Hi Joe,

Good point. Since the wells were sampled once this year and concentrations did not change (non-detectable) and haven't changed since August 2007, please initiate annual sampling in September 2011 for these two wells. The lack of detectable concentrations in MW-12 since 1995, and the largely nondetectable or rare low concentrations in well MW-14 since early 2006 or earlier also indicates the wells can be eliminated in this year's September event. Hope this helps.

Subject: EZ Serve 100877, 525 W. A St., Hayward - Semi-Annual Groundwater Monitoring

Hi Mark,

GESI will be onsite on Thursday September 9, 2010 to complete semi-annual groundwater monitoring. As requested in your 8/16/10 letter, we attempted to coordinate these activities with the consultant for Prime Properties at 580 W. A St. We were informed by Gary Aquiar of Hydro Analysis that their 3Q10 sampling was conducted between 8/13 and 8/16. We will attempt to coordinate the next sampling event. During this event, we will collect 1-liter amber bottles for analysis of TPH-Diesel Fuel.

One question – Your letter states that wells MW-12 and MW-14 should be sampled on an annual basis during the 3Q. These two wells were sampled during 1Q10 event. Please verify that you want them sampled again this year (during the 3Q10 event).
