Ms. Madhulla Logan  
Alameda County Health Care Services  
Department of Environmental Health  
1131 Harbor Way Parkway, Suite 250  
Alameda, CA 94502-6577

Subject: Risk Assessment & Threshold Limits  
Former Chevron Service Station #9-4587  
609 Oak Street  
Oakland, CA

Dear Ms. Logan:

As per your request, and to clarify the information regarding the hand augered soil samples and resultant risk model, I am forwarding the following:

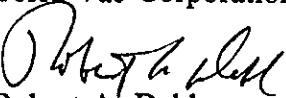

- 1) A revised soil sample table, with the addition of the results of the hand augered samples;  
*given in Table 1 (140 ppm)*
- 2) GSI-RBCA printouts for inhalation risk from benzene residual in subsurface soil, using the sample results included. The 1987 composite sample has been excluded and the four hand augered samples have been used with the three other vadose zone samples. The GSI software gives the option of utilizing the maximum concentration, the mean or the upper confidence limit mean of the sample set, but does not calculate the actual average. The representative concentration in the soil, shown as 0.27 mg/kg benzene, differs significantly from the average of 3.6 mg/kg. Both values, though, are below the 4.1 mg/kg SSTL derived to keep from exceeding a  $10^{-5}$  risk.
- 3) The GSI printout for site-specific parameters utilized for SSTL derivation. Modifications include the porosity value of 0.31 (as determined by PTS Laboratories on a sample from five feet below grade at DVE-3), building volume to area ratio of 450 for a typical commercial unit of 14 foot height and 8 foot drop ceilings, a building air exchange rate of two exchanges per hour (as per the Uniform Building Code), a reduction of the crack fraction to 0.005, and an exposure duration of 5.7 years for commercial (based on 8 hour workdays, 50 weeks per year over 25 years).

Utilizing this site specific data, the management plan threshold limits can be revised upward. Even with the more conservative risk basis of  $10^{-6}$  for groundwater, an average of 720 ppb benzene (the SSSL calculated with the GSI software) in groundwater samples from the listed onsite wells of C-1, C-2 and CR-1 would require notification to Alameda County, resampling and, if initial results are confirmed, a reevaluation of site conditions and further activities.

If you have any questions or comments, please call me at (510) 351-8900.

Sincerely,  
Terra Vac Corporation

  
Robert A. Dahl  
Project Manager

Management Plan Threshold Limits  
Former Chevron Station 9-4587  
609 Oak Street  
Oakland, CA

Well ID	Benzene Concentration Highest Observed (ppb)	Benzene Concentration 12/19/96 (ppb)	Benzene Concentration Threshold Limit (ppb)
C-1	11,000	<0.5	*720
C-2	8,200	<0.5	*720
C-5	330	4.2	100
CR-1	9400	0.9	*720
			*as average for onsite
