**Re: Chevron Service Station #9-1583
5509 Martin Luther King Way , Oakland, California**

Dear Ms. Hugo:

Enclosed is the Fourth Quarter 1996 Groundwater Monitoring Report and the First Quarter 1997 Groundwater Monitoring Report, that were prepared by our consultant Blaine Tech Services Inc., for the above noted site. The groundwater samples collected were analyzed for TPH-g, BTEX, MtBE, TPH-motor oil constituents, in monitoring wells MW-7 and MW-8, and analyzed for TPH-g, BTEX, and MtBE constituents for the remaining wells.

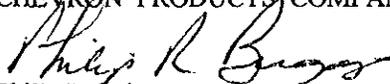

Monitoring wells MW-2, MW-4, and MW-5 were below detection limits for TPH-g and BTEX constituents in both quarters. Wells MW-6 and MW-7 had concentrations of benzene of less than 1.0 ppb. The highest concentration of the benzene constituent in the three remaining wells was detected in MW-8 at 36 ppb.

Depth to ground water in the fourth quarter varied from 8.98 to 13.98 feet below grade with a direction of flow easterly. In the first quarter the depth of the ground water varied from 7.23 to 9.53 feet below grade with a direction of flow to the southeast.

Chevron notes that we are currently awaiting your approval of a Work Plan for Additional Site Assessment that had been previously submitted to your office by Mr. Mark Miller. Chevron will proceed with the additional site assessment upon receiving your concurrence.

Because monitoring wells MW-2, MW-4, MW-5 have been below method detection limits for TPH-g and BTEX constituents, for at least the last eight sampling events; and wells MW-6 and MW-7 have had minimal impact from the BTEX constituents the last eight sampling events, Chevron requests a change to the sampling program. Chevron requests that all these wells be sampled semi-annually, with the remaining wells continued to be sampled quarterly. If you have any questions, call me at (510) 842-9136.

Sincerely,
CHEVRON PRODUCTS COMPANY

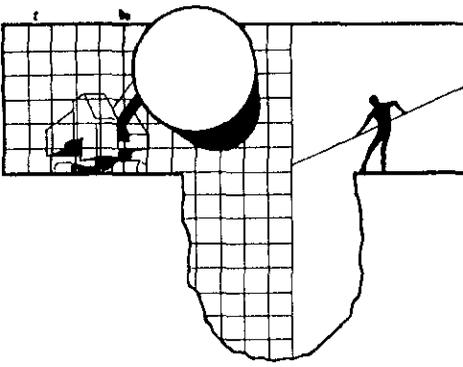

Philip R. Briggs
Site Assessment and Remediation Project Manager

Monitoring Performed on October 2, 1996

Groundwater Sampling Report 961002-C-1

This report covers the routine quarterly monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

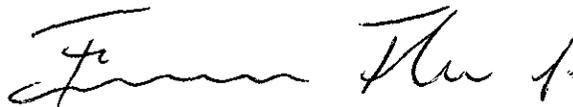

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table also contains new groundwater elevation calculations taken from the computer plotted gradient map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

Note: Blaine Tech Services, Inc. began routine monitoring of the groundwater wells at this site on November 1, 1994.

Earlier field data and analytical results are drawn from the November 23, 1994 Groundwater Technology, Inc. report.

ABBREVIATIONS:

TPH = Total Petroleum Hydrocarbons

MTBE = Methyl t-Butyl Ether

Please Note:
 The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

 The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

Blaine Tech Services, Inc. Client Project ID: Chevron 9-1583 / 961002-C1
 985 Timothy Drive Matrix: Liquid
 San Jose, CA 95133
 Attention: Jim Keller Work Order #: 9610195-07-08 Reported: Oct 18, 1996

QUALITY CONTROL DATA REPORT

Analyte: Diesel
QC Batch#: GC1007960HBPEXZ
Analy. Method: EPA 8015M
Prep. Method: EPA 3520

Analyst: J. Minkel
