Re: **Chevron Service Station #9-4587**  
**609 Oak Street, Oakland, CA**

310# 373

Dear Ms. Eberle:

Enclosed is the Groundwater Monitoring and Sampling Activities report dated January 28, 1994, prepared by our consultant Groundwater Technology, Inc. for the above referenced site. As indicated in the report, ground water samples collected were analyzed for total petroleum hydrocarbons as gasoline and BTEX.

**It should be noted that the analyses for the rinseate blank sample detected hydrocarbons.** This may indicate that the low concentrations of BTEX constituents detected in monitor wells C-3 through C-7 are the result of improper decontamination procedures. Concentrations of hydrocarbons in these wells have historically been below method detection limits.

Exclusive of monitor wells C-3 through C-7, concentrations of dissolved hydrocarbon constituents in the ground water samples collected were consistent with previous observations at the site. Separate-phase hydrocarbons were detected in monitor well CR-1 and tank pit backfill wells C-B and C-C at measured thicknesses of 0.02, 0.20, and 0.07 feet, respectively. Depth to ground water was measured at approximately 8.3 to 9.8 feet below grade and the direction of flow is to the southeast.

The ground water extraction system at this site was started on November 8, 1994, and ran until November 17, 1994, when carbon breakthrough was observed between the first and second vessels. We expect to have the carbon profiled for regeneration and new carbon at the site within the next two weeks.

We are currently working with the dealer to schedule a vacuum truck to remove highly contaminated ground water and separate phase hydrocarbons from the permeable backfill material. This involves vacuuming ground water through one of the tank pit backfill wells and disposing of the water at an approved off-site facility.

Removal of the underground storage tanks and product lines is scheduled for May 16, 1994. At that time, we anticipate performing overexcavation activities to remove impacted soils from the site.

If you have any questions or comments, please do not hesitate to contact me at (510) 842-8134.

when?  
plans?

SUBJECT: *Groundwater Monitoring and Sampling Activities*  
Chevron Service Station No. 9-4587  
609 Oak Street, Oakland, California

Dear Mr. Miller:

Groundwater Technology, Inc. presents the attached quarterly groundwater monitoring and sampling data collected on December 23, 1993. Ten of the 11 groundwater monitoring wells at this site were gauged to measure depth to groundwater (DTW) and to check for the presence of separate-phase hydrocarbons. Monitoring well C-A could not be located. Separate-phase hydrocarbons were detected in monitoring wells CR-1, C-B, and C-C at thicknesses of 0.02 foot, 0.20 foot, and 0.07 foot, respectively. A potentiometric surface map (Figure 1) and a summary of groundwater monitoring data (Table 1) are presented in Attachments 1 and 2, respectively. After the DTW was measured, each monitoring well, except monitoring wells CR-1, C-A, C-B, and C-C, was purged and sampled. Field data sheets are presented in Attachment 3. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, and xylenes, and for total petroleum hydrocarbons-as-gasoline. Results of the chemical analyses are summarized in Table 1. The laboratory report and chain-of-custody record are included in Attachment 4. The results of a monthly product bailing program for monitoring wells CR-1, C-1, C-C, and C-B are presented in Table 2. Monitoring-well purge water was transported by Groundwater Technology to the Chevron Terminal in Richmond, California, for recycling.

Groundwater Technology is pleased to assist Chevron on this project. If you have any questions or comments, please contact our Concord office at (510) 671-2387.

Sincerely,  
**Groundwater Technology, Inc.**
