Duration: 0 hours

Spoke with Joe Schaaf regarding 525 W A Street Hayward site. He requested an extension to submit the Excavation Report. He also said "based upon a meeting onsite with Mr. Steven Plunkett earlier in the year, it was agreed to prepare a work plan to conduct additional groundwater assessment activities to the west of the site to define the lateral extent of dissolved phase contaminants and to replace well MW-2 that was destroyed prior to the station construction. It is proposed to complete additional assessment in two phases: 1) collect several hydropunch groundwater samples using a Geoprobe; 2) Based upon the hydropunch sample results, install one or more groundwater monitoring wells to the west of the site on the adjacent property."
