Duration: 10 minutes

After playing phone tag for a bit, connect with Robert Cheung of AMEC / Geomatrix regarding recent exchange of letters. In regards to the technical responses in their Jan 10, 2011 letter, the vapor wells VP1 to VP3 are intended to be installed in addition to use of existing points (non-vapor use previously). In regards to relocating or replacing MW-B1, both agree most likely is replacement. Both also agree to get apples to apples comparison to existing well screens, replacement well screen should be 20 ft; ACEH also believes it warranted to get shorter wells sections due to discussions / disagreements as to the specific depth the hydrocarbons are flowing along. Broach possibility of a 20 ft screen as well as a CMT type well, which could be installed at same time, no logging, same mob, to get this info and address the concern; this would help future discussions or SCM generation.
