Agency Review

Mr. Amir Gholami
Alameda County Health Care Services Agency (ACHCSA)
1131 Harbor Bay Parkway, Suite 250
Alameda, CA 94502

Mr. Chuck Headlee
California Regional Water Quality Control Board (RWQCB)
San Francisco Bay Region
1515 Clay Street, Suite 1400
Oakland, CA 94612

The following is a report detailing the methods and findings of the June 2003 quarterly groundwater sampling at the above-referenced site. This sampling was conducted as required by the ACHCSA and RWQCB. ASE has prepared this report on behalf of Mr. Nissan Saidian, owner of the property.

2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On June 6, 2003, ASE measured the depth to water in each site groundwater monitoring well using an electric water level sounder. The surface of the groundwater was also checked for the presence of free-floating hydrocarbons or sheen using an electronic oil/water interface probe. The presence of free-floating hydrocarbons was confirmed with a disposable bailer half-filled for direct observation. Monitoring well MW-1 contained approximately 4.63-feet of free-floating diesel this quarter. ASE has been performing periodic free-product removal again this quarter. No free-floating hydrocarbons or sheen was observed in any of the remaining site monitoring wells. Groundwater elevation data is presented as Table One.

A groundwater potentiometric surface map for June 5, 2003 is presented as Figure 2. Groundwater beneath the site flows to the west and northwest with a gradient of approximately 0.0051 feet/foot. The groundwater flow direction at the site has been very inconsistent and highly variable.

3.0 GROUNDWATER SAMPLE COLLECTION AND ANALYSIS

Prior to sampling, monitoring wells MW-2 through MW-9 were purged of three well casing volumes of groundwater using dedicated polyethylene bailers. The parameters pH, temperature, and conductivity were monitored during the well purging. Samples were not collected until these parameters stabilized. Groundwater samples were collected from each well using dedicated polyethylene bailers. Since free-floating hydrocarbons were present in monitoring well MW-1, this well was not sampled.

All samples were decanted from the bailers into 40-ml volatile organic analysis (VOA) vials, pre-preserved with hydrochloric acid, and sealed without headspace. The samples were then labeled and placed in coolers with wet ice for transport to Kiff Analytical, LLC of Davis, California under appropriate chain-of-custody documentation. Well sampling field logs are presented in Appendix A.

The well purge water was placed in 55-gallon steel drums and labeled for temporary storage.

The groundwater samples were analyzed for total petroleum hydrocarbons as diesel (TPH-D) by EPA Method 3550/8015M, and total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethylbenzene, and

total xylenes (collectively known as BTEX), and oxygenates by EPA Method 8260B. The analytical results are presented in Table Two. The certified analytical report and chain-of-custody documentation are included as Appendix B.

4.0 CONCLUSIONS

Monitoring well MW-1 contained approximately 4.63-feet of free-floating diesel hydrocarbons. ASE will once again perform product removal from this well as needed.

The benzene and MTBE concentrations detected in groundwater samples collected from monitoring wells MW-3 and MW-6 exceeded the Risk Based Screening Levels (RBSLs) for sites where groundwater is not a current or potential source of drinking water as presented in the "Application of Risk-Based Screening Levels and Decision Making to Sites with Impacted Soil and Groundwater" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region, dated December 2001. Additionally, the total xylenes concentration in the sample collected from MW-3 also exceeded its RBSL. With the exceptions of monitoring wells MW-8 and MW-9, hydrocarbon concentrations generally increased this quarter.

5.0 RECOMMENDATIONS

ASE recommends that this site remain on a quarterly sampling schedule. The next sampling is scheduled for September 2003. ASE will continue periodic free-product removal from monitoring well MW-1 during the next quarter. In addition, ASE anticipates conducting a pilot study for ozone sparging remediation at the site once an approval letter is received from the ACHCSA.

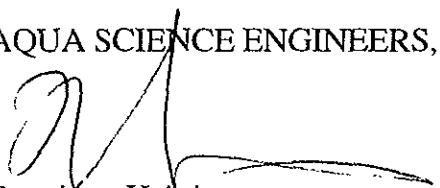

6.0 REPORT LIMITATIONS

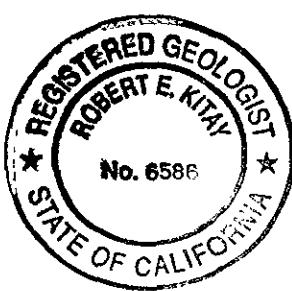

The results presented in this report represent conditions at the time of the groundwater sampling, at the specific locations where the groundwater samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination resulting from sources other than the former underground storage tanks and associated plumbing at the site, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of independent CAL-DHS certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

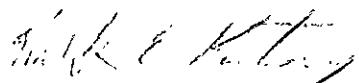

Aqua Science Engineers appreciates the opportunity to provide environmental consulting services for this project, and trust that this report meets your needs. Please feel free to call us at (925) 820-9391 if you have any questions or comments.

Respectfully submitted,

AQUA SCIENCE ENGINEERS, INC.

Damian Hriciga
Project Geologist

Robert E. Kitay, R.G., R.E.A.
Senior Geologist

Notes:

* = Groundwater elevation adjusted for the presence of free-floating hydrocarbons by the equation: Adjusted groundwater elevation = Top of casing elevation - depth to groundwater + (0.8 x free-floating hydrocarbon thickness)

Mid Coast Engineers (MCE) surveyed all site monitoring wells on July 11, 2002 to mean sea level (MSL). The updated elevation data is reflected in the table above.

Notes

Non-detectable concentrations are noted by the less than symbol (<) followed by the detection limit.

Most recent concentrations are in bold.

DHS MCL is the California Department of Health Services maximum contaminant level for drinking water.

RBSL is the RWQCB Risk-Based Screening Level where groundwater is not a potential source of drinking water

NE = MCL/RBSL not established

NA = Sample not analyzed for this compound.

* = Non-typical diesel pattern, hydrocarbons in early diesel range

** = Estimated concentration due to overlapping fuel patterns in the sample

*** = Non-typical gasoline pattern

**** = Non-typical diesel pattern.

= MTBE concentration by EPA Method 8260

Certified Analytical Report
and
Chain of Custody Documentation

Report Number : 33558

Date : 6/17/2003

Damian Hriciga
Aqua Science Engineers, Inc.
208 W. El Pintado Road
Danville, CA 94526

Subject : 8 Water Samples
Project Name : OAKLAND TRUCK STOP
Project Number :

Dear Mr. Hriciga,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeff Dahl".

Jeff Dahl

Approved By: Jeff Dahl

Report Number : 33558

Date : 6/17/2003

QC Report : Laboratory Control Sample (LCS)

Project Name : OAKLAND TRUCK STOP

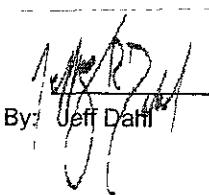

Project Number :

Parameter	Spike Level	Units	Analysis Method	Date Analyzed	LCS Percent Recov.	LCS Percent Recov. Limit
Benzene	40.0	ug/L	EPA 8260B	6/10/03	101	70-130
Toluene	40.0	ug/L	EPA 8260B	6/10/03	99.8	70-130
Tert-Butanol	200	ug/L	EPA 8260B	6/10/03	99.9	70-130
Methyl-t-Butyl Ether	40.0	ug/L	EPA 8260B	6/10/03	99.4	70-130
Benzene	40.0	ug/L	EPA 8260B	6/9/03	100	70-130
Toluene	40.0	ug/L	EPA 8260B	6/9/03	95.8	70-130
Tert-Butanol	200	ug/L	EPA 8260B	6/9/03	101	70-130
Methyl-t-Butyl Ether	40.0	ug/L	EPA 8260B	6/9/03	99.4	70-130
Benzene	40.0	ug/L	EPA 8260B	6/9/03	93.0	70-130
Toluene	40.0	ug/L	EPA 8260B	6/9/03	107	70-130
Tert-Butanol	200	ug/L	EPA 8260B	6/9/03	99.7	70-130
