**Subject: Transmittal – Additional Assessment Report**  
401 Jackson Street, Oakland, California  
Case No. RO0003262

Dear Mr. Paresh:

Please find enclosed the Additional Assessment Report prepared for the property located at 401 Jackson Street in Oakland, California. The report describes the activities and results of the additional subsurface investigation performed at the property, which was completed in general accordance with the Work Plan, additional Assessment dated October 30, 2017, approved by the Alameda County Department of Environmental Health (ACDEH) in their letter dated November 7, 2017. Per the ACDEH requirements, I am providing the following Acknowledgement Statement:

"I have read and acknowledge the content, recommendations and/or conclusions contained in the attached document or report submitted on my behalf to ACDEH's FTP server and the SWRCB's GeoTracker website."

If you have any questions or need additional information, please do not hesitate to call Mr. Trent Weise with AEI Consultants at (408) 559-7600.

Sincerely,

Ms. Ruth Amaro

**Subject:** **Additional Assessment Activities**  
401 Jackson Street, Oakland, California 94607  
Case No. RO0003262  
AEI Project No. 372927

Dear Mr. Paresh:

On behalf of Amaro Poultry Co, Inc., AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the additional subsurface investigation performed at 401 Jackson Street in Oakland, California ("the Site"). This assessment was completed in general accordance with the *Work Plan, Additional Assessment* dated October 30, 2017 which was approved by the Alameda County Department of Environmental Health (ACDEH) in their letter dated November 7, 2017.

## **1.0 SITE DESCRIPTION**

The Site is located on the northwest corner of Fourth Street and Jackson Street in a mixed use commercial and residential area of Oakland, California. The Site consists of a one-story warehouse building and an asphalt paved parking area fronting Fourth Street. The interior of the warehouse is covered by concrete. The Site is currently vacant but was most recently occupied by Del Monte Meats, a meat distribution and storage facility. The Site location and vicinity are shown on Figure 1. Figure 2 presents the Site Plan. Available blueprints for the on-site building are provided in Appendix A.

The Site is relatively flat at an elevation of about 18 feet above mean sea level. The regional topographic gradient direction slopes south/southwest toward the Oakland Estuary and, therefore, the direction of groundwater flow beneath the Site is inferred to be to the south/southwest.

According to information obtained from the USGS, the area surrounding the Site is underlain by artificial fill deposits of the modern era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Urban land-Baywood complex series. Soils from this series are characterized as loamy sand. Refer to Section 4.1 below for additional information on the Site geology and groundwater conditions.

## **2.0 BACKGROUND**

A *Phase I Environmental Site Assessment* (ESA) was performed by AEI as detailed in a report dated June 13, 2017. Per the Phase I ESA, a gasoline underground storage tank (UST) was reportedly installed near the southwest corner of the on-site building sometime in the 1960s and abandoned and filled in with concrete sometime in the 1980s. No further information concerning the UST was available and, as such, the former UST was considered a Recognized Environmental Concern (REC).

Due to the identified REC, AEI conducted an investigation at the Site on July 7, 2017, as detailed in AEI's *Limited Phase II Subsurface Investigation Report* dated July 14, 2017. Soil and groundwater samples collected and analyzed during the investigation detected petroleum hydrocarbons at concentrations that warranted further characterization. AEI conducted an additional investigation on August 1 and August 3, 2017, the results of which are presented in the *Additional Subsurface Investigation Report* by AEI and dated August 16, 2017. The scope of these two subsurface investigations included a geophysical survey, advancing a total of eight soil borings, and collecting and analyzing eight soil samples and six groundwater samples. A summary of the investigation findings is as follows:

- The geophysical survey did not identify the presence of the former gasoline UST that was reportedly filled in-place.
- Total petroleum hydrocarbons as gasoline (TPH-g) and total petroleum hydrocarbons as diesel (TPH-d) were not detected in the eight soil samples collected and analyzed.
- Total petroleum hydrocarbons as motor oil (TPH-mo) was detected in three of the eight soil samples collected and analyzed, observed at a maximum concentration of 12 milligrams per kilogram (mg/kg).
- One of the five groundwater samples collected and analyzed, sample SB-4, yielded TPH-g, benzene, and methyl tert butyl ether (MTBE) at concentrations of 3,800, 21, and 16 micrograms per liter ( $\mu\text{g}/\text{L}$ ), respectively. The groundwater sample collected from soil boring SB-8 yielded MTBE at a concentration of 1.8  $\mu\text{g}/\text{L}$ . The groundwater samples collected from the remaining soil borings did not yield TPH-g nor benzene at concentrations at or above their respective laboratory method detection limits.
- Five of the six groundwater samples collected and analyzed yielded elevated concentrations of TPH-d and TPH-mo, observed at maximum concentrations of 3,400 and 45,000  $\mu\text{g}/\text{L}$ , respectively, in the sample collected from soil boring SB-7. The detections of TPH-d and TPH-mo are not consistent with the noted former gasoline UST at the Site.
- The samples collected from the Site between the two investigations did not identify a source of the TPH-d and TPH-mo observed in groundwater nor did the Phase I ESA performed identify a suspected source.

## **3.0 INVESTIGATION EFFORTS**

The previous investigation data summarized above was provided to the ACDEH to perform a Preliminary Site Review, and the review was discussed in an in-person meeting at the ACDEH offices on September 21, 2017. In the meeting, it was discussed that additional characterization would be required by the ACDEH, including:

## **Additional Assessment Activities**

401 Jackson Street, Oakland, California

Case No. RO0003262

- Collecting soil vapor samples to characterize whether the residual petroleum hydrocarbons identified in soil and groundwater beneath the Site represented an unacceptable risk to indoor air quality;
- Further characterization of the nature and extent of TPH-mo in groundwater beneath the Site, and to identify whether a historical heating oil tank remained present at the Site; and
- Providing an addendum to the Phase I Environmental Site Assessment prepared for the Site specifically addressing potential for releases to the floor drains and the location of the refrigerant recirculation lines.

The additional assessment activities, as discussed below, were conducted to address the first two items. An addendum to the Phase I ESA will be submitted to the ACDEH under separate cover. The additional assessment was completed in general accordance with the *Work Plan, Additional Assessment* dated October 30, 2017 which was approved by the ACDEH in their letter dated November 7, 2017.

### **3.1 Health and Safety Plan**

The Site-specific health and safety plan was updated for this additional scope of work, reviewed by on-site personnel, and kept on-site for the duration of the fieldwork.

### **3.2 Permitting and Utility Clearance**

Drilling permits were obtained from Alameda County Public Works for this investigation (Appendix B). The public underground utility locating service USA North 811 was notified to identify public utilities in the work area. Private utility locating was conducted by GPRS of San Francisco, California to identify underground utilities on the subject property.

### **3.3 Geophysical Survey**

On November 9, 2017, a geophysical survey was conducted by GPRS (Appendix C). The purpose of the survey was to evaluate the potential presence of a potential former heating oil UST on the southeast portion of the property. The geophysical survey was conducted using ground penetrating radar (GPR). The results from the geophysical survey did not detect the presence of the suspected historical heating oil UST in the locations where the GPR was performed.

### **3.4 Drilling and Soil Sample Collection**

On November 9, 2017, four soil borings (SB-9 through SB-12) were advanced at the Site, at the locations shown on Figure 2. The locations of the soil borings were selected to further characterize the extent of TPH-mo beneath the Site, primarily between previous soil borings SB-7 and SB-8. AEI contracted Environmental Control Associates of Aptos, California to advance each of the soil borings. Each soil boring was advanced using a direct push rig to a depth of 15-feet below ground surface (bgs).

The soil borings were advanced using 2.25-inch outer diameter rods, and samples were collected by advancing the rods with acetate sample liners in approximately 4 to 5-foot intervals depending on the rig being used (truck rig for exterior borings SB-9 and SB-10, and track rig for interior borings SB-11 and SB-12). After each interval, the core was retrieved, core barrel disassembled, and the sample liner was removed and transferred to AEI's on-site field geologist.

## **Additional Assessment Activities**

401 Jackson Street, Oakland, California

Case No. RO0003262

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples in the field and the PID readings for each sample were included on the boring logs. Completed soil boring logs are included in Appendix D. Selected soil samples were sealed with Teflon tape and plastic end caps, appropriately labeled, placed into a cooler with ice, and entered onto a chain of custody for delivery to the laboratory.

Down-hole equipment was decontaminated using a triple rinse system containing detergent.

### **3.5 Groundwater Sample Collection**

On November 9, 2017, groundwater samples were collected from the soil borings. Groundwater was collected from each of the soil borings using temporary PVC casing inserted into the borehole and collected using a peristaltic pump. Groundwater samples were collected directly into laboratory-supplied glassware, sealed, appropriately labeled, placed into a cooler with ice, and entered onto a chain of custody for delivery to the laboratory.

Down-hole equipment was decontaminated using a triple rinse system containing detergent.

### **3.6 Sub-Slab Soil Vapor Drilling and Sample Collection**

On November 9, 2017, three temporary sub-slab soil vapor probes (SV-1, SV-2, and SV-3) were installed at the Site. The locations shown on Figure 2. Locations SV-1 and SV-2 were selected to be near the former gasoline UST to observed whether chemicals are present in soil gas from the gasoline UST. The third location, SV-3, was selected to assess whether there was a potential unknown release to the sanitary sewer lines at the Site. Each sub-slab soil vapor sample was collected in general conformance with the *Advisory – Active Soil Gas Investigation* by the California Department of Toxic Substances Control (DTSC) and Los Angeles and San Francisco Regional Water Quality Control Boards and dated July 2015.

A rotary hammer drill was used to drill through the concrete floor slab of the building, creating an approximately one-inch diameter hole. A temporary vapor probe consisting of 0.25-inch diameter Teflon™ tubing capped with a screen-lined point was inserted into the newly created hole, terminating just beneath the concrete. Upon installation, sand was poured around each probe tip. The annular space surrounding the tubing was then sealed with hydrated bentonite.

After waiting the *Advisory*-recommended equilibration time of a minimum of two-hours, soil vapor samples were collected. Prior to collecting the samples, a shut-in test was performed by placing a vacuum on the above-grade sampling train and vacuum canisters. The vacuum was observed for approximately six minutes and verified to not change. A helium atmosphere within a shroud covering the sampling apparatus was used as a leak-check compound. Prior to sampling, and following purging of the sampling lines, the purge valve was closed and the initial vacuum of the laboratory-supplied, batch certified clean, one-liter vacuum canister was recorded. The soil vapor samples were collected through laboratory-supplied, batch certified clean regulators at approximately 150-milliliters per minute. After approximately five minutes (depending on the down-hole vacuum), or -5 inches of mercury (in Hg) vacuum in the canister, each canister was closed and removed from the sampling line and the final canister vacuum recorded. The vacuum canister samples were sealed with a gas tight cap, appropriately labeled, and entered onto a chain of custody manifest for delivery to the laboratory.

### **3.7 Boring Destruction**

Following completion of sample collection and removal of tooling and/or probe tubing, the borings were backfilled with neat cement grout as required by the permitting agency and completed at the surface with concrete to match the surrounding conditions.

### **3.8 Laboratory Analyses**

The soil and groundwater samples collected were delivered to McCampbell Analytical Inc. of Pittsburgh, California, and the sub-slab soil vapor samples were sent to ESC Lab Sciences of Mt Juliet, Tennessee. Copies of the laboratory analytical documentation are provided in Appendix E.

Laboratory analysis of four soil samples consisted of the following:

- Volatile Organic Compounds (VOCs) using US EPA Testing Method 8260; and
- Total Petroleum Hydrocarbons (TPH) multirange using US EPA Testing Method 8015M.

Laboratory analysis of two groundwater samples consisted of the following:

- VOCs using US EPA Testing Method 8260; and
- TPH multirange using US EPA Testing Method 8015M.

Laboratory analysis of three sub-slab soil vapor samples consisted of the following:

- Low fraction TPH and VOCs using EPA Testing Method TO-15; and
- Helium using ASTM D 1946.

## **4.0 FINDINGS**

### **4.1 Geology and Hydrogeology**

The subsurface conditions encountered during the assessment were generally consistent with the previous investigations. Sediment encountered in each of the borings generally consisted of fine to medium sands with some fine-grained materials (e.g., silts and clays). Depth to groundwater ranged from approximately 7.63 to 8.35 feet bgs in the soil borings. Groundwater slowly entered the borings over time. The boring logs are provided in Appendix E.

### **4.2 Soil Sample Analytical Results**

Table 1 presents a summary of the soil sample analytical results from the assessment activities as well as the previous investigations for reference. The soil samples with the highest PID reading was analyzed from each of the four soil borings advanced. The results can be summarized as follows:

- TPH-d and TPH-mo were detected in sample SB-10-2.5 at concentrations of 2.2 mg/kg and 25 mg/kg, respectively.
- TPH-g nor VOCs were detected in the soil samples collected and analyzed as part of this investigation.

#### **4.3 Groundwater Sample Analytical Results**

Table 2 presents a summary of the groundwater sample analytical results from the assessment activities as well as the previous investigations for reference. Figure 3 presents the posted groundwater sample results for select compounds. The results can be summarized as follows:

- TPH-d was observed in three of the four groundwater samples collected, observed at concentrations of 400, 260, and 290 µg/L, in samples SB-9, SB-10, and SB-12, respectively.
- TPH-mo was observed in three of the four groundwater samples collected, observed at concentrations of 5,200, 2,900, and 2,900 µg/L, in samples SB-9, SB-10, and SB-12, respectively.
- Chloroform was observed in the groundwater samples collected from SB-10 and SB-12, at concentrations of 2.5 and 3.6 µg/L, respectively.
- Xylenes were observed in the groundwater sample collected from SB-12, at a concentration of 0.80 µg/L.
- MTBE was observed in the groundwater sample collected from SB-11, at a concentration of 0.64 µg/L.
- 4-Methyl-2-Pentanone was observed in the groundwater sample collected from SB-12, at a concentration of 0.93 µg/L.
- TPH-g nor other VOCs were detected in the groundwater samples collected and analyzed as part of this investigation.

#### **4.4 Sub-slab Soil Vapor Analytical Results**

Table 3 presents a summary of the sub-slab soil vapor sample analytical results. The results can be summarized as follows:

- TPH in the low fraction range was observed in the sub-slab soil vapor sample SV-3 at a concentration of 457 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ).
- Benzene was detected in one of the three sub-slab soil vapor samples, observed in sample SV-3 at a concentration of 2.13  $\mu\text{g}/\text{m}^3$ .
- Ethylbenzene, toluene, and xylenes were detected in each of the three sub-slab soil vapor samples, observed at maximum concentrations of 2.44  $\mu\text{g}/\text{m}^3$ , 19.9  $\mu\text{g}/\text{m}^3$ , and 7.71  $\mu\text{g}/\text{m}^3$  (m&p-xylene), respectively.
- Tetrachloroethylene (PCE) was detected in each of the three sub-slab soil vapor samples, observed at a maximum concentration of 19.9  $\mu\text{g}/\text{m}^3$ .
- Minor concentrations of several other VOCs were detected in the sub-slab soil vapor samples collected as shown in Table 3.
- Concentrations of each of the compounds detected were below Environmental Screening Levels (ESLs) for the protection of commercial/industrial vapor intrusion risk (ESLs, revision 3, as prepared by the San Francisco Bay Regional Water Quality Control Board dated February 2016).
- The leak check compound helium was not detected above laboratory reporting limits in the sub-slab soil vapor samples collected, indicating that the results are considered valid.

## **5.0 CONCLUSIONS**

AEI has completed an additional assessment at the Site in general accordance with the ACDEH-approved work plan. The investigation included an additional geophysical survey, advancing four additional soil borings to further characterize the nature and extent of petroleum hydrocarbons in soil and groundwater beneath the Site, and collecting soil vapor samples to characterize whether the residual petroleum hydrocarbons identified in soil and groundwater beneath the Site represent an unacceptable risk to indoor air quality. AEI has the following conclusions based upon the data collected during this investigation:

- The geophysical survey performed did not identify the presence of a historical heating oil tank at the Site. To date, no on-site source for the soil and groundwater TPH-mo impacts observed at the Site has been identified.
- The distribution of TPH-mo in groundwater as shown on Figure 3, which was further characterized with groundwater samples from soil borings SB-9 through SB-12, confirms our previous conclusion that the TPH-mo present in groundwater beneath the southeast corner of the Site is likely from an off-site source. The concentration gradient suggests on-site migration of TPH-mo.
- The sub-slab soil vapor sampling did not identify the presence of compounds at or above commercial/industrial ESLs for vapor intrusion indicating that residual petroleum hydrocarbons identified in soil and groundwater beneath the Site are unlikely to represent an unacceptable risk to indoor air assuming the continued commercial/industrial use of the Site.

The investigation performed in accordance with the ACDEH-approved work plan confirmed that there is no apparent source of the TPH-mo identified in groundwater beneath the Site and that the chemicals observed in the sub-surface do not pose an unacceptable risk to human health within the building at the Site. Therefore, no further work is recommended for the Site and a "No Further Action" letter is respectfully requested from the ACDEH.

## **6.0 CLOSING**

AEI appreciates working with the ACDEH to characterize this Site and move it towards closure. If you have any questions or comments, please do not hesitate to contact Mr. Trent Weise at (408) 559-7600 or at [tweise@aeiconsultants.com](mailto:tweise@aeiconsultants.com).

Sincerely,  
**AEI Consultants**

Trent A. Weise, P.E.  
Vice President

# Alameda County Public Works Agency - Water Resources Well Permit

Public Works Agency  
Alameda County

399 Elmhurst Street  
Hayward, CA 94544-1395  
Telephone: (510)670-6633 Fax:(510)782-1939

Application Approved on: 11/08/2017 By jamesy

Permit Numbers: W2017-0837  
Permits Valid from 11/09/2017 to 11/09/2017

Application Id: 1509056735821  
Site Location: 401 Jackson St, Oakland, CA 94607, USA  
Project Start Date: 11/09/2017  
Assigned Inspector: Contact Eneyew Amberber at (510) 670-5759 or eneyew@acpwa.org

City of Project Site:Oakland  
Completion Date:11/09/2017

Applicant: AEI Consultants - Veronica Statham  
520 3rd Street, Suite 209, Oakland, CA 94607  
Property Owner: Ruth Amaro  
5134 Willowview Court, Pleasanton, CA 94588  
Client: \*\* same as Property Owner \*\*  
Contact: Veronica Statham

Phone: --  
Cell: --

Receipt Number: WR2017-0521	Total Due:	\$265.00
Payer Name : Veronica T Statham	Total Amount Paid:	\$265.00
	Paid By: VISA	PAID IN FULL

## Works Requesting Permits:

Borehole(s) for Investigation-Contamination Study - 4 Boreholes

Driller: ECA - Lic #: 695970 - Method: DP

Work Total: \$265.00

## Specifications

Permit Number	Issued Dt	Expire Dt	#	Hole Diam	Max Depth
W2017-0837	11/08/2017	02/07/2018	4	2.00 in.	12.00 ft

## Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Prior to any drilling activities, it shall be the applicant's responsibility to contact and coordinate an Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits or agreements required for that Federal, State, County or City, and follow all City or County Ordinances. No work shall begin until all the permits and requirements have been approved or obtained. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County an Traffic Safety Plan for any lane closures or detours planned.
5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting,

## **Alameda County Public Works Agency - Water Resources Well Permit**

once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

7. Electronic Reporting Regulations (Chapter 30, Division 3 of Title 23 & Division 3 of Title 27, CCR) require electronic submission of any report or data required by a regulatory agency from a cleanup site. Submission dates are set by a Regional Water Board or by a regulatory agency. Once a report/data is successfully uploaded, as required, you have met the reporting requirement (i.e. the compliance measure for electronic submittals is the actual upload itself). The upload date should be on or prior to the regulatory due date.

### **8. NOTE:**

Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.

9. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

---

**APPENDIX C**

**Geophysical Survey Report**

**AEI Consultants**

GROUND  
PENETRATING  
RADAR  
SYSTEMS, INC.

AEI Consultants  
Attn: Veronica Statham  
Site: 401 Jackson St, Oakland, CA

**Re: GPR Investigation for possible Underground Storage Tanks**

### **Purpose**

The purpose of the investigation was to scan for possible UST's and UST related items at the address listed above.

### **Equipment**

- **Ground Penetrating Radar (GPR), Manufacturer: GSSI, Model: SIR-3000 processing unit with 400 MHz antenna.** GPR works by sending pulses of energy into a material and recording the strength and the time required for the return of the reflected signal. Reflections are produced when the energy pulses enter into a material with different electrical conduction properties from the material it left. The strength of the reflection is determined by the contrast in conductivity between the two materials. The total depth achieved can be as much as 8' with this antenna but can vary widely depending on the dielectric properties of the materials. For more information, please visit: <http://www.geophysical.com/Documentation/Brochures/GSSI-UtilityScanBrochure.pdf>
- **RD7000 pipe locator, Manufacturer: Radiodetection.** The RD7000 can detect the electromagnetic fields from live power or radio frequency signals. It can also be used in conjunction with a transmitter to connect directly to accessible, metallic pipes, risers, or tracer wires. A tone is sent through the pipe or tracer wire at a specific frequency which can then be detected by the receiver. For more information, please visit: <http://www.spx.com/en/radiodetection/pd-rd7000/>
- **Schonstedt GA-72cd Magnetic Locator (Magnetometer).** The magnetometer detects the magnetic field of a ferromagnetic object. It responds to the difference in the magnetic field between two sensors. It is interpreted in the field by listening to changes in frequency as emitted by a speaker on the device. For more information, please visit: <http://www.schonstedt.com/products/ga-52cx/>

### **Process**

Our process begins with collecting scans with GPR across the areas in a grid pattern. Scans are typically spaced 2'-3' apart depending on the size of the targets being searched for. The GPR data is interpreted in real time and anomalies in the data are located and marked on the surface with spray paint, pin flags, etc.

The RD7000 is used to locate pipes or utilities at the soil boring locations. We first sweep all areas with the receiver to detect live power or radio frequency signals followed by connecting to any visible risers or tracer wires that may be in the area.

### **Findings**

No apparent UST's or UST related items were found in the GPR data at time of scanning.

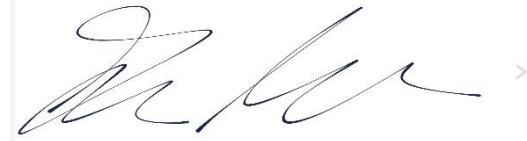

### **Limitations**

Please keep in mind that there are limitations to any subsurface investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No subsurface investigation or equipment can provide a complete image of what lies below. Our results should always be used in conjunction with as many methods as possible including consulting existing plans and drawings, exploratory excavation or potholing, visual inspection of above ground features, and utilization of services such as Dig Alert/Underground Service Alert.

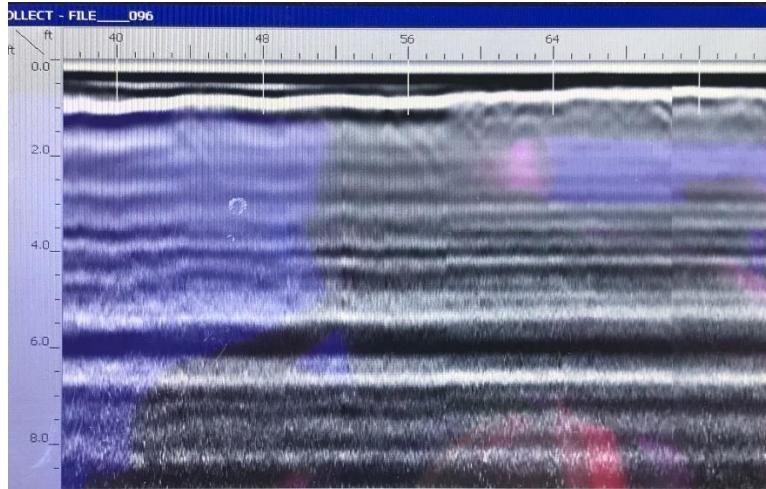

At this site, multiple areas contained reinforcement within the scan area. In these areas, GPR visibility was limited, as well as magnetometer readings due to the reinforcement.

The following pages will further explain the findings

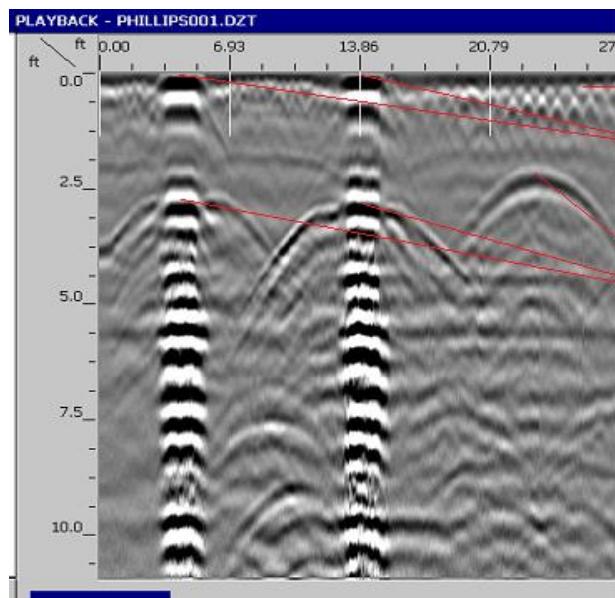

Signed,

Greg Milburn  
Project Manager | Northern California, San Francisco  
GPRS, Inc.  
Direct: 925.332.6472  
Fax: 419-843-5829  
[Greg.milburn@gprsinc.com](mailto:Greg.milburn@gprsinc.com)  
[www.gprsinc.com](http://www.gprsinc.com)

The image to the left is GPR data collected in real time while scanning at this project. All GPR data was consistent, and no suspicious areas were detected while scanning on site.

The image to the left shows GPR data in which a possible UST was found, this example is from a different job site, and is an example of GPR data only, to show what possible UST's would look like if found on site.

"When Quality Counts"

## Analytical Report

**WorkOrder:** 1711448

**Report Created for:** AEI Consultants

2500 Camino Diablo, Ste.#200  
Walnut Creek, CA 94597

**Project Contact:** William Hicks

**Project P.O.:** 145501

**Project Name:** 372927; 401 Jackson Street, Oakland

**Project Received:** 11/10/2017

Analytical Report reviewed & approved for release on 11/17/2017 by:

Angela Rydelius  
Laboratory Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.*

## Glossary of Terms & Qualifier Definitions

**Client:** AEI Consultants  
**Project:** 372927; 401 Jackson Street, Oakland  
**WorkOrder:** 1711448

### Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

## Glossary of Terms & Qualifier Definitions

**Client:** AEI Consultants

**Project:** 372927; 401 Jackson Street, Oakland

**WorkOrder:** 1711448

### Analytical Qualifiers

- S Surrogate spike recovery outside accepted recovery limits
- a4 Reporting limits raised due to the sample's matrix prohibiting a full volume extraction.
- b1 Aqueous sample that contains greater than ~1 vol. % sediment
- c2 Surrogate recovery outside of the control limits due to matrix interference.
- e2 Diesel range compounds are significant; no recognizable pattern
- e7 Oil range compounds are significant

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.															Comments / Instructions				
* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.																			
Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

## Sample Receipt Checklist

Client Name:	<b>AEI Consultants</b>	Date and Time Received	<b>11/10/2017 14:08</b>
Project Name:	<b>372927; 401 Jackson Street, Oakland</b>	Date Logged:	<b>11/10/2017</b>
WorkOrder No:	<b>1711448</b>	Received by:	Kena Ponce
Carrier:	Matrix: <u>Soil/Water</u>	Logged by:	Kena Ponce
	<u>Patrick Johnson (MAI Courier)</u>		

### Chain of Custody (COC) Information

Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample IDs noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Date and Time of collection noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sampler's name noted on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
COC agrees with Quote?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

### Sample Receipt Information

Custody seals intact on shipping container/coolier?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Shipping container/coolier in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Samples in proper containers/bottles?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

### Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
Sample/Temp Blank temperature	Temp: 7.3°C		
Water - VOA vials have zero headspace / no bubbles?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Sample labels checked for correct preservation?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Samples Received on Ice?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
(Ice Type: WET ICE )			

### UCMR Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522? Yes	<input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

MDL	Method Detection Limit.	<sup>1</sup> Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	<sup>2</sup> Tc
RDL	Reported Detection Limit.	<sup>3</sup> Ss
Rec.	Recovery.	<sup>4</sup> Cn
RPD	Relative Percent Difference.	<sup>5</sup> Sr
SDG	Sample Delivery Group.	<sup>6</sup> Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	<sup>7</sup> GI
U	Not detected at the Reporting Limit (or MDL where applicable).	<sup>8</sup> AI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	<sup>9</sup> SC
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

## Qualifier      Description

E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
---	---

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

\* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

## State Accreditations

Alabama	40660	Nevada	TN-03-2002-34
Alaska	UST-080	New Hampshire	2975
