Re: SOIL SAMPLING AND EXCAVATION REPORT
Former Shell Service Station
2800 Telegraph Avenue
Oakland, California
WIC #204-5508-2303

Mr. Roller:

This Soil Sampling and Excavation Report summarizes field activities performed by GeoStrategies Inc. (GSI) during the removal of three hydraulic lifts and one oil/water separator at the above referenced site (Plate 1). Excavation and demolition activities were performed by Armer-Norman Inc. of Walnut Creek, California. Backfilling, compaction and soil disposal activities were performed by Gettler-Ryan Inc. of Hayward, California. A GSI geologist was present on-site to observe the removal work, and to obtain soil samples from the excavations and related soil stockpiles. A description of field procedures and sampling results are discussed in this report.

SITE DESCRIPTION, OBSERVATIONS AND RESULTS

The site was previously occupied by a Shell Service Station and is currently vacant. The underground storage tanks, product lines, dispenser islands and service station building were previously removed. The three hydraulic lifts and a 2-compartment oil/water separator remained after the initial site demolition. The hydraulic lifts and oil/water separator were located in the former service station building in the northeast corner of the site (Plate 2). This equipment was removed on June 18, 1992 and witnessed by a representative from the Alameda County Health Agency (ACHA). The three hydraulic lifts and oil/water separator appeared to be in good condition with no visible cracks or holes.

Page 2

Field Methods and Procedures

Soil samples were collected by pushing or hammering a clean stainless steel sample tube into the soil until completely filled. The tube was removed, covered at both ends with teflon tape and sealed with plastic end caps. The sample was then labeled, placed in a cooler with blue ice, entered on a chain-of-custody form and transported to Sequoia Analytical Laboratory, a State-certified laboratory located in Redwood City, California.

Soil samples from the hydraulic lifts and oil/water separator were collected with a backhoe bucket. The top 1 to 3 inches of soil was removed, then the sample was collected as described above.

Soil stockpile samples were collected by removing the top 6 to 12 inches of soil, then collecting the sample as described above.

The groundwater sample was collected using a clean, disposable, acrylic bailer to obtain the sample from the excavation. The groundwater was poured into four 1-liter glass bottles and three 40-milliliter glass vials and sealed with teflon-lined caps. The containers were inspected to insure that no air bubble were present. The sample was then handled as described above.

Product Piping

Soil samples ST-1 through ST-4 were collected from below the product piping at the dispenser islands at a depth of approximately 3 feet below grade. The samples were analyzed for TPH-Gasoline, BTEX and total lead.

TPH-Gasoline and BTEX were reported as ND for each sample. Total lead concentrations ranged from ND to 13 ppm. Sample locations are shown on Plate 3 and chemical analytical data are summarized in Table 1.

GeoStrategies Inc.

Shell Oil Company
November 30, 1992
Page 3

Oil/Water Separator

Soil sample SOW-1 was collected from the bottom of the oil/water separator excavation at a depth of approximately 5.5 feet below grade. The sample was analyzed for TPH-Diesel, TPH-Oil, Total Petroleum Hydrocarbons calculated as Gasoline (TPH-Gasoline) according to EPA Method 8015 (Modified), benzene, toluene, ethylbenzene and xylenes (BTEX) according to EPA Method 8020, Oil and Grease (O&G) according to ASTM Method 5520 E&F, Chlorinated Solvents (CL HC) according to EPA Method 8240 and ICAP metals according to EPA Method 6010.

TPH-Gasoline, TPH-Diesel, TPH-Oil and BTEX were reported as ND. The sample contained 68 ppm O&G and 5.1 ppm total lead. The sample location is shown on Plate 3 and chemical analytical data are summarized in Table 1.

Hydraulic Lifts

Soil samples SL-1, SL-2 and SL-3 were collected from the bottom of each excavation at depths of approximately 7.5, 8 and 8.5 feet, respectively. The samples were analyzed for Total Petroleum Hydrocarbons calculated as Diesel (TPH-Diesel) and Motor Oil (TPH-Oil) according to EPA Method 8015 (Modified).

TPH-Diesel and TPH-Oil were reported as not detected (ND) for samples SL-2 and SL-3. Sample SL-1 contained 40 parts per million (ppm) TPH-Diesel and 580 ppm TPH-Oil. Sample locations are shown on Plate 3 and chemical analytical data are summarized in Table 1.

Product Piping Soil Stockpile

Approximately 8 cubic yards of soil was removed from the product piping excavations and stockpiled near the center of the site (Plate 3). Soil sample SS-1A-B was collected from the stockpile. The sample was composed of two subsamples that were composited in the laboratory. The sample was analyzed for TPH-Gasoline, BTEX and organic lead according to the LUFT manual guidelines.

TPH-Gasoline, BTEX and organic lead were reported as ND for the sample. Chemical analytical data are summarized in Table 1.

GeoStrategies Inc.

Shell Oil Company
November 30, 1992
Page 4

Hydraulic Lift and Oil/Water Separator Soil Stockpile

Approximately 50 cubic yards of soil was removed from the hydraulic lift and oil/water separator excavations and stockpiled south of the excavations (Plate 3). Soil sample SWS-1A-D was collected from the stockpile. The sample was composed of four subsamples that were composited at the laboratory. The sample was analyzed for TPH-Gasoline, TPH-Diesel, BTEX, O&G and CL HC.

TPH-Gasoline and benzene were reported as ND. The sample contained 11 ppm TPH-Diesel and 260 ppm O&G. Chemical analytical data are summarized in Table 1.

OVEREXCAVATIONS

First Stage Overexcavation

Upon receipt of the chemical data, the area around samples SL-1 and SOW-1 were overexcavated. On July 10, 1992, a 7-foot by 7-foot excavation was dug around the original samples. Samples SL-1X and SOW-1X were collected at depths of approximately 10 feet and 8.5 feet below grade, respectively (Plate 3).

Sample SL-1X was analyzed for TPH-Oil and TPH-Diesel. Sample SOW-1X was analyzed for TPH-Gasoline, TPH-Diesel, BTEX, O&G, CL HC and ICAP metals.

Sample SL-1X contained 27 ppm TPH-Diesel and 340 ppm TPH-Oil. Sample SOW-1X contained 6.4 ppm TPH-Gasoline, 1.2 ppm TPH-Diesel and 59 ppm O&G, and was ND for BTEX and total lead. Chemical analytical data are summarized in Table 1.

In addition, soil stockpile sample SWS-2A-D was collected and analyzed for chemicals as per local sanitary landfill requirements for disposal.

Second Stage Overexcavation

Upon receipt of the chemical data for samples SL-1X and SOW-1X, additional overexcavation was initiated. The excavation was enlarged to 18 feet by 9 feet by 11.5 feet deep on August 18, 1992.

GeoStrategies Inc.

Shell Oil Company
November 30, 1992
Page 5

Soil samples SL-1Y and SOW-1Y were collected at a depth of approximately 10.5 feet below grade. In addition, groundwater sample SH-1 was collected at approximately 11.5 feet below grade. Sample locations are shown on Plate 3 and sample depths are shown in Table 3.

Sample SL-1Y was analyzed for TPH-Diesel and TPH-Oil. Samples SOW-1Y and SH-1 were analyzed for TPH-Gasoline, TPH-Diesel, BTEX and O&G. Sample SOW-1Y was also analyzed for CL HC and ICAP metals.

Samples SL-1Y and SOW-1Y were ND for all analyses. Groundwater sample SH-1 contained 0.11 ppm TPH-Gasoline and was ND for BTEX, TPH-Diesel and O&G. Chemical analytical are summarized in Table 1.

Approximately 40 cubic yards of soil generated by the second stage of overexcavation was stockpiled on-site (Plate 3). Sample SWS-3A-D was collected from the stockpile and was analyzed for TPH-Gasoline, TPH-Diesel, BTEX and O&G.

Sample SWS-3A-D contained 1.4 ppm TPH-Diesel, 98 ppm O&G and was ND for TPH-Gasoline and BTEX. Chemical analytical data are summarized in Table 1.

SOIL STOCKPILE DISPOSITION

Upon receipt of the chemical analytical data, the stockpiles were transported to the appropriate facility. Sample SS-1A-D was used to backfill the excavations dug in collecting samples ST-1 through ST-4.

Approximately 90 cubic yards of soil represented by samples SWS-1A-D through SWS-3A-D were transported to the Browning-Ferris Industries Landfill located in Livermore, California.

SITE DISPOSITION

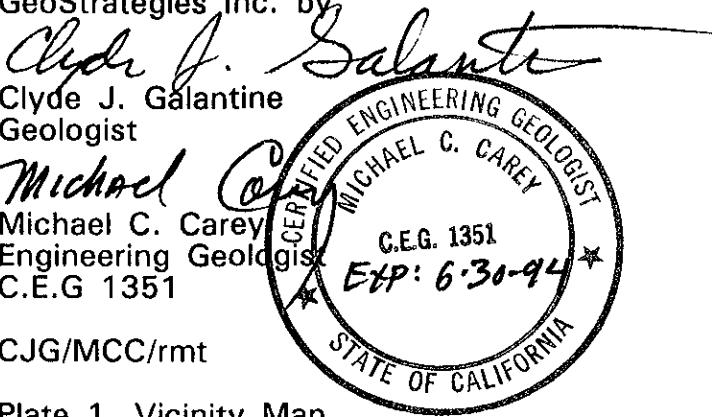

Upon completion of the overexcavation, the excavations on-site were backfilled and compacted by Gettler-Ryan Inc. of Hayward, California.

GETTLER-RYAN INC.
GENERAL CONTRACTOR

Project: 7610.05, Shell, Oakland

Enclosed are the results from 2 soil samples received at Sequoia Analytical on July 9, 1992. The requested analyses are listed below:

SAMPLE #	SAMPLE DESCRIPTION	DATE OF COLLECTION	TEST METHOD
2071378	Soil, SOW-1X	7/9/92	EPA 3550/8015 EPA 8240 SM 5520 E&F (Gravimetric) EPA 5030/8015/8020 Cd,Cr,Pb,Ni,Zn
2071377	Soil, SL-1X	7/9/92	EPA 3550/8015 EPA 3550/8015 as Motor Oil

Please contact me if you have any questions. In the meantime, thank you for the opportunity to work with you on this project.

Very truly yours,

TOTAL PURGEABLE PETROLEUM HYDROCARBONS with BTEX DISTINCTION

Analyte	Reporting Limit µg/L	Sample I.D. 207-1205 SWS-2A-D
Purgeable Hydrocarbons	50	N.D.
Benzene	0.50	N.D.
Toluene	0.50	N.D.
Ethyl Benzene	0.50	N.D.
Total Xylenes	0.50	N.D.

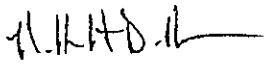

Chromatogram Pattern: --

Quality Control Data

Report Limit Multiplication Factor:	20
Date Analyzed:	7/14/92
Instrument Identification:	GCHP-3
Surrogate Recovery, %: (QC Limits = 70-130%)	106

Purgeable Hydrocarbons are quantitated against a fresh gasoline standard.
Analytes reported as N.D. were not detected above the stated reporting limit.

Project: 7610.05, Shell, Oakland

Enclosed are the results from 1 soil sample received at Sequoia Analytical on August 18, 1992. The requested analyses are listed below:

SAMPLE #	SAMPLE DESCRIPTION	DATE OF COLLECTION	TEST METHOD
2082969	Soil Composite, SWS-3A-D	8/18/92	SM 5520 E&F (Gravimetric)

Please contact me if you have any questions. In the meantime, thank you for the opportunity to work with you on this project.

Very truly yours,

SEQUOIA ANALYTICAL
