DISCUSSION:

No environmental field activities were conducted by Broadbent at the Site during the Second Quarter of 2012. The most recent groundwater monitoring and sampling event occurred during the First Quarter of 2012, the results of which are contained within the Q1 GWM Report. A site location map is presented as Drawing 1 and a groundwater elevation and analytical summary map from the most recent first quarter 2012 monitoring and sampling event is presented as Drawing 2.

On July 27, 2011, ARC submitted a *Case Evaluation & Justification For No Further Action* report (Closure Report) prepared by Closure Solutions. This Closure Report presented results that indicated the site appeared to meet low-risk closure criteria due to soil and groundwater investigations that had adequately defined residual and dissolved-phase contaminant, and further investigation and active remediation did not appear to be warranted or necessary to protect human health and ecological receptors. Therefore, ARC recommended No Further Action status for the Site. To date, there has been no response from ACEH.

LIMITATIONS:

The findings presented in this report are based upon observations of field personnel, points investigated, results of laboratory tests performed by Calscience Environmental Laboratories, Inc. (Garden Grove, California), and our understanding of ACEH requirements. Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of the Atlantic Richfield Company. It is possible that variations in soil or groundwater conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.
