Attention: Richard K. Robbins

Gentlemen:

**Report - Second Quarter Ground-Water Quality Monitoring**  
**1600 63rd Street**  
**Emeryville, California**

This report presents the results of second quarter ground-water monitoring conducted by Harding Lawson Associates (HLA) at 1600 63rd Street, Emeryville, California (Plate 1). HLA installed five ground-water monitoring wells at this site in May and June 1989. The results of initial ground-water sampling and analyses and water-level measurements are presented in HLA's October 2, 1989 report, *Ground-Water Quality Investigation, 1600 63rd Street, Emeryville, California*, together with a summary of investigations and remediation of the site performed by HLA and others.

Ground-water monitoring will continue at the site for one year in accordance with the procedures and recommendations outlined in the October 2 report. Monitoring comprises monthly water-level and product level (if present) measurement and quarterly ground-water sampling and chemical analyses for a suite of analytes.

**GROUND WATER LEVEL MONITORING AND SAMPLING**

Water levels were measured in the wells on September 21 and October 20, 1989. An electronic oil-water interface probe was used to measure ground-water level and product thickness in the monitoring wells. The ground water surface in each well was also visually inspected for the presence of floating product by carefully lowering a clear lucite bailer into the well, removing it, and observing the water/product in the bailer. No product was observed in any of the wells on either date.

On September 21, 1989, after water levels were measured, the wells were purged using a PVC bailer. Approximately 24 and 28 gallons of water were removed from Wells MW-1 and MW-2, respectively (about three well casing volumes). Wells MW-3,

Mr. Richard K. Robbins  
Page 2

MW-4, and MW-5 were purged of 27, 28, and 34 gallons of water, respectively (about 2 well casing volumes), at which point they were dry. The wells were allowed to recover about five or six hours, until the water level had risen to within 80 percent of the initial water level. Measurements of pH, conductivity, turbidity, and temperature were taken during well purging. In Wells MW-1 and MW-2, purging was continued until these parameters had stabilized, thus indicating that stagnant water in the well had been removed. All purge water was placed in 55-gallon steel drums and stored on site in a steel containment structure.

Water samples were collected from the wells using a stainless steel bailer and decanted in three 40-milliliter volatile organic analysis vials, three 1-liter amber glass bottles, and, for the metals analyses, one 250-ml plastic bottle containing nitric acid. These sample bottles were labeled, placed in a refrigerated environment, and transported under chain of custody to the analytical laboratory.

All water-level measurement and sampling equipment was decontaminated prior to use by washing in a low-phosphorous soap and double rinsed in tap water. Water used to clean and rinse the equipment was contained and stored on site within the containment structure.

#### **GROUND-WATER GRADIENT AND FLOW DIRECTION**

Ground-water elevations and product thicknesses measured throughout this investigation are presented in Table 1. The water table appears to be fluctuating in response to precipitation-induced recharge. The water table typically rises following precipitation and declines during dry periods. The change in water level elevations probably represents a typical seasonal fluctuation of the water table. Between August 3 and September 21, water-level elevations increased in Wells MW-1 through MW-4 between 0.18 and 0.34 foot; the water level in MW-5 decreased 0.03 foot. The increases likely were the result of precipitation in mid-September. Between September 21 and October 20, water levels in Wells MW-1 and MW-4 decreased from September levels by 0.05 to 0.72 foot; Well MW-5 increased by 0.01 foot.

Review of water-level elevations measured during the September 1989 sampling indicate that ground water flows onto the site from the east. Ground-water flow diverges in the central area of the site and discharges from the site toward the west and northwest. The ground-water gradient throughout the site on September 21 was 0.013 foot/foot. The discharge flow direction and discharge gradient are generally consistent with those calculated throughout this investigation.

## LABORATORY ANALYSIS AND RESULTS

The second quarterly ground-water samples were analyzed for total petroleum hydrocarbons (TPH) as gasoline, diesel, and kerosene by EPA Test Method 8015/3510; volatile organics by EPA Test Method 8240; organochlorine pesticides and PCBs by EPA Test Method 8080; base/neutral and acid extractable semivolatile organics by EPA Test Method 8270; and the 17 priority pollutant metals. Sample analyses were performed by Curtis & Tompkins, Ltd., Analytical Laboratories of Berkeley, California, a state-certified laboratory for these analyses. Ground-water sample analytical results for all analyses performed during this investigation are presented in Table 2. Copies of the laboratory analytical data sheets and chain of custody forms for second quarter sampling are included as an appendix to this report.

### Results of Analyses for Organic Compounds

No volatile organic compounds (EPA Test Method 8240) were detected in any of the ground-water samples. The following organics were detected at low levels in the sample from Well MW-2, located on the north side of the property:

- TPH as diesel (1 part per million [ppm])
- Semivolatile organic compounds (EPA Test Method 8270)
  - Fluorene (0.0060 ppm)
  - Bis (2 ethylhexyl) phthalate (0.0050 ppm)
  - 2-Methylnaphthalene (0.0061 ppm)
- Organochlorine pesticides and PCBs (EPA Test Method 8080)
  - Heptachlor (0.00016 ppm)
  - 4,4'-DDD (0.00015 ppm)

Except for a trace of fluorene, none of these chemicals were detected in this well in the first quarter sampling round. TPH as gasoline, detected in the sample from this well in the first quarter at 0.30 ppm, was not detected during this sampling round with a detection limit of 0.5 ppm.

Low concentrations of endrin aldehyde and PCB 1260 were detected in the samples from Wells MW-1 and MW-5, located at the center of the eastern and western ends of the property, respectively. During the first sampling, the samples from wells MW-1, MW-3 and MW-5 were not analyzed for organochlorine pesticides. No other organic compounds were detected in any samples in this or the previous quarter.

Mr. Richard K. Robbins  
Page 4

**Results of Analyses for Metals**

Seven priority pollutant metals were detected. Barium and zinc were detected in the samples from all five wells at concentrations ranging from 0.06 to 0.19 ppm for barium and 0.03 to 0.05 ppm for zinc. Barium levels were all slightly higher than those measured in first quarter sampling, and zinc concentrations were all slightly lower.

In addition to barium and zinc, nickel and cadmium were detected in MW-1; molybdenum in MW-2; cadmium in MW-3; copper and nickel in MW-4; and arsenic in MW-5. On the basis of HLA's experience in the Bay Area, these concentrations of these metals likely represent naturally occurring background conditions.

In the field blank sample, no detectable concentrations of any of the analytes were reported.

HLA anticipates conducting the third quarterly sampling in December 1989.

A copy of this report should be sent to the California Regional Water Quality Control Board, San Francisco Bay Region.

If you have any questions, please call.

Yours very truly,

HARDING LAWSON ASSOCIATES

BASE/NEUTRAL COMPOUNDS

	RESULT ug/L	LOD ug/L
Azobenzene	ND	5
4-Bromophenyl-phenylether	ND	5
Hexachlorobenzene	ND	5
Phenanthrene	ND	5
Anthracene	ND	5
Di-n-butylphthalate	ND	5
Fluoranthene	ND	5
Benzidine	ND	5
Pyrene	ND	5
Butylbenzylphthalate	ND	5
3,3'-Dichlorobenzidine	ND	25
Benzo (a) anthracene	ND	5
Chrysene	ND	5
Bis (2-ethylhexyl)phthalate	ND	5
Di-n-octylphthalate	ND	5
Benzo (b) fluoranthene	ND	5
Benzo (k) fluoranthene	ND	5
Benzo (a) pyrene	ND	5
Indeno (1,2,3-cd) pyrene	ND	10
Dibenzo (a,h) anthracene	ND	10
Benzo (g,h,i) perylene	ND	10

HSL COMPOUNDS

Aniline	ND	5
Benzoic Acid	ND	25
2-Methylphenol	ND	5
4-Methylphenol	ND	5
2,4,5-Trichlorophenol	ND	25
Benzyl Alcohol	ND	5
4-Chloroaniline	ND	5
2-Methylnaphthalene	ND	5
2-Nitroaniline	ND	25
3-Nitroaniline	ND	25
Dibenzofuran	ND	5
4-Nitroaniline	ND	25

ND = None Detected, Limit of Detection (LOD) appears in right column

QA/QC SUMMARY:

2-Fluorophenol	21	Nitrobenzene-d5	37
Phenol-d5	22	2-Fluorobiphenyl	56
2,4,6-Tribromophenol	34	Terphenyl-d14	36

LABORATORY NUMBER: 18333  
 CLIENT: HARDING LAWSON ASSOCIATES  
 PROJECT #: 18452 016 02  
 LOCATION: WAREHAM

DATE RECEIVED: 09/22/89  
 DATE ANALYZED: 10/04/89  
 DATE REPORTED: 10/12/89

Extractable Petroleum Hydrocarbons in Aqueous Solutions  
 EPA 8015 (Modified)  
 Extraction Method: EPA 3510

LAB ID	CLIENT ID	GASOLINE (mg/L)	KEROSENE (mg/L)	DIESEL (mg/L)	OTHER (mg/L)
18333-1	89092101 mw-1	ND(0.5)	ND(0.5)	ND(0.5)	ND(0.5)
18333-2	89092102 mw-2	ND(0.5)	ND(0.5)	1.0*	ND(0.5)
18333-3	89092103 mw-5	ND(0.5)	ND(0.5)	ND(0.5)	ND(0.5)
18333-4	89092104 mw-4	ND(0.5)	ND(0.5)	ND(0.5)	ND(0.5)
18333-5	89092105 blank	ND(0.5)	ND(0.5)	ND(0.5)	ND(0.5)
18333-6	89092106 mw-3	ND(0.5)	ND(0.5)	ND(0.5)	ND(0.5)

ND = Not Detected; Limit of detection in parentheses.

\* = Fingerprint pattern does not match Hydrocarbon Standards.  
 Quantitation based on area sum within C12 to C26 boiling range.

QA/QC SUMMARY

RPD, %	5
Spike: % Recovery	93
