EXECUTIVE SUMMARY

- CRA drilled three soil borings (SB-13 through SB-15) during this investigation to evaluate soil conditions in the area of previous soil boring SB-10. ACEH requested that lead detections from this investigation and previous investigations be evaluated using the updated OEHHA CHHSL for soil with commercial land use.
- Total lead detections exceeded the OEHHA CHHSL in all samples collected from SB-13 through SB-15 at 1 fbg and in SB-13 and SB-15 at 2 fbg.
- We also note that during the October 2006 and January 2012 subsurface investigations total lead detections exceeded the OEHHA CHHSL in borings SB-1, SB-7, and SB-9 at 2 fbg and SB-10 at 1 fbg.
- We recommend four additional soil borings to further delineate total lead impacts in shallow soils and one additional soil boring behind the station building to collect background samples to evaluate the potential source of lead impacts.

1.0 INTRODUCTION

Conestoga-Rovers & Associates (CRA) prepared this report on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell) to document the recent subsurface investigation at this site. The purpose of the investigation was to evaluate soil conditions in the area of previous soil boring SB-10, as proposed in CRA's February 8, 2012 *Subsurface Investigation Report* (report). CRA followed the scope of work outlined in our report and procedures presented in our September 27, 2011 *Subsurface Investigation Work Plan* (work plan), as approved in Alameda County Environmental Health's (ACEH's) March 28, 2012 letter. ACEH also requested evaluation of lead concentrations using the updated California human health screening level (CHHSL) for total lead in soil with commercial land use developed by the California Office of Environmental Health Hazard Assessment (OEHHA; September 23, 2010).

ACEH's July 25, 2011 letter requested a soil vapor investigation proposal; however, the State Water Resources Control Board's low-threat underground storage tank closure policy¹ states that soil vapor investigations are not warranted at active service stations. The subject site is likely to remain a service station for the foreseeable future, so no soil vapor investigation is proposed at this time.

The subject site is a former Shell service station located at the southeast corner of the San Pablo Avenue and 35th Street intersection in a mixed commercial and residential neighborhood of Oakland, California (Figure 1). Shell sold the station and property in March 2005. The site is currently an operating third-party service station (Figure 2).

A summary of previous work performed at the site and additional background information was presented in our work plan and is not repeated herein.

2.0 INVESTIGATION RESULTS

2.1 PERMIT

CRA obtained a drilling permit from Alameda County Public Works Agency (Appendix A).

¹ *Low-Threat Underground Storage Tank Case Closure Policy*, State Water Resources Control Board, adopted May 1, 2012

2.2 DRILLING DATE

May 9, 2012.

2.3 DRILLING COMPANY

Gregg Drilling and Testing, Inc.

2.4 CRA PERSONNEL

Environmental scientist Cristina Arganbright directed the drilling activities under the supervision of California Professional Geologist Peter Schaefer.

2.5 DRILLING METHOD

Water-knife.

2.6 NUMBER OF BORINGS

Three soil borings (SB-13 through SB-15) were drilled during this investigation.

The boring specifications and soil types encountered are described on the boring logs contained in Appendix B. The boring locations are shown on Figure 2.

2.7 BORING DEPTHS

5.5 feet below grade (fbg).

2.8 WASTE DISPOSAL

Sludge generated during field activities was temporarily stored on site in a 55-gallon drum, sampled, and profiled for disposal. Waste confirmation documentation is pending and will be provided by CRA upon request. The laboratory analytical report is presented in Appendix C.

3.0 FINDINGS

3.1 SOIL

The soil chemical analytical data are summarized in Table 1, and total lead analytical results are presented on Figure 2. The laboratory analytical report is presented in Appendix C.

4.0 CONCLUSIONS

Total lead detections exceeded the OEHHHA CHHSL in all samples collected from SB-13 through SB-15 at 1 fbg and in SB-13 and SB-15 at 2 fbg. We also note that during the October 2006 and January 2012 subsurface investigations total lead detections exceeded the OEHHHA CHHSL in borings SB-1, SB-7, and SB-9 at 2 fbg and SB-10 at 1 fbg.

5.0 RECOMMENDATIONS

CRA recommends drilling four additional soil borings to further delineate total lead impacts in shallow soils and one additional soil boring behind the station building to collect background samples to evaluate the potential source of lead impacts. The proposed boring locations are shown in Figure 2, and we propose to follow the procedures detailed in our September 27, 2011 work plan, with the exception that the soil samples will be analyzed for lead only.

All of Which is Respectfully Submitted,

GC/MS VOA

Method(s) 8260B/CA_LUFTMS: Internal standard responses were outside of acceptance limits for the following sample(s): CRA-1 (440-9616-1). The sample(s) shows evidence of matrix interference.

Method(s) 8260B: Surrogate recovery for the following sample(s) was outside control limits: (440-9641-3 MS), (440-9641-3 MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries associated with batch 21930 were outside control limits: (440-9641-3 MS), (440-9641-3 MSD). Matrix interference is suspected.

Method(s) 8260B: Internal standard responses were outside of acceptance limits for the following sample(s): CRA-1 (440-9616-1). The sample(s) shows evidence of matrix interference.

No other analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 440-21838 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

Organic Prep

Method(s) CA LUFT: The following sample(s) was diluted prior to extraction due to the nature of the sample matrix: CRA-1 (440-9616-1). Elevated reporting limits (RLs) are provided.
