Subject: RO 79; Oakland National Engravers; Surplus GeoTracker Cases

Hi Cherie,
Hope all is well.

We've had a chance to review three surplus cases on GeoTracker associated with this case (RB Case # 01-1791). In total there are (were) four cases on GeoTracker associated with this site location. Two were UST and two are SLIC. We have retained RO79 (an active UST case), but have deleted the second UST case after transferring information to RO79 (see details below).

The two SLIC cases are under SF RWQCB oversight; however, the COCs appear to be captured in ongoing investigations conducted under RO79. We believe it would be appropriate for the RWQCB to delete these cases as surplus.

Associated Notes:

- Oakland National Engravers; Global ID # T0600101659; LOP Case # RO0000079; RB Case # 01-1791; This case is retained; COC are mineral spirits, chlorinated solvents, and now - gasoline.
- Boysen Paint; Global ID #T0600100481; LOP Case; Local and RB Case # 01-0527; Gasoline tank; structural failure; closed tank; Case deleted as surplus; March 12, 2010 after verifying data was transferred to RO 79 (currently no known gasoline UST at RO 79 facility)
- Oakland National Engravers; Global ID # T0600191501; SLIC; RB Case # 01S0137; Recommended for deletion; COC is diesel; similar hydrocarbon range contaminant to known mineral spirits COC associated with RO 79
- Oakland National Engravers; Global ID # T0600191527; SLIC: RB Case # 01S0332; Recommended for deletion; COC are chlorinated hydrocarbons; contaminant already captured in RO 79 investigations

If you have questions, please let me know.
Thanks,

Mark Detterman
