1.0 INTRODUCTION

This report presents the methods and findings of Aqua Science Engineers, Inc. (ASE's) quarterly groundwater monitoring at the Kozel Property located at 1001 42nd Street in Oakland, California (Figures 1 and 2). Part of the site is also located in Emeryville, California as the city limit runs through the subject property.

2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On June 27, 2005, ASE measured the depth to water in monitoring wells MW-B2, MW-B3, MW-B4 and BES-1 using an electric water level sounder. Monitoring well MW-B1 had been recently covered with a new concrete sidewalk installed by the developer of the property to the south as a part of that site's development as a residential community. The surface of the groundwater was also checked for the presence of free-floating hydrocarbons or sheen using an interface probe and product thickness bailer. Monitoring well BES-1 contained 0.02 feet of free-floating hydrocarbons. Groundwater elevation data is presented in Table One. Recent monitoring events have been scheduled to coincide with sampling conducted by Clayton Environmental at the adjacent Former Dunne Paints site; however, Clayton has recommended case closure for the site and therefore has discontinued groundwater monitoring. Historical elevation data from Clayton Environmental for Former Dunne Paints is also included in the Table One.

A groundwater elevation (potentiometric surface) contour map is presented as Figure 2. The groundwater flow direction at the site is generally to the south with an approximate gradient of 0.012 feet/foot.

3.0 MONITORING WELL SAMPLING

On June 27, 2005, ASE collected groundwater samples from monitoring wells MW-B2, MW-B3, and MW-B4 for analysis. Monitoring well MW-B1 was not sampled because it was beneath new concrete, and BES-1 was not sampled due to the presence of free-floating hydrocarbons.

Prior to sampling, the wells were purged of three well casing volumes of groundwater using disposable polyethylene bailers. The pH, temperature, and conductivity of the purge water were monitored during evacuation, and samples were not collected until these parameters stabilized. Samples were collected from each well using the same bailers. The

groundwater samples to be analyzed for volatile compounds were decanted from the bottom of the bailers using low flow emptying devices into 40-ml volatile organic analysis (VOA) vials, preserved with hydrochloric acid, and sealed without headspace. The remaining samples were decanted into 1-liter amber glass bottles. All of the samples were labeled and stored on ice for transport to Severn Trent Laboratories (STL San Francisco) of Pleasanton, California (CA DHS ELAP# 2496) under appropriate chain of custody documentation.

Well sampling purge water was contained in a sealed and labeled 55-gallon steel drum for temporary storage until off-site disposal can be arranged. See Appendix A for copies of the well sampling field logs.

4.0 ANALYTICAL RESULTS FOR GROUNDWATER

All groundwater samples were analyzed by STL San Francisco for total petroleum hydrocarbons as mineral spirits (TPH-MS) by modified EPA Method 8015M with silica gel cleanup, and volatile organic compounds (VOCs) by EPA Method 8260B. The analytical results are tabulated in Table Two, and a copy of the certified analytical report and chain of custody form are included in Appendix B.

4.1 Mineral Spirit Results

- The groundwater sample collected from monitoring well MW-B2 contained 4,300 parts per billion (ppb) TPH-MS. The groundwater sample collected from monitoring well MW-B4 contained 2,800 ppb TPH-MS. No TPH-MS was detected in the groundwater sample collected from MW-B3.

4.2 VOC Results

- The groundwater sample collected from monitoring well MW-B2 contained 5.9 ppb tert-butylbenzene, 4.7 ppb sec-butylbenzene, and 2.2 ppb vinyl chloride. No other VOCs were detected in the groundwater sample from monitoring well MW-B2.
- The groundwater sample collected from monitoring well MW-B3 contained 0.50 ppb 1,1,1-TCA and 3.4 ppb TCE. This is the first quarter that these compounds have been detected in MW-B3. No other VOCs were detected in the groundwater sample from monitoring well MW-B3

- The groundwater sample collected from monitoring well MW-B4 contained 7.1 ppb tert-butylbenzene, 3.0 ppb sec-butylbenzene, and 1.9 ppb vinyl chloride. No other VOCs were detected in the groundwater sample from monitoring well MW-B4.

5.0 CONCLUSIONS

Monitoring BES-1 contained a measurable thickness of free-floating hydrocarbons this quarter, which is consistent with previous quarters. The free-floating hydrocarbons were bailed from the well and contained in a drum on-site. The TPH-MS concentration in MW-B2 decreased one order of magnitude; the TPH-MS concentration in MW-B4 was very similar to last quarter. All of the detected VOC compounds in MW-B2 and MW-B4 were very similar to last quarter's results. The detections of 1,1,1-TCA and TCE in MW-B3 are the first ever for this well. None of the hydrocarbon or VOC concentrations in any of the groundwater samples analyzed exceeded California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) environmental screening levels (ESLs) for sites where groundwater is not a current or potential source of drinking water.

6.0 RECOMMENDATIONS

ASE recommends continued quarterly groundwater monitoring at the site. The next groundwater monitoring event is scheduled for September 2005. Additionally, ASE will be performing the additional soil and groundwater assessment described in ASE's workplan dated April 26, 2005 during the next quarter.

7.0 REPORT LIMITATIONS

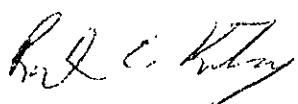

The results presented in this report represent conditions at the time of the groundwater sampling, at the specific locations where the samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination resulting from unknown sources, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of an independent CAL-DHS certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

Aqua Science Engineers appreciates the opportunity to assist the Edward R. and Elizabeth A. Kozel Charitable Remainder Trust with its environmental needs. Should you have any questions or comments, please feel free to call us at (925) 820-9391.

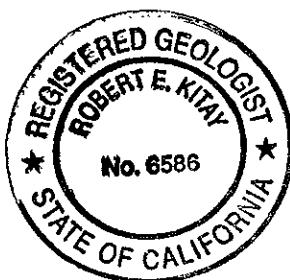

Respectfully submitted,
AQUA SCIENCE ENGINEERS, INC.

David Allen, R.E.A.
Senior Project Manager

Robert E. Kitay, R.G., R.E.A.
Senior Geologist

Notes:

Most recent concentrations are in **Bold**.

Non-detectable concentrations noted by the less than sign (<) followed by the laboratory reporting limit or "ND".

NA indicates the data is not available.

"* indicates not tested

* = TPH+d, * = TEPH (non-diesel), * = TPH+g, * = TPPH (non-gasoline), * = Kerosene

* indicates a grab sample.

ESL = Environmental screening levels presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater (July 2003)" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region

NE Indicates an ESL has not been established

Dear Mr. Allen,

Attached is our report for your samples received on 06/27/2005 16:15

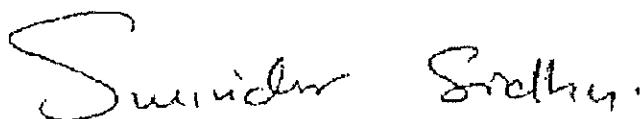

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 08/11/2005 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu
Project Manager
