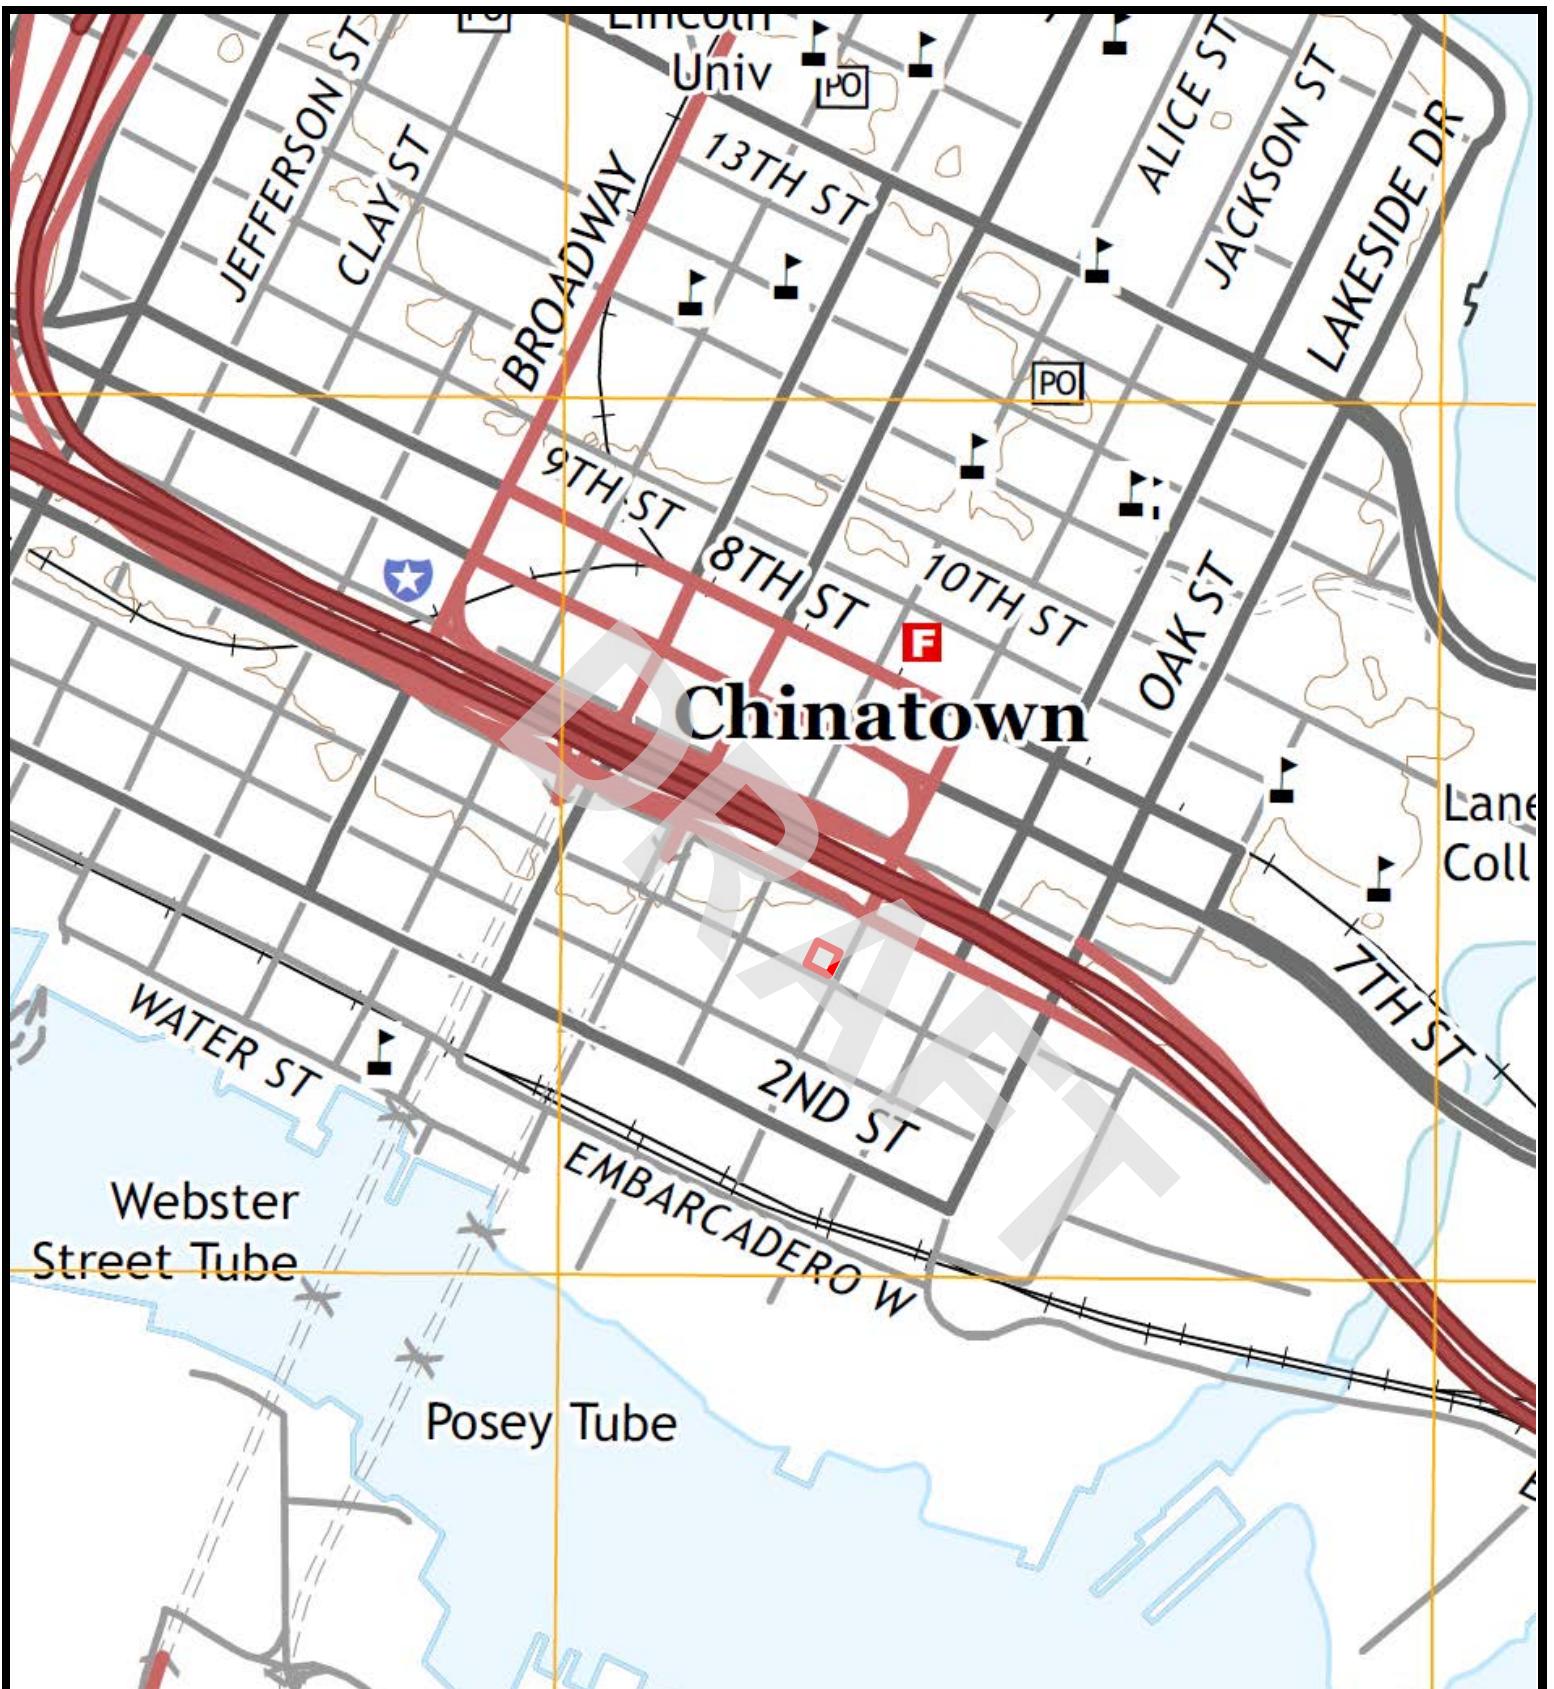

Sincerely,
AEI Consultants

Work Total: \$265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2017-0559	06/30/2017	10/08/2017	4	2.25 in.	12.00 ft

Specific Work Permit Conditions

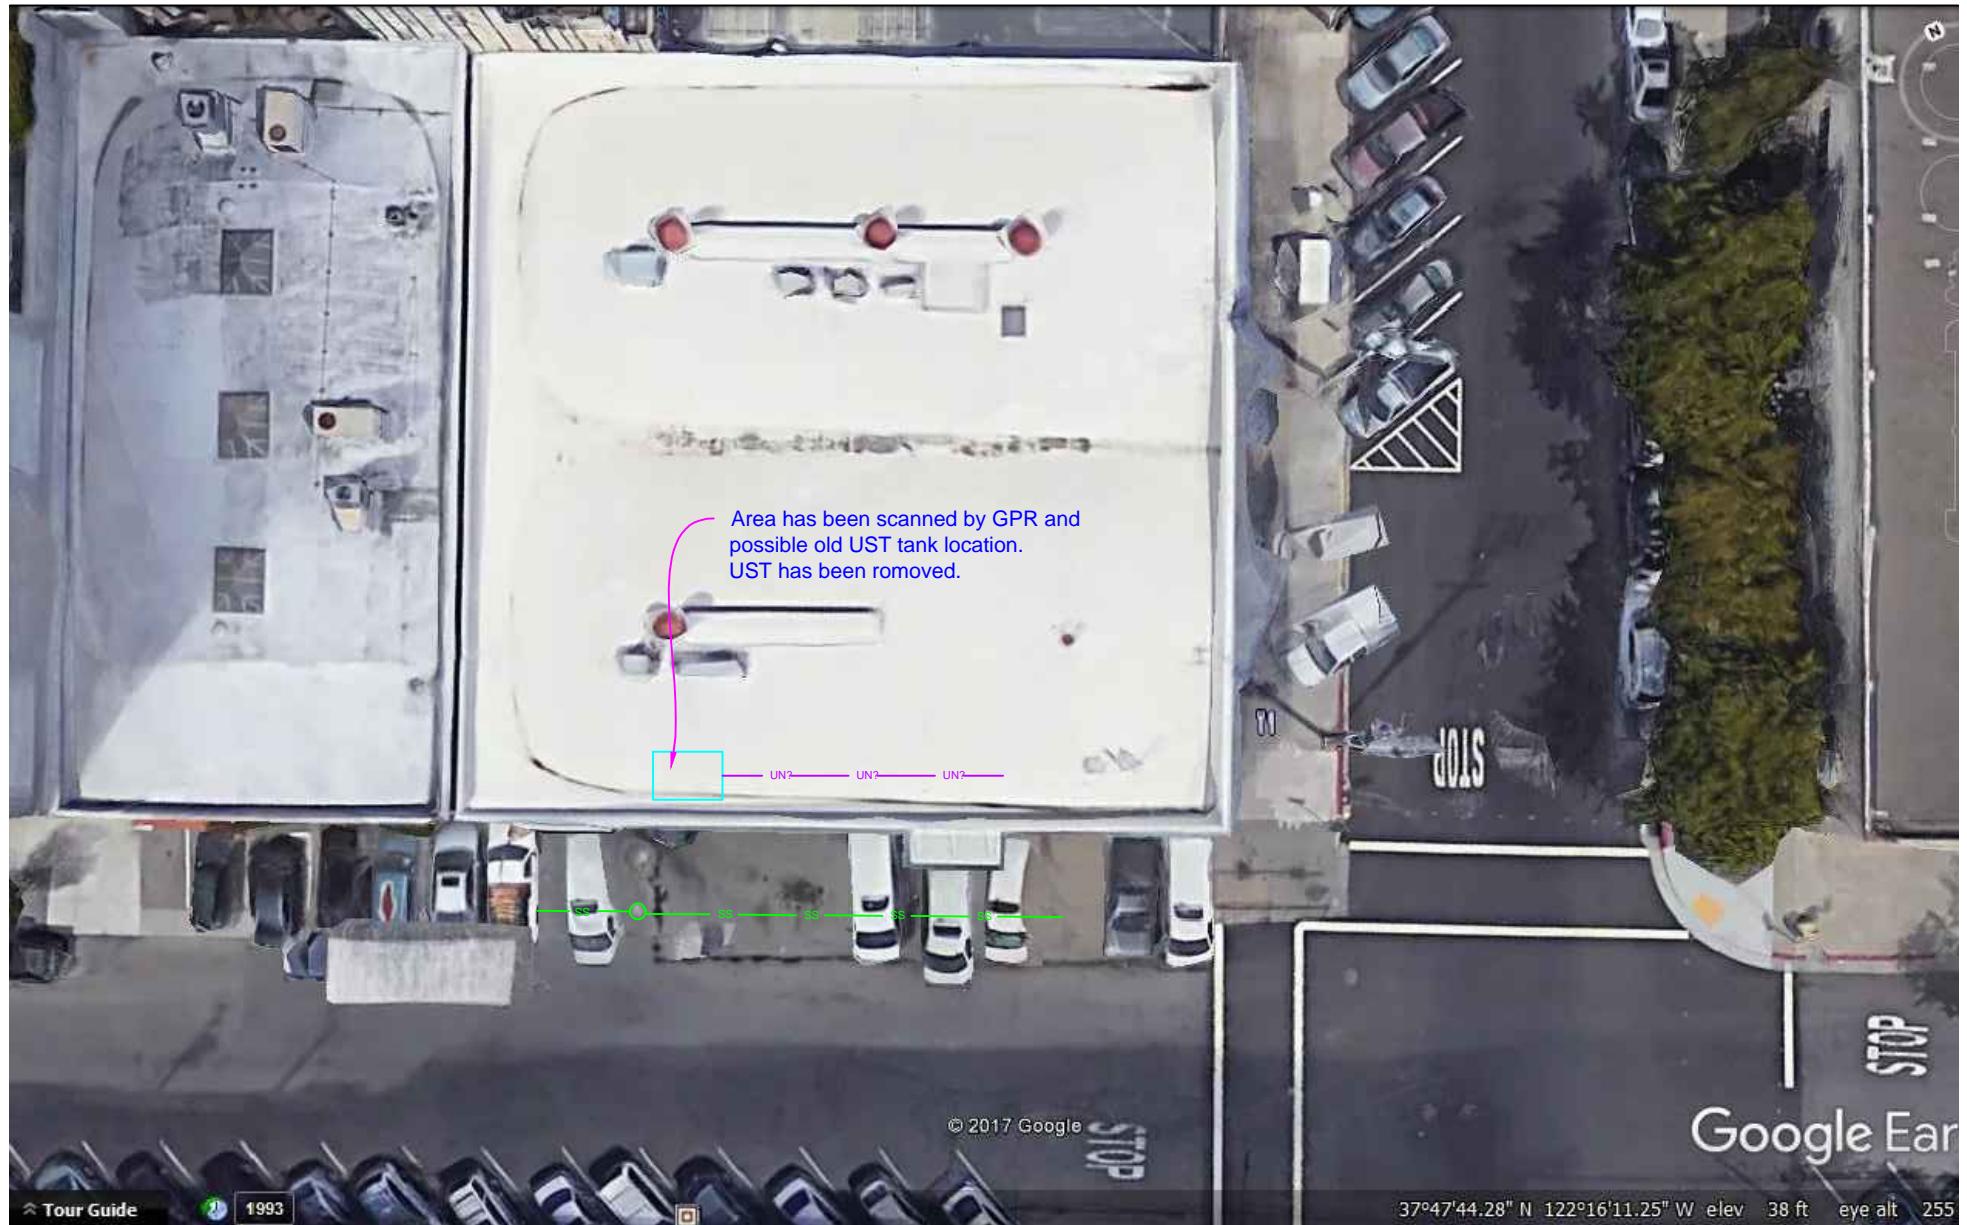

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Prior to any drilling activities, it shall be the applicant's responsibility to contact and coordinate an Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits or agreements required for that Federal, State, County or City, and follow all City or County Ordinances. No work shall begin until all the permits and requirements have been approved or obtained. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County an Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

Alameda County Public Works Agency - Water Resources Well Permit

5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
 6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
 7. Electronic Reporting Regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, CCR) require electronic submission of any report or data required by a regulatory agency from a cleanup site. Submission dates are set by a Regional Water Board or by a regulatory agency. Once a report/data is successfully uploaded, as required, you have met the reporting requirement (i.e. the compliance measure for electronic submittals is the actual upload itself). The upload date should be on or prior to the regulatory due date.
 8. **NOTE:**
Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.
 9. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

Project P.O.: 136120

Project Name: 372927; 401 Jackson St., Oakland

Project Received: 07/07/2017

Analytical Report reviewed & approved for release on 07/11/2017 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants
Project: 372927; 401 Jackson St., Oakland
WorkOrder: 1707208

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants
Project: 372927; 401 Jackson St., Oakland
WorkOrder: 1707208

Analytical Qualifiers

- S Surrogate spike recovery outside accepted recovery limits
- b1 Aqueous sample that contains greater than ~1 vol. % sediment
- c2 Surrogate recovery outside of the control limits due to matrix interference.
- c4 Surrogate recovery outside of the control limits due to coelution with another peak(s) / cluttered chromatogram.
- d1 Weakly modified or unmodified gasoline is significant
- e2 Diesel range compounds are significant; no recognizable pattern
- e4 Gasoline range compounds are significant.
- e7 Oil range compounds are significant

Quality Control Qualifiers

- F2 LCS/LCSD recovery and/or RPD is out of acceptance criteria.
- F3 The surrogate standard recovery and/or RPD is outside of acceptance limits.

Analytical Report

Client: AEI Consultants

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.
