Re: First Quarter 2009 Semi-Annual Ground-Water Monitoring Report, Atlantic Richfield Company (a BP affiliated company) Station #2169, 889 West Grand Avenue, Oakland, Alameda County, California; ACEH Case #RO000072

Dear Mr. Supple:

Provided herein is the *First Quarter 2009 Semi-Annual Ground-Water Monitoring Report* for Atlantic Richfield Company Station #2169 located at 889 West Grand Avenue, Oakland, Alameda County, California (Site). This report presents results of ground-water monitoring conducted at the Site during First Quarter 2009.

Should you have questions regarding the work performed or results obtained, please do not hesitate to contact us at (530) 566-1400.

Sincerely,

BROADBENT & ASSOCIATES, INC.

STATION #2169 SEMI-ANNUAL GROUND-WATER MONITORING REPORT

| | |
|-------------------------------------|--|
| Facility: #2169 | Address: 889 West Grand Avenue, Oakland |
| Environmental Business Manager: | Mr. Paul Supple |
| Consulting Co./Contact Persons: | Broadbent & Associates, Inc.(BAI)/Rob Miller & Tom Venus (530) 566-1400 |
| Consultant Project No.: | 06-88-621 |
| Primary Agency/Regulatory ID No.: | Alameda County Environmental Health (ACEH) ACEH Case #RO000072 |
| Facility Permits/Permitting Agency: | NA |

WORK PERFORMED THIS QUARTER (First Quarter 2009):

1. Submitted *Fourth Quarter 2008 Status Report*. Work performed by BAI.
2. Conducted ground-water monitoring/sampling for First Quarter 2009. Work performed on 8 January 2009 by Stratus Environmental, Inc (Stratus).

WORK PROPOSED FOR NEXT QUARTER (Second Quarter 2009):

1. Per the ACEH 8 January 2009 letter, prepared and submitted the 6 April 2009 *Preferential Pathway Evaluation and Soil & Ground-Water Investigation Work Plan*.
2. Prepared and submitted First Quarter 2009 Semi-Annual 2008 Ground-Water Monitoring Report (contained herein).
3. Upon ACEH approval, begin implementation of the soil and water investigation.

QUARTERLY RESULTS SUMMARY:

| | |
|---------------------------------------|--|
| Current phase of project: | Ground-water monitoring/sampling |
| Frequency of ground-water monitoring: | Semi-Annually: A-1 through A-6, AR-1, AR-2, ADR-1, ADR-2 |
| Frequency of ground-water sampling: | Semi-Annually (1Q & 3Q): Wells A-1, A-5, A-6, ADR-1 Annually (3Q): Wells A-2, AR-1, AR-2, ADR-2 |
| Is free product (FP) present on-site: | No |
| FP recovered this quarter: | None |
| Cumulative FP recovered: | 4.8 gallons: Wells ADR-1 and ADR-2 |
| Current remediation techniques: | Soil Vapor Extraction System shut down in Dec. 2001 |
| Depth to ground water (below TOC): | 9.29 ft (A-5) to 11.71 ft (A-3) |
| General ground-water flow direction: | North-Northwest |
| Approximate hydraulic gradient: | 0.003 ft/ft |

DISCUSSION:

The semi-annual round of ground-water monitoring and sampling was conducted at Station #2169 on 8 January 2009 by Stratus. Water levels were gauged in each of the ten wells at the Site. No irregularities were noted during water level gauging. Depth to water measurements ranged from 9.29 ft at well A-5 to 11.71 ft at well A-3. Resulting ground-water surface elevations ranged from 7.11 ft above mean sea level in up-gradient well A-4 to 6.28 ft at down-gradient well A-2. Water level elevations were between historic minimum and maximum ranges for each well gauged, as summarized in Table 1. Water level elevations yielded a potentiometric ground-water flow direction and gradient to the north-northwest at approximately 0.003 ft/ft, consistent with historical data (see Table 3). Ground-water monitoring field data sheets are provided within Appendix A. Measured depths to ground water and respective ground-

water elevations are summarized in Table 1. Potentiometric ground-water elevation contours are presented in Drawing 1.

Ground-water samples were collected from wells A-1, A-5, A-6, and ADR-1, consistent with the sampling schedule. No irregularities were reported during sampling. Samples were submitted under chain-of-custody protocol to Calscience Environmental Laboratories, Inc. (Garden Grove, California), for analysis of Gasoline Range Organics (GRO, C6-12) by EPA Method 8015B; for Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX) by EPA Method 8260B; and tert-Amyl methyl ether (TAME), tert-Butyl alcohol (TBA), Di-isopropyl ether(DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Ethanol, Ethyl tert-butyl ether (ETBE), and Methyl tert-butyl ether (MTBE) by EPA Method 8260B. No significant irregularities were encountered during laboratory analysis of the samples. Ground-water sampling field data sheets and the laboratory analytical report, including chain of custody documentation, are provided in Appendix A.

Gasoline range organics (GRO) were detected above the laboratory reporting limits in three of the four wells sampled at concentrations up to 39,000 micrograms per liter ($\mu\text{g}/\text{L}$) in well A-5. Benzene was detected above the laboratory reporting limit in two of the four wells sampled at concentrations of 400 $\mu\text{g}/\text{L}$ in well A-1 and 300 $\mu\text{g}/\text{L}$ in well A-5. Toluene was detected above the laboratory reporting limits in three of the four wells sampled at concentrations up to 130 $\mu\text{g}/\text{L}$ in well A-1. Ethylbenzene was detected above the laboratory reporting limit in two of the four wells sampled at concentrations of 530 $\mu\text{g}/\text{L}$ in well A-1 and 2,400 $\mu\text{g}/\text{L}$ in well A-5. Total Xylenes were detected above the laboratory reporting limit in three of the four wells sampled at concentrations up to 5,400 $\mu\text{g}/\text{L}$ in well A-5. MTBE was detected above the laboratory reporting limit in two of the four wells sampled at concentrations of 1.6 $\mu\text{g}/\text{L}$ in well A-6 and 2.4 $\mu\text{g}/\text{L}$ in well ADR-1. The remaining fuel additives and oxygenates were not detected above their laboratory reporting limits in the four wells sampled this quarter.

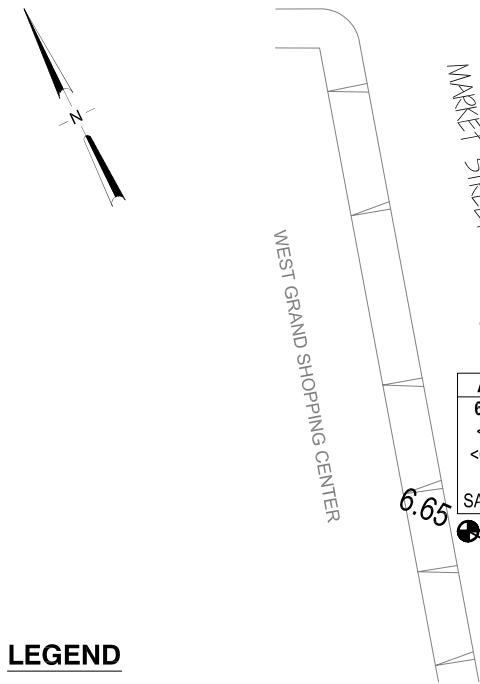

Detected analyte concentrations were within the historic minimum and maximum ranges recorded for each well (dating back to June 2000) with the following exceptions: GRO (14,000 $\mu\text{g}/\text{L}$), toluene (130 $\mu\text{g}/\text{L}$), ethylbenzene (530 $\mu\text{g}/\text{L}$), and total xylenes (790 $\mu\text{g}/\text{L}$) each reached historic maximum concentrations in well A-1; GRO (39,000 $\mu\text{g}/\text{L}$) reached a historic maximum concentration in well A-5; and MTBE (1.6 $\mu\text{g}/\text{L}$) reached a historic minimum concentration in well A-6. Historic laboratory analytical results are summarized in Table 1 and Table 2. A copy of the laboratory analytical report, including chain-of-custody documentation is provided in Appendix A. Ground-water monitoring data (GEO_WELL) and laboratory analytical results (EDF) were uploaded to the GeoTracker AB2886 database. Upload confirmation pages are provided in Appendix B.

CLOSURE:

The findings presented in this report are based upon: observations of Stratus field personnel (see Appendix A), the points investigated, and results of laboratory tests performed by Calscience Environmental Laboratories, Inc. (Garden Grove, California). Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of Atlantic Richfield Company. It is possible that variations in soil or ground-water conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

Table 1. Summary of Ground-Water Monitoring Data: Relative Water Elevations and Laboratory Analyses

Station #2169, 889 W. Grand Ave., Oakland, CA

| Well and Sample Date | P/NP | Comments | TOC (feet msl) | Top of Screen (ft bgs) | Bottom of Screen (ft bgs) | DTW (feet bgs) | Water Level Elevation (feet msl) | Concentrations in (µg/L) | | | | | | DO (mg/L) | pH |
|----------------------|------|----------|----------------|------------------------|---------------------------|----------------|----------------------------------|--------------------------|---------|---------|---------------|---------------|------|-----------|----|
| | | | | | | | | GRO/TPHg | Benzene | Toluene | Ethyl-Benzene | Total Xylenes | MTBE | | |
| AR-2 | | | | | | | | | | | | | | | |

ABBREVIATIONS & SYMBOLS:

-- = Not analyzed/applicable/measured/available
< = Not detected at or above specified laboratory reporting limit
DO = Dissolved oxygen
DTW = Depth to water in ft bgs
ft bgs = Feet below ground surface
ft MSL = Feet above mean sea level
GRO = Gasoline range organics
GWE = Groundwater elevation measured in ft MSL
mg/L = Milligrams per liter
MTBE = Methyl tert-butyl ether analyzed by EPA Method 8021B unless otherwise noted
NP = Well not purged prior to sampling
P = Well purged prior to sampling
TOC = Top of casing measured in ft MSL
TPH-g = Total petroleum hydrocarbons as gasoline
µg/L = Micrograms per liter

FOOTNOTES:

a = Well was covered by stockpiled soil and not accessible.
b = GRO/TPH-g chromatogram pattern: Gasoline C6-C10.
c = Primary and confirmation results for xylene varied by greater than 40% RPD. The values may still be useful for their intended purpose.
d = TPH-g, BTEX, and MTBE analyzed using EPA Method 8260B starting first quarter 2003.
e = Well inaccessible.
f = ORC sock in well.
g = Well removed from annual sampling schedule.
h = ORC sock removed prior to gauging.
i = Site re-survey to NAV'88 datum on January 30, 2004.
j = Sheen in well.
k = Car parked over well AR-2 during monitoring event on 9/2/04. Well was sampled 9/20/04.
m = Hydrocarbon result partly due to individual peak(s) in quant. range.
n = Possible low bias for GRO due to CCV falling outside acceptance criteria.
o = Initial analysis within holding time but failed QA/QC criteria.

NOTES:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Top and bottom of screen depths for wells ADR-1 and ADR-2 are estimated from EMCON sampling sheets.

Values for DO and pH were obtained through field measurements.

GRO analysis was completed by EPA method 8260B (C4-C12) for samples collected from the time period April 2006 through February 4, 2008. The analysis for GRO was changed to EPA method 8015B (C6-C12) for samples collected from the time period February 5, 2008 through the present.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

ABBREVIATIONS & SYMBOLS:

-- = Not analyzed/applicable/measured/available
< = Not detected at or above specified laboratory reporting limit
1,2-DCA = 1,2-Dichloroethane
DIPE = Di-isopropyl ether
EDB = 1,2-Dibromoethane
ETBE = Ethyl tert-butyl ether
MTBE = Methyl tert-butyl ether
TAME = tert-Amyl methyl ether
TBA = tert-Butyl alcohol
g/L = Micrograms per Liter

FOOTNOTES:

a = Calibration verification was within method limits but outside contract limits for ethanol.
b = Initial analysis within holding time but failed QA/QC criteria.
c = Possible high bias due to CCV failing outside acceptance criteria for TBA.
d = CCV recovery above limit; analyte not detected.

NOTES:

All volatile organic compounds analyzed using EPA Method 8260B.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

Re: Groundwater Sampling Data Package, BP Service Station No. 2169, located at
889 West Grand Avenue, Oakland, California.

General Information

Data Submittal Prepared / Reviewed by: Becky Carroll / Jay Johnson

Phone Number: (530) 676-6000

On-Site Supplier Representative: Roberto Heimlich

Sampling Date: January 8, 2009

Arrival: 10:00 *Departure:* 12:15

Weather Conditions: Clear

Unusual Field Conditions: None noted.

Scope of Work Performed: Quarterly monitoring and sampling

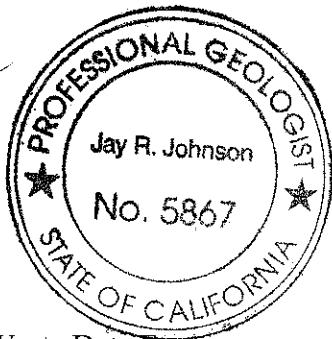

Variations from Work Scope: None noted

This submittal presents the tabulation of data collected in association with routine groundwater monitoring. The attachments include field data sheets, non-hazardous waste data form, chain of custody documentation, certified analytical results, and field procedures for groundwater sampling documentation. The information is being provided to BP-ARCO's Scoping Supplier for use in preparing a report for regulatory submittal. This submittal is limited to presentation of collected data and does not include data interpretation or conclusions or recommendations. Any questions concerning this submittal should be addressed to the Preparer/Reviewer identified above.

Sincerely,

STRATUS ENVIRONMENTAL, INC.

Jay R. Johnson, P.G.
Project Manager

Attachments:

- Field Data Sheets
- Non-Hazardous Waste Data Form
- Chain of Custody Documentation
- Certified Analytical Results
- Field Procedures for Groundwater Sampling

Subject: **Calscience Work Order No.: 09-01-0599**
Client Reference: **BP 2169**

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 1/9/2009 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

A handwritten signature in black ink that appears to read "Richard Villafania".

RPD - Relative Percent Difference , CL - Control Limit

Glossary of Terms and Qualifiers

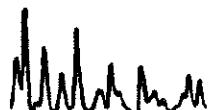

Work Order Number: 09-01-0599

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| AX | Sample too dilute to quantify surrogate. |
| BA | There was no MS/MSD analyzed with this batch due to insufficient sample volume (NR = not reported). See Blank Spike/Blank Spike Duplicate. |
| BA,AY | Relative percent difference out of control, matrix interference suspected. |
| BB | Sample > 4x spike concentration. |
| BF | Reporting limits raised due to high hydrocarbon background. |
| BH | Reporting limits raised due to high level of non-target analytes. |
| BU | Sample analyzed after holding time expired. |
| BV | Sample received after holding time expired. |
| BY | Sample received at improper temperature. |
| CL | Initial analysis within holding time but required dilution. |
| CQ | Analyte concentration greater than 10 times the blank concentration. |
| CU | Surrogate concentration diluted to not detectable during analysis. |
| DF | Reporting limits elevated due to matrix interferences. |
| ET | Sample was extracted past end of recommended max. holding time. |
| EY | Result exceeds normal dynamic range; reported as a min est. |
| GS | Internal standard recovery is outside method recovery limit. |
| IB | CCV recovery above limit; analyte not detected. |
| IH | Calibrn. verif. recov. below method CL for this analyte. |
| IJ | Calibrn. verif. recov. above method CL for this analyte. |
| J,DX | J=EPA Flag -Estimated value; DX= Value < lowest standard (MQL), but > than MDL. |
| LA | Confirmatory analysis was past holding time. |
| LG | Surrogate recovery below the acceptance limit. |
| LH | Surrogate recovery above the acceptance limit. |
| LM,AY | MS and/or MSD above acceptance limits. See Blank Spike (LCS). Matrix interference suspected. |
| LN,AY | MS and/or MSD below acceptance limits. See Blank Spike (LCS). Matrix interference suspected. |
| LQ | LCS recovery above method control limits. |
| LR | LCS recovery below method control limits. |

Work Order Number: 09-01-0599

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| MB | Analyte present in the method blank. |
| MG | Analyte is a suspected lab contaminant. |
| PC | Sample taken from VOA vial with air bubble > 6mm diameter. |
| PI | Primary and confirm results varied by > than 40% RPD. |
| RB | RPD exceeded method control limit; % recoveries within limits. |

FIELD PROCEDURES FOR GROUNDWATER SAMPLING

The sampling procedures for groundwater monitoring events are contained in this appendix.

Equipment Calibration

Standard groundwater sampling equipment – pH/Conductivity/Temperature meter, and dissolved oxygen (DO) meters are calibrated prior to all field work. All calibration is conducted in accordance with equipment manufacturer's recommended procedure and buffer solutions. MSDS for all buffer solutions are maintained in Stratus vehicles. Calibration is completed everyday prior to field work and also once a week. The pH probe is calibrated for a pH of 7.0 daily and for 4.0, 7.0 and 10.0 weekly. The conductivity probe is calibrated for 1413 μs daily and 1413 μs and 447 μs weekly. The temperature probe is calibrated weekly with a NIST-traceable thermometer. The DO probe is calibrated for 100% oxygen daily and 0% and 100% oxygen weekly. All calibration logs are maintained in the Stratus office.

Groundwater and Liquid-Phase Petroleum Hydrocarbon Depth Assessment

Prior to measuring the depth to liquid in the well, the well caps are removed and the liquid level allowed to stabilize. A water/hydrocarbon interface probe is used to assess the liquid-phase petroleum hydrocarbon (LPH) thickness, if present, and a water level indicator is used to measure the groundwater depth in monitoring wells that do not contain LPH. Depth to groundwater or LPH is measured from a datum point at the top of each monitoring well casing. The datum point is typically a notch cut in the north side of the casing edge. If a water level indicator is used, the tip is subjectively analyzed for hydrocarbon sheen.

Subjective Analysis of Groundwater

Prior to purging, a water sample is collected from the monitoring well for subjective assessment. The sample is retrieved by gently lowering a clean, disposable bailer to approximately one-half the bailer length past the air/liquid interface. The bailer is then retrieved, and the sample contained within the bailer is examined for floating LPH and the appearance of a LPH sheen.

Monitoring Well Sampling

In many cases, determining whether to purge or not to purge wells prior to sample collection is made in the field and is often based on depth to water relative to the screen interval of the well. Site-specific field data sheets present details associated with the purge method and equipment used.

Monitoring wells, when purged, use a pump or bailer until pH, temperature, and conductivity of the purge water has stabilized and a minimum of three well volumes of water has been removed. Field measuring equipment is calibrated and maintained according to the manufacturer's instructions. If three well volumes cannot be removed in one half hour's time the well is allowed to recharge to 80% of original level. After recharging, a groundwater sample is then collected from each of the wells using disposable bailers.

A Teflon bailer, electric submersible or bladder pump will be the only equipment used for well sampling. When samples for volatile organic analysis are being collected, the pump flow will be regulated at approximately 100 milliliters per minute to minimize pump effluent turbulence and aeration. Glass bottles of at least 40-milliliters volume and fitted with Teflon-lined septa will be used in sampling for volatile organics. These bottles will be filled completely to prevent air accumulation in the bottle. A positive meniscus forms when the bottle is completely full. A convex Teflon septum will be placed over the positive meniscus to eliminate air. After the bottle is capped, it is inverted and tapped to verify that it contains no air bubbles. The sample containers for other parameters will be filled, filtered as required, and capped. Glass and plastic bottles used by Stratus to collect groundwater samples are supplied by the laboratory.

Groundwater Sample Labeling and Preservation

Samples are collected in appropriate containers supplied by the laboratory. All required chemical preservation is added to the bottles prior to delivery to Stratus. Sample label information includes a unique sample identification number, job identification number, date, and time. After labeling, all groundwater samples are placed in a Ziploc® type bag and placed in an ice chest cooled to approximately 4° Celsius. Upon arriving at Stratus' office the samples are transferred to a locked refrigerator cooled to approximately 4° Celsius. Chemical preservation is controlled by the required analysis and is noted on the chain-of-custody form. Trip and temperature blanks supplied by the laboratory accompany the groundwater sample containers and groundwater samples.

Sample Identification and Chain-of-Custody Procedures

Sample identification and chain-of-custody procedures document sample possession from the time of collection to ultimate disposal. Each sample container submitted for analysis has a label affixed to identify the job number, sampler, date and time of sample collection, and a sample number unique to that sample. This information, in addition to a description of the sample, field measurements made, sampling methodology, names of on-site personnel, and any other pertinent field observations, is recorded in the field records. The samples are analyzed by a California-certified laboratory.

A chain-of-custody form is used to record possession of the sample from time of collection to its arrival at the laboratory. When the samples are shipped, the person in custody of them relinquishes the samples by signing the chain-of-custody form and noting the time. The sample-control officer at the laboratory verifies sample integrity and confirms that the samples are collected in the proper containers, preserved correctly, and

contain adequate volumes for analysis. These conditions are noted on a Laboratory Sample Receipt Checklist that becomes part of the laboratory report upon request.

If these conditions are met, each sample is assigned a unique log number for identification throughout analysis and reporting. The log number is recorded on the chain-of-custody form and in the legally-required log book maintained by the laboratory. The sample description, date received, client's name, and other relevant information is also recorded.

Equipment Cleaning

All reusable sampling equipments are cleaned using phosphate-free detergents and rinsed with de-ionized water.
