Re: Greyhound Terminal
Location 8934
Oakland, California

Dear Ms. Hugo:

On behalf of Greyhound Lines, Inc., Engineering-Science, Inc. (ES) is pleased to submit the March 1993, monthly monitoring report for the Greyhound Terminal in Oakland. Attached you will find Table 1 which lists the measured water levels and free-product thicknesses from on-site wells monitored during our site visit. Figure 1 shows the locations of the monitoring wells.

During our site visit on March 5, free phase hydrocarbons were observed in BC-1, ES-2 and ES-5. A hydrocarbon sheen was present in recovery well ES-1. The hydrocarbon recovery system in operation at this facility continues to work effectively reducing product thicknesses in recovery wells ES-1, ES-2, ES-5 and BC-1. A total of 505 gallons of diesel fuel and contaminated groundwater have been recovered to date.

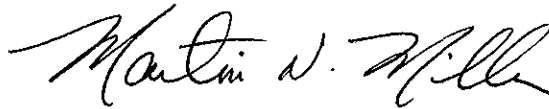

Our next site visit is scheduled during the week of April 5. At that time we will be collecting groundwater samples as part of Greyhound's quarterly sampling and analysis program. Analytical results will be submitted to your office in the format of a quarterly report in accordance with all quarterly reporting requirements.

Greyhound is currently preparing a supplemental site assessment work plan to determine the full extent of soil and groundwater contamination at and near the facility. This plan will be submitted to the Alameda County Department of Environmental Health (ACDEH) for approval prior to conducting any additional assessment activities. Greyhound still awaits ACDEH approval and/or comments to the closure documentation submitted in December 1992 and the current remediation program in progress at this facility.
