Subject: RE: Your reference to EPA sampling frequency recommendation (Fuel Leak Case No. RO0000082)

I heard it at an ITRC webinar on vapor intrusion. But the DTSC 2011 Vapor Intrusion Guidance document Page G-2 also states that "A sufficient number of subslab sampling events should be conducted to account for seasonal and spatial variability. At a minimum, two subslab sampling events are warranted before a final risk determination is made."

Subject: Your reference to EPA sampling frequency recommendation (Fuel Leak Case No. RO0000082)

Barbara:

I received and have read through your letter today. Thank you for rapidly getting your response to us.

In Technical Comment 2 you reference "the current EPA recommendation to gather multiple lines of evidence includes vapor sampling at various times throughout the year." Can you direct me to the specific EPA document that contains this recommendation? I am curious about this, myself, and Mr. Schrag has requested that I provide him with that documentation also.

Thanks for your help.

Bob
