Shell-branded Service Station

Incident #98995748
Cambria Project #246-0554-002

Dear Ms. Garcia-La Grille:

On behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell), Cambria Environmental Technology, Inc. (Cambria) is submitting this groundwater monitoring report in accordance with the reporting requirements of 23 CCR 2652d.

INTERIM REMEDIATION

One-Time Groundwater Extraction: On January 12, 2004, Cambria coordinated a one-time groundwater extraction event, using a vacuum truck to remove separate-phase hydrocarbons (SPH) and groundwater from well MW-6R prior to the monitoring event. Approximately 71 gallons of water with free product were removed in 40 minutes of extraction. After extraction, no SPH was observed in any site wells. Cambria and Blaine will continue to monitor site conditions for the presence of SPH.

THIRD QUARTER 2004 ACTIVITIES

Groundwater Monitoring: Blaine Tech Services, Inc. (Blaine) of San Jose, California gauged and sampled selected site wells, checked well MW-6R for SPH, calculated groundwater elevations, and compiled the analytical data. No SPH was detected in MW-6R. Cambria prepared a vicinity map which includes previously submitted well survey information (Figure 1) and a groundwater elevation contour map (Figure 2). Blaine's report, presenting the laboratory report and supporting field documents, is included as Attachment A.

At Shell's requests, samples were also analyzed for the oxygenates tert butyl alcohol (TBA), ethyl tert butyl ether, di-isopropyl ether, and tert amyl methyl ether. TBA was detected in samples from wells MW-1, MW-4, MW-5, and MW-9, at concentrations of 1,100 parts per billion (ppb), 2,200 ppb, 59 ppb, and 34 ppb, respectively. No other oxygenates were detected. Analytical results are summarized in Attachment A.

Joint Groundwater Monitoring: Blaine conducted groundwater monitoring concurrently with Thrifty Oil Company's (Thrifty) sampling event. Thrifty provided Cambria with summarized groundwater monitoring data. Since Thrifty's wells are surveyed only to an arbitrary datum, Cambria's groundwater elevation contour map (Figure 2) shows the Thrifty and Shell sites' groundwater contours independent of one another.

Agency Response: Shell received the Alameda County Health Care Services Agency's March 9, 2004 letter requesting that a feasibility study/corrective action plan be prepared. The letter also requested a response to five technical comments. Cambria's April 12, 2004 *Agency Response* letter responded to the technical comments and proposed the following:

- Conducting joint groundwater monitoring events with the adjacent Thrifty site,
- Obtaining copies of Thrifty site information from Thrifty or from an agency file review,
- Conducting additional vacuum truck operations events if free product is encountered in groundwater monitoring wells, and
- Preparing a revised conceptual site model (CSM) report.

Thrifty has agreed to conduct joint monitoring with Shell and to provide copies of requested information. Thrifty was unable to provide copies of requested information despite several requests. Cambria conducted an agency file review to obtain relevant data, and is preparing a report to address the agency concerns.

ANTICIPATED FOURTH QUARTER 2004 ACTIVITIES

Groundwater Monitoring: As proposed in the April 12, 2004 *Agency Response*, Blaine will attempt to coordinate monitoring with the adjacent Thrifty site, gauge and sample selected site wells, and tabulate the data. Cambria will prepare a monitoring report.

Revised CSM Report: Cambria will prepare and submit a revised CSM report.

Groundwater Monitoring Report **040721-SS-3**

This report covers the routine monitoring of groundwater wells at this Shell-branded facility. In accordance with standard procedures that conform to Regional Water Quality Control Board requirements, routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated purge volume (if applicable), elapsed evacuation time (if applicable), total volume of water removed (if applicable), and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater (if applicable) is, likewise, collected and transported to the Shell Martinez Manufacturing Complex.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL CONCENTRATIONS**. The full analytical report for the most recent samples and the field data sheets are attached to this report.

At a minimum, Blaine Tech Services, Inc. field personnel are certified on completion of a forty hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Abbreviations:

TPPH = Total petroleum hydrocarbons as gasoline by modified EPA Method 8260B; prior to April 27, 2001, analyzed by EPA Method 8015.

BTEX = Benzene, toluene, ethylbenzene, xylenes by EPA Method 8260B; prior to April 27, 2001, analyzed by EPA Method 8020.

MTBE = Methyl tertiary butyl ether

DIPE = Di-isopropyl ether, analyzed by EPA Method 8260B

ETBE = Ethyl tertiary butyl ether, analyzed by EPA Method 8260B

TAME = Tertiary butyl methyl ether, analyzed by EPA Method 8260B

TBA = Tertiary butyl alcohol, analyzed by EPA Method 8260B

TOC = Top of Casing Elevation

SPH = Separate-Phase Hydrocarbons

GW = Groundwater

DO = Dissolved Oxygen

Notes:

a = Chromatogram pattern indicates an unidentified hydrocarbon.

b = MTBE could not be quantified due to co-eluting compounds.

c = The highest recovery value for TPH has been reported, but this should be considered an estimate. Repeated analysis yielded inconsistent results

d = Hydrocarbon does not match pattern of laboratory's standard.

e = SPH present in well measured at less than 0.01 feet.

Visual inspection revealed the presence of distinct phases within the sample, indicating the possible presence of undissolved hydrocarbons.

* = This sample was analyzed outside the EPA recommended holding time.

When separate-phase hydrocarbons are present, groundwater elevations is adjusted using the equation:

Corrected Groundwater Elevation = Top of Casing Elevation - Depth to water + (0.8 x Hydrocarbon Thickness).

Resurvey of wells was performed on August 28, 1998 by Virgil Chavez Land Surveying of Vallejo, CA.

All wells except MW-11 surveyed February 26, 2001 by Virgil Chavez Land Surveying of Vallejo, CA.

Legend and Notes**Sample Comment**

Lab ID: 2004-07-0704 -10

gs-Siloxane peaks were found in the sample which are not believed to be gasoline related. If they were to be quantified as gasoline, concentration would be 62 ug/L.

Analysis Flag

o

Reporting limits were raised due to high level of analyte present in the sample.
