RE: UNDERGROUND STORAGE TANK CLOSURE REPORT

RECEIVED

AUG 06 1999

ENV. COMPLIANCE

Dear Ms. Hugo:

On behalf of Tosco Marketing Company, TRC/ Alton Geoscience submits this report of underground storage tank (UST) and product piping removal activities conducted at the former Tosco 76 Service Station 3737, located at 1400 Powell Street, Emeryville, California.

### 1.0 PRODUCT PIPING REMOVAL AND OVEREXCAVATION

On May 7, 1999 under the supervision of TRC/ Alton Geoscience, Norman and Norman completed the removal of product piping associated with the former fuel dispenser islands.

Immediately following the piping removal and under the direction of Robert Weston with Alameda County Health Care Services (ACHCS), soil samples D-1, D-2, PL-1, PL-2, PL-3, and PL-4 were collected at various points along the former product line trench and at the former dispenser islands (Figure 1). These samples were collected at depths ranging from 1.5 to 4.0 feet below grade (fbg).

On May 11, 1999, Norman and Norman under the supervision of TRC/ Alton Geoscience and Robert Weston with ACHCS, overexcavated soil from below the former northwest dispenser and product piping. Approximately six cubic yards of soil was removed, transported, and disposed of at Forward Inc. Landfill in Manteca, California according to Department of Transportation requirements. Soil sample PL-2 at a depth of 4 fbg was collected from below the excavation (Figure 1). Please refer to Appendix A for the waste disposal manifests for the excavated soil.

## **Underground Storage Tank Closure Report**

Former Tosco 76 Service Station 3737

August 2, 1999

---

The soil samples from below the product piping and the composite samples from the excavation were submitted to a state certified lab and analyzed for total petroleum hydrocarbons as gasoline (TPH-G), total petroleum hydrocarbons as diesel (TPH-D), benzene, toluene, ethyl benzene, and total xylenes (BTEX), and methyl tertiary-butyl ether (MTBE) using Environmental Protection Agency (EPA) Method 8015/8020. Analytical results are summarized in Table 1. Laboratory reports and Chain of Custody documentation are included in Appendix B.

Also on May 11, 1999, TRC/ Alton under the direction of ACHCS, collected a groundwater sample from TCW-1 (Figure 1). The groundwater sample was analyzed for TPH-G, BTEX, TPH-D, and MTBE by EPA Method 8015/8020 and MTBE was confirmed by EPA Method 8260. Analytical results are summarized in Table 3. Copies of laboratory results and Chain of Custody documentation are presented in Appendix B.

### **2.0 WASTE OIL UST REMOVAL**

On May 24, 1999, one single-walled 550-gallon steel waste oil UST, located west of the station building was removed under the direction of Susan Hugo with ACHCS and supervision of TRC/ Alton Geoscience (Figure 1). Upon removal of the UST, two small holes on the top tank wall were observed while no holes were seen on either the bottom or sidewalls of the tank. The UST was transported from the site by Erickson Inc. for disposal. A copy of the uniform hazardous waste manifest is provided in Appendix A.

Field hydrocarbon measurements were taken from soil samples collected from the bottom and side walls of the excavation cavity. Soil samples were collected for laboratory analysis based on discoloration of the soil, field hydrocarbon data, and by the direction of the ACHCS inspector present during the excavation.

Soil samples WO-4 through WO-7 and WO-1 were collected from the bottom and sidewalls of the excavation at depths of 7.5 and 10.0 fbg (Figure 2). These soil samples were submitted to a state certified laboratory for analysis. All samples were analyzed for TPH-G, TPH-D, total petroleum hydrocarbons as motor oil (TPH-MO), BTEX, and MTBE using EPA method 8015/8020. Additional analyses were performed for semi-volatile organics using EPA Method 8270 and halogenated organic compounds using EPA Method 8010 for soil samples WO-1 and WO-6. Analytical results are summarized in Table 2. Laboratory reports and Chain of Custody documentation are included in Appendix B.

- \* = "grab" type groundwater sample.

**APPENDIX A**  
**GENERAL FIELD PROCEDURES AND**  
**WASTE MANIFESTS**

## GENERAL FIELD PROCEDURES

### EXCAVATION SOIL SAMPLING

Excavation soil samples are collected either by driving a stainless steel sample tube directly into freshly uncovered soil, or from the backhoe bucket by driving the sample tube into a relatively coherent and undisturbed portion of soil within the bucket. Excavated soil is temporarily stockpiled onsite. Stockpile samples are collected by shoveling below the surface of the pile and inserting a steel sample tube into the soil.

### SOIL SAMPLE HANDLING

Upon retrieval, soil samples are immediately removed from the sampler, sealed with Teflon sheeting and polyurethane caps, and wrapped with tape. Each sample is labeled with sample identification, site identification, sampler's initials, and date of collection. After the samples have been labeled and documented in the chain of custody record, they are placed in a cooler with ice at approximately 4 degrees Celsius prior to and during transport to a state-certified laboratory for analysis. Samples not selected for immediate analysis may be transported in a cooler with ice and archived in a frostless refrigerator at approximately 4 degrees Celsius for possible future testing.

### DECONTAMINATION

Prior to use, the sampler and sampling tubes are brush-scrubbed in a Liqui-nox and potable water solution and rinsed twice in clean potable water. Sampling equipment and tubes are also decontaminated before each sample is collected to avoid cross-contamination between sample locations.

### CHAIN OF CUSTODY PROTOCOL

Chain of custody protocol is followed for all soil samples selected for laboratory analysis. The chain of custody form(s) accompanies the samples from the sampling locality to the laboratory, providing a continuous record of possession prior to analysis.

### % Recovery

Control Limits: 50-150 50-150 50-150 50-150

#### Please Note:

The LCS is a control sample of known, Interferent free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

Ethyl Benzene	0.50	72
Total Xylenes	0.50	24
MTBE	2.5	1,300

Chromatogram Pattern: Gasoline

### Quality Control Data

Report Limit Multiplication Factor:	10
Date Analyzed:	5/11/99
Instrument Identification:	HP-2
Surrogate Recovery, %: (QC Limits = 70-130%)	194

Purgeable Hydrocarbons are quantitated against a fresh gasoline standard.  
 Analytes reported as N.D. were not detected above the stated reporting limit.

## TOTAL EXTRACTABLE PETROLEUM HYDROCARBONS

Analyte	Reporting Limit µg/L	Sample I.D. 905-0421
Extractable Hydrocarbons	50	2600

Chromatogram Pattern: Unidentified Hydrocarbons > C9

### Quality Control Data

Report Limit Multiplication Factor:	1.0
Date Extracted:	5/10/99
Date Analyzed:	5/11/99
Instrument Identification:	HP-3B

Extractable Hydrocarbons are quantitated against a fresh diesel standard.  
Analytes reported as N.D. were not detected above the stated reporting limit.

**Please Note:**

The LCS is a control sample of known, interferent free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
