**Subject:** RE: Pacific Renaissance Plaza Closure

Mark: Thank you for this information. Here are some items that I'd like to discuss with you upon your return:

- Please submit copies of the well construction logs for the wells other than #7,20 &21 which are included in the well closure report. ie #12,18,19,3,5,9,10,11&19
- Are there any summaries of soil and gw removal? Soil removal is based upon estimated soil removal and an agreement for soil disposal, right? Where did you get the gw disposal volume number?
- Do you have any HVOC groundwater data (the most recent data preferred)
- Can you clarify when the insitu remediation ran, ?-5/30/1990, then from 11/26/90-7/91 during excavation? Is this correct?
- Could you tell me what the address of the EBMUD site is and what the RB # is, is there a typo on the original # RB 01S0177? Our office would like to close this site also, since the wells which will be closed were also used for this case. I think the County will have to open a case for the EBMUD before we close it.

Talk to you later.

**Subject:** Pacific Renaissance Plaza Closure

Barney,

Attached is a copy of your closure report with some recommended changes I've added to help fill in the data gaps you encountered. I will fax copies of selected pages from the reports to you today so you can see the sources for the information. This should answer most of the questions you had for the closure report. I left the ground water data for the 1980 tank removal blank because we don't have the latest reports for the groundwater monitoring. We have contacted the company (Mactec) that now owns Harding Lawson Associates records. They should have word for us in about a week if they have copies of the final reports. If not, we'll have to use the groundwater data in the available reports to fill in that section. Let me know if there is anything else you need to complete the closure process.

Thanks,

Mark Arniola, P.G., R.E.A.
