San Leandro

PO17

3-14-95

MEETING NOTES :

- ✓ (1) agreed to reinstate calculation of GW flow/gradient
- ✓ (2) wells to be surveyed to MSL (if not already)
- (3) "Rapid site assessment" tools encouraged to qualitatively assess plume, with follow-up w/ permanent wells - "OK" to use non-certified analysis during qualitative phase - certified <sup>lab</sup> ~~test~~ to be used with completed well samples.
- (4) "Geo probe" vs. "hydropunch" discussed. Require that whichever tool chosen will be suitable for both determining geology and GW sample collection.
- (5) discussed "active" vs. passive CAP. " applicability of "N.A.A." - appears only applicable under Category II.
- (6) Discussed choice of eventual CAP will be based on cost-effectiveness, feasibility and business objectives (i.e., how quickly do they want to go before closure?)
- (7) Stay sampling of MW-1 and -2 - only use for gauging DTW and calculating GW flow/gradient
