Re: First Quarter 2011 Monitoring Report, Former BP Service Station #11132, 3201 35th Avenue, Oakland, Alameda County, California; ACEH Case #RO0000014

Dear Ms. Phillips:

Attached is the First Quarter 2011 Monitoring Report for Former BP Service Station #11132 located at 3201 35th Avenue, Oakland, California. Should you have questions regarding the work performed or results obtained, please do not hesitate to contact us at (530) 566-1400.

Sincerely,
BROADBENT & ASSOCIATES, INC.

**FIRST QUARTER 2011 MONITORING REPORT
FORMER BP SERVICE STATION #11132, OAKLAND, CALIFORNIA**

Broadbent & Associates, Inc. (BAI) is pleased to present this *First Quarter 2011 Monitoring Report* on behalf of ARCADIS-US, Inc. and Atlantic Richfield Company (a BP affiliated company) for Former BP Service Station #11132 located in Oakland, Alameda County, California. Monitoring activities at the site were performed in accordance with the reporting requirements issued by the Alameda County Environmental Health Services Agency (ACEH). Details of work performed, discussion of results, and recommendations are provided below.

| | |
|-------------------------------------|---|
| Facility Name / Address: | Former BP Service Station #11132 / 3201 35 th Avenue, Oakland |
| Client Project Manager / Title: | Ms. Hollis Phillips, PG |
| BAI Contact: | Jason Duda, (530) 566-1400 |
| BAI Project No.: | 09-88-655 |
| Primary Regulatory Agency / ID No.: | ACEH, Case #RO0000014 |
| Current phase of project: | Monitoring |
| List of Acronyms / Abbreviations: | See end of report text for list of acronyms/abbreviations used in report. |

WORK PERFORMED THIS QUARTER (First Quarter 2011):

1. Submitted *Fourth Quarter 2010 Status Report*.
2. Conducted groundwater monitoring/sampling for First Quarter 2011 on March 15, 2011.

WORK SCHEDULED FOR NEXT QUARTER (Second Quarter 2011):

1. Submit *First Quarter 2011 Monitoring Report* (contained herein).
2. No environmental work is scheduled for Second Quarter 2011.

ADDITIONAL WORK RECOMMENDED FOR NEXT QUARTER (Second Quarter 2011)

1. None.

GROUNDWATER MONITORING PLAN SUMMARY:

| | | |
|--|---|--------------------------|
| Groundwater level gauging: | MW-1 through MW-10, RW-1 | (Semi-Annually: 1Q & 3Q) |
| Groundwater sample collection: | MW-1, MW-2, MW-5, MW-8, MW-9, MW-10, and RW-1 | (Semi-Annually: 1Q & 3Q) |
| | MW-3, MW-4, MW-6, and MW-7 | (Annually: 1Q) |
| Biodegradation indicator parameter monitoring: | ORP, pH | (Semi-Annually: 1Q & 3Q) |

QUARTERLY RESULTS SUMMARY:

LNAPL

| | | |
|-------------------------------|--------------------------|----------|
| LNAPL observed this quarter: | Yes MW-10 | (yes/no) |
| LNAPL recovered this quarter: | None | (gal) |
| Cumulative LNAPL recovered: | 234.3 (FP/water mixture) | (gal) |

Groundwater Elevation and Gradient:

| | | |
|------------------------------|--------------------------|-----------------------------|
| Depth to groundwater: | 10.08 MW-6 to 16.47 MW-4 | (ft below TOC) |
| Gradient direction: | Southeast | (compass direction) |
| Gradient magnitude: | 0.01 | (ft/ft) |
| Average change in elevation: | 6.62 | (ft since last measurement) |

Laboratory Analytical Data

| | |
|----------|---|
| Summary: | GRO was detected in MW-1, MW-2, MW-5, MW-8, MW9 and RW-1. Benzene was detected in MW-2, MW-5, MW-8, MW-9 and RW-1. Toluene was detected in MW-2 and MW-5. Ethylbenzene was detected in MW-1, MW-2, MW-5, MW-8, MW-9 and RW-1. Total Xylenes were detected in MW-1, MW-2, MW-5, MW-8, MW-9 and RW-1. MTBE was detected in MW-1, MW-2, MW-4, MW-5, MW-7 and RW-1. TBA was detected in MW-4 and MW-7. TAME was |
|----------|---|

detected in MW-7. Other petroleum hydrocarbon constituents were below laboratory reporting limits.

ACTIVITIES CONDUCTED & RESULTS:

First Quarter 2011 groundwater monitoring was conducted on March 15, 2011 by BAI personnel in accordance with the monitoring plan summarized above. No irregularities were noted during water level gauging. Light, Non-Aqueous Phase Liquid (LNAPL, or Free Product) was noted to be present in well MW-10 during this event (<0.01 ft). Depth to water measurements ranged from 10.08 ft at MW-6 to 16.47 ft at MW-4. Resulting groundwater surface elevations ranged from 153.22 ft at MW-7 to 155.40 ft at MW-3. Groundwater elevations are summarized in Table 1. Water level elevations yielded a potentiometric groundwater flow direction and horizontal gradient to the southeast at approximately 0.01 ft/ft. Field methods used during groundwater monitoring are provided in Appendix A. Field data sheets are included in Appendix B. A Site Location Map is presented as Drawing 1. Potentiometric groundwater elevation contours are presented in Drawing 2.

Groundwater samples were collected on March 15, 2011, consistent with the current monitoring schedule. No irregularities were reported during sampling with the exception that MW-10 was not sampled due to the presence of LNAPL. Samples were submitted under chain-of-custody protocol to TestAmerica Laboratories, Inc. (Pleasanton, California) for analysis of Gasoline-Range Organics (GRO, C6-C12) by EPA Method 8015M; for Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX), Methyl Tertiary Butyl Ether (MTBE), Ethyl Tertiary Butyl Ether (ETBE), Tert-Amyl Methyl Ether (TAME), Di-Isopropyl Ether (DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Tert-Butyl Alcohol (TBA) and Ethanol by EPA Method 8260. There were no significant irregularities reported by the laboratory. The laboratory analytical report, including chain-of-custody documentation, is provided in Appendix C.

Hydrocarbons in the GRO range were detected above the laboratory reporting limit in six wells sampled at concentrations up to 63,000 micrograms per liter ($\mu\text{g/L}$, parts per billion, ppb) in well MW-2. Benzene was detected above the laboratory reporting limit in five wells sampled at concentrations up to 12,000 $\mu\text{g/L}$ in well MW-2. Toluene was detected above the laboratory reporting limit in three wells sampled at concentrations up to 2,900 $\mu\text{g/L}$ in well MW-2. Ethylbenzene was detected above the laboratory reporting limit in six of the wells sampled at concentrations up to 4,100 $\mu\text{g/L}$ in well MW-2. Total Xylenes was detected above the laboratory reporting limit in six wells sampled at concentrations up to 15,000 $\mu\text{g/L}$ in well MW-2. MTBE was detected above the laboratory reporting limit in six wells sampled at concentrations up to 990 $\mu\text{g/L}$ in well MW-7. TAME was detected above the laboratory reporting limit in one of the wells sampled at a concentration of 17 $\mu\text{g/L}$ in well MW-7. 1,2-DCA was detected above the laboratory reporting limit in one of the wells sampled at a concentration of 0.81 $\mu\text{g/L}$ in well MW-7. TBA was detected above the laboratory reporting limit in two wells sampled at concentrations up to 130 $\mu\text{g/L}$ in well MW-7. The remaining analytes were not detected above their laboratory reporting limits in the wells sampled this last monitoring event. LNAPL was observed to be present in well MW-10. BAI personnel bailed MW-10 and reported the LNAPL thickness to be approximately 2 millimeters thick.

Groundwater monitoring laboratory analytical results are summarized in Table 1 and Table 2. The results of the laboratory analysis of the inorganic compounds can be found in the laboratory analytical report in Appendix C. The most recent GRO, Benzene, and MTBE concentrations are also presented in Drawing 2. Groundwater monitoring data (GEO_WELL) and laboratory analytical results (EDF) were uploaded to the GeoTracker AB2886 database. Upload confirmation receipts are provided in Appendix D.

DISCUSSION:

Groundwater levels were between historic minimum and maximum elevations during First Quarter 2011. Groundwater elevations yielded a potentiometric groundwater flow direction and horizontal gradient to the southeast at approximately 0.01 ft/ft, within the variable range of historic flow direction and gradient data presented in Table 3.

This event's detected analytical concentrations were within the historic minimum and maximum ranges recorded for each well, with the following exceptions: GRO reached historic minimum in well MW-1 with a concentration of 4,500 µg/L; Benzene reached historic minimum in well MW-1 with a concentration of non-detect; Ethylbenzene reached historic minimum in well MW-1 with a concentration of 56 µg/L; Total Xylenes reached historic minimum in wells MW-1 and MW-8 with concentrations of 30 µg/L and 3,000 µg/L respectively; MTBE reached historic maximum in well MW-7 with a concentration of 990 µg/L. Recent and historic laboratory analytical results are summarized in Table 1 and Table 2.

RECOMMENDATIONS:

Based on the site concentration trends observed in the wells associated with the Site, it is recommended to resume the current scheduling event. The next semi-annual monitoring and sampling event is scheduled to be conducted during the Third Quarter of 2011.

LIMITATIONS:

The findings presented in this report are based upon observations of field personnel, points investigated, results of laboratory tests performed by TestAmerica Laboratories, Inc. (Pleasanton, California), and our understanding of ACEH requirements. Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of ARCADIS-US, Inc. and Atlantic Richfield Company (a BP affiliated company). It is possible that variations in soil or groundwater conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

Symbols & Abbreviations:

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

ft MSL = Feet above mean sea level

GRO = Gasoline range organics

GWE = Groundwater elevation measured in ft MSL

mg/L = Milligrams per liter

MTBE = Methyl tert-butyl ether

NP = Well not purged prior to sampling

P = Well purged prior to sampling

TOC = Top of casing measured in ft MSL

TPH-g = Total petroleum hydrocarbons as gasoline

µg/L = Micrograms per liter

SEQ/SEQM= Sequoia Analytical/Sequoia Analytical Morgan Hill (Laboratories)

SPH = Separate phase hydrocarbons

CEL = Calscience Environmental Laboratories

Footnotes:

a = Casing elevations surveyed to the nearest 0.01 ft MSL

b = GWE adjusted assuming a specific gravity of 0.75 for free product (FP)

c = Blind duplicate.

d = A copy of the documentation for this data is included in Appendix C of Alisto report 10-024-10-001

e = Well inaccessible

f = Travel blank

g = EPA Methods 8020/8260 used

h = Unable to sample

i = A copy of the documentation for this data can be found in Blaine Tech Services report 010607-M-3. MTBE data for the January 13, 1993 and April 23, 1993 sampling events has been destroyed. No chromatograms could be located for MTBE data from wells MW-5, MW-6, and MW-7, sampled on October 21, 1993

j = Well not sampled due to presence of SPH and nature of the product

k = Could not purge and sample; waste drum full

l = Value represents the depth to product. Unable to determine depth to water, product disabled the interface probe.

m = Discrete p[ak @ C6-7

n = TPH-g, BTEX, and MTBE analyzed by EPA method 8260 B beginning on 1st quarter 2003 aampling event (1/29/03)

o = Groundwater samples are not collected during FP bailing event

p = Well not included in the monthly FP bailing program

q = Well not sampled in November 2003 due to the presence of a pile of gravel dumped over the well box

r = This sample was analyzed beyond the EPA recommended holding time. The results may still be useful for their intended purpose

s = MW-7 TOC elevation raised +0.47 ft during well repair on January 20, 2004

t = Sheen in well

u = Calib. verif. is within method limits but outside contract limits

v = GRO result partly due to individual peak(s) in quantitation range

w = DO meter not working at time of measurement

x = DO measurement suspect

y = Sample dilution was done with headspace in the sample vial. The samples were originally analyzed from VOAs without headspace

Notes:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12

Values for DO and pH were obtained through field measurements

GRO analysis was completed by EPA method 8260B (C4-C12) for samples collected from the time period April 2006 through February 4, 2008. The analysis for GRO was changed to EPA method 8015B (C6-C12) for samples collected from the time period February 5, 2008 through the present

The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information

Symbols & Abbreviations:

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

1,2-DCA = 1,2-Dichloroethane

DIPE = Di-isopropyl ether

EDB = 1,2-Dibromoethane

ETBE = Ethyl tert-butyl ether

MTBE = Methyl tert-butyl ether

TAME = tert-Amyl methyl ether

TBA = tert-Butyl alcohol

µg/L = Micrograms per Liter

Footnotes:

a = The result for TBA was reported with a possible high bias due to the continuing calibration verification falling outside acceptance criteria

b = The continuing calibration verification for ethanol was outside of client contractual acceptance limits. However, it was within method acceptance limits. The data should still be useful for its intended purpose

Notes:

All volatile organic compounds analyzed using EPA Method 8260B

The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information

Symbols & Abbreviations:

< = Not detected at or above specified laboratory reporting limit

ORP = Oxygen reduction potential

DO = Dissolved oxygen

CO₂ = Carbon dioxide

S₂- = Soluble Sulfide

mV = Millivolts

µg/L = Micrograms per liter

mg/L = Milligrams per liter

BV = Sample received after holding time expired

APPENDIX A
FIELD METHODS

BROADBENT & ASSOCIATES INC. FIELD PROCEDURES

A.1 QUALITY ASSURANCE/QUALITY CONTROL FIELD PROTOCOLS

Field protocols have been implemented to enhance the accuracy and reliability of data collection, ground-water sample collection, transportation and laboratory analysis. Discussion of these protocols is provided below.

A.1.1 Water Level & Free-Product Measurement

Prior to ground-water sample collection from each monitoring well, the presence of separate-phase hydrocarbons (SPH or free product, FP) and depth to ground water shall be measured. Depth to ground water will be measured with a standard water level indicator that has been decontaminated prior to its use in accordance with procedures discussed below. Depth to groundwater will be gauged from a saw cut notch at the top of the well casing on each well head. Where FP is suspected, the initial gauging will be done with an oil-water interface probe. Once depth to water has been measured, the first retrieval of a new disposable bailer will be scrutinized for the presence of SPH/FP.

A.1.2 Monitoring Well Purging

Subsequent to measuring depth to ground water and prior to the collection of ground-water samples, purging of standing water within the monitoring well will be performed if called for. Consistent with the American Society for Testing and Materials (ASTM) Standard D6452-99, Section 7.1, the well will be purged of approximately three wetted-casing volumes of water, or until the well is dewatered, or until monitored field parameters indicate stabilization. The well will be purged using a pre-cleaned disposable bailer or submersible pump and disposable plastic tubing dedicated to each individual well. The well will be purged at a low flow rate to minimize the possibility of purging the well dry. So that the sample collected is representative of formation water, several field parameters will be monitored during the purging process. The sample will not be collected until these parameters (i.e. temperature, pH, and conductivity) have stabilized to within 10% of the previously measured value. If a well is purged dry, the sample should not be collected until the well has recovered to a minimum 50% of its initial volume.

A.1.3 Ground-Water Sample Collection

Once the wells are satisfactorily purged, water samples will be collected from each well. Water samples for organic analyses will be collected using a pre-cleaned, new, disposable bailer and transferred into the appropriate, new, laboratory-prepared containers such that no head space or air bubbles are present in the sample container (if appropriate to the analysis). The samples will be properly labeled (i.e. sample identification, sampler initials, date/time of collection, site location, requested analyses), placed in an ice chest with bagged ice or ice substitute, and delivered to the contracted analytical laboratory.

A.1.4 Surface Water Sample Collection

Unless specified otherwise, surface water samples will be collected from mid-depth in the central area of the associated surface water body. Water samples will be collected into appropriate, new, laboratory-prepared containers by dipping the container into the surface water unless the container has a preservative present. If a sample preservative is present, a new, cleaned non-preserved surrogate container will be used to obtain the sample which will then be directly transferred into a new, laboratory-provided, preserved container. Samples will be properly labeled and transported as described above.

A.1.5 Decontamination Protocol

Prior to use in each well, re-usable ground-water sampling equipment (e.g., water level indicator, oil-interface probe, purge pump, etc.) will be decontaminated. Decontamination protocol will include thoroughly cleaning with a solution of Liquinox, rinsing with clean water, and final rinsing with control water (potable water of known quality, distilled, or de-ionized water). Pre-cleaned new disposable bailers and disposable plastic tubing will be dedicated to each individual well.

A.1.6 Chain of Custody Procedures

Sample identification documents will be carefully prepared so identification and chain of custody can be maintained and sample disposition can be controlled. The sample identification documents include Chain-of-Custody (COC) records and Daily Field Report forms. Chain of custody procedures are outlined below.

Field Custody Procedures

The field sampler is individually responsible for the care and custody of the samples collected until they are properly transferred.

Samples will have unique labels. The information on these labels will correspond to the COC which shows the identification of individual samples and the contents of the shipping container. The original COC will accompany the shipment and a copy will be retained by the field sampler.

Transfer of Custody and Shipment

A COC will accompany samples during transfer and shipment. When transferring samples, the individual relinquishing and the individual receiving the samples will each sign, date, and note the time on the COC. This documents the sample custody transfer.

Samples will be packaged properly for shipment and dispatched to the appropriate laboratory for analysis, with a separate COC accompanying each shipment. Shipments will be accompanied by the original COC. Samples will be delivered by BAI personnel to the laboratory, or shipped by responsible courier. When a shipping courier is utilized, the sample shipment number will be identified on the COC.

A.1.7 Field Records

In addition to sample identification numbers and COC records, Daily Field Report records will be maintained by field staff to provide daily records of significant events, observations, and measurements during field investigations. These documents will contain observed information such as: the personnel present, site conditions, sampling procedures, measurement procedures, calibration records, equipment used, supplies used, etc. Field measurements will be recorded on the appropriate forms. Entries on the data forms will be signed and dated. The data forms will be kept as permanent file records.

TestAmerica Job ID: 720-33879-1

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| D | Listed under the "D" column to designate that the result is reported on a dry weight basis. |
| EPA | United States Environmental Protection Agency |
| ND | Not Detected above the reporting level. |
| MDL | Method Detection Limit |
| RL | Reporting Limit |
| RE, RE1 (etc.) | Indicates a Re-extraction or Reanalysis of the sample. |
| %R | Percent Recovery |
| RPD | Relative Percent Difference, a measure of the relative difference between two points. |

| Question | Answer | Comment | |
|--|--------|---------|----|
| Radioactivity either was not measured or, if measured, is at or below background | N/A | | 1 |
| The cooler's custody seal, if present, is intact. | N/A | | 2 |
| The cooler or samples do not appear to have been compromised or tampered with. | True | | 3 |
| Samples were received on ice. | True | | 4 |
| Cooler Temperature is acceptable. | True | | 5 |
| Cooler Temperature is recorded. | True | | 6 |
| COC is present. | True | | 7 |
| COC is filled out in ink and legible. | True | | 8 |
| COC is filled out with all pertinent information. | True | | 9 |
| Is the Field Sampler's name present on COC? | True | | 10 |
| There are no discrepancies between the sample IDs on the containers and the COC. | True | | 11 |
| Samples are received within Holding Time. | True | | 12 |
| Sample containers have legible labels. | True | | 13 |
| Containers are not broken or leaking. | True | | 14 |
| Sample collection date/times are provided. | True | | |
| Appropriate sample containers are used. | True | | |
| Sample bottles are completely filled. | True | | |
| Sample Preservation Verified | N/A | | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | | |
| VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter. | True | | |
| If necessary, staff have been informed of any short hold time or quick TAT needs | True | | |
| Multiphasic samples are not present. | True | | |
| Samples do not require splitting or compositing. | True | | |
