Alameda, CA 94502

Mr. Chuck Headlee
California Regional Water Quality Control Board (RWQCB)
San Francisco Bay Region
1515 Clay Street, Suite 1400
Oakland, CA 94612

The following is a report detailing the methods and findings of the June 7, 2007 quarterly groundwater sampling at the above-referenced site. This sampling was conducted as required by the ACHCSA and RWQCB. ASE has prepared this report on behalf of Mr. Nissan Saidian, owner of the property.

2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On June 7, 2007, ASE measured the depth to water in monitoring wells MW-1 through MW-10 using an electric water level sounder. The surface of the groundwater was also checked for the presence of free-phase hydrocarbons or sheen. Monitoring well MW-1 contained approximately 4.63-feet of free-phase hydrocarbons, a significant increase from last quarter's measurement. This product was subsequently bailed from the well until only a sheen was visible. Approximately one gallon of product, along with several gallons of water, were removed from the well and stored temporarily on-site in a 55-gallon, labeled drum. Groundwater elevation data is presented as Table One.

A groundwater potentiometric surface map for the May 20, 2007 sampling event is presented as Figure 2. The groundwater flow direction at the site has been inconsistent and highly variable. Groundwater flow beneath the site this quarter includes flow components to the north, west and southeast.

3.0 GROUNDWATER SAMPLE COLLECTION AND ANALYSIS

Groundwater samples were collected from monitoring wells MW-2 through MW-10. Monitoring well MW-1 contained free-phase hydrocarbons and was not sampled. Prior to sampling, the wells were purged of three well casing volumes of groundwater using disposable polyethylene bailers. The parameters pH, temperature, and conductivity were monitored during the well purging, and samples were not collected until these parameters stabilized. Groundwater samples were then collected from each well using the same polyethylene bailers.

All samples were decanted from the bottom of the bailers using low-flow sampling devices into 40-ml volatile organic analysis (VOA) vials, pre-preserved with hydrochloric acid, and sealed without headspace. The samples were then labeled and placed in coolers with wet ice for transport to Kiff Analytical, LLC of Davis, California (CA DHS ELAP #2236) under appropriate chain-of-custody documentation. Well sampling field logs are presented in Appendix A.

The monitoring well purge water was placed in a 55-gallon steel drum, and stored for later removal.

The groundwater samples were analyzed for total petroleum hydrocarbons as diesel (TPH-D) and motor oil (TPH-MO) by modified EPA Method 8015, and total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethylbenzene, and total xylenes (collectively known as BTEX), and oxygenates including ethanol and methanol by EPA Method 8260B. The analytical results are presented in Table Two. The certified analytical report and chain-of-custody documentation are included as Appendix B.

Aqua Science Engineers, Inc. 55 Oak Court, Suite 220, Danville, CA 94526

4.0 CONCLUSIONS

- Monitoring well MW-1 contained approximately 4.63-feet of free-phase hydrocarbons this quarter.
- Analytical results for groundwater samples collected from monitoring well MW-2 were very similar to last quarter's results, with an increase in TPH-G and MTBE from the previous quarter.
- Concentrations of TPH-D, BTEX, MTBE, and TAME increased slightly from the previous quarter in groundwater samples collected from monitoring well MW-3.
- Analytical results for groundwater samples collected from monitoring well MW-4 are very similar to previous results, with a slight decrease in TPH-D, MTBE and TBA from the previous quarter.
- Concentrations of TPH-D, DIPE and TBA increased slightly from the previous quarter in groundwater samples collected from monitoring well MW-5, while MTBE decreased slightly in the same sample.
- Concentrations of TPH-G, benzene, toluene and xylenes increased slightly from the previous quarter in groundwater samples collected from monitoring well MW-6, while TPH-D, MTBE, TBA decreased in the same sample.
- Analytical results for groundwater samples collected from monitoring wells MW-7 and MW-8 are very similar to previous results.
- MTBE concentrations increased very slightly from the previous quarter in groundwater samples collected from monitoring well MW-9, while TBA decreased significantly in the same sample.
- Hydrocarbon concentrations detected in groundwater samples collected from monitoring well MW-10 were very similar to previous results.

Groundwater samples collected from the following monitoring wells contained concentrations of the listed compounds equal to or greater than Environmental Screening Levels (ESLs)¹:

- MW-2—TPH-G
- MW-3—TPH-G, TPH-D, benzene and MTBE
- MW-4—TPH-D
- MW-5—TPH-D
- MW-6—TPH-G, TPH-D and benzene

¹ as presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region dated February 2005

Aqua Science Engineers, Inc. 55 Oak Court, Suite 220, Danville, CA 94526

5.0 RECOMMENDATIONS

ASE recommends that this site remain on a quarterly sampling schedule. The next sampling is scheduled for August 2007. Free-phase hydrocarbon removal from monitoring well MW-1 will continue during the next quarter.

6.0 REPORT LIMITATIONS

The results presented in this report represent conditions at the time of the groundwater sampling, at the specific locations where the groundwater samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination resulting from sources other than the former underground storage tanks and associated plumbing at the site, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of independent CAL-DHS certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

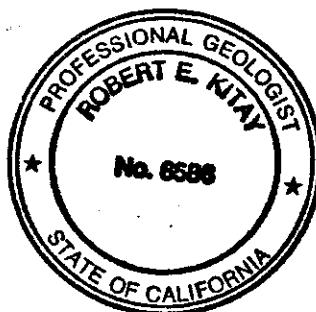

Aqua Science Engineers appreciates the opportunity to provide environmental consulting services for this project, and trust that this report meets your needs. Please feel free to call us at (925) 820-9391 if you have any questions or comments.

Respectfully submitted,

AQUA SCIENCE ENGINEERS, INC.

Michael Rauser
Project Geologist

Robert E. Kitay, P.G., R.E.A.
Senior Geologist

TABLE ONE
Groundwater Elevation Data
Oakland Truck Stop
8255 San Leandro Street, Oakland, CA

| Well I.D & Date Sampled | Top of Casing Elevation (msl) | Depth to Water (feet) | Free-Floating Hydrocarbon Thickness (feet) | Groundwater Elevation (msl) |
|-------------------------------|-------------------------------------|-----------------------------|---|-----------------------------------|
| MW-10 | | | | |
| 10/12/06 | 11.56 | 6.02 | -- | 5.54 |
| 11/9/06 | | 6.24 | -- | 5.32 |
| 3/20/07 | | 5.21 | -- | 6.35 |
| 5/17/07 | | 6.21 | -- | 5.35 |

Notes:

Mid Coast Engineers (MCE) surveyed all site monitoring wells on July 11, 2002 to mean sea level (MSL). The updated elevation data is reflected in the table above.

* = Groundwater elevation adjusted for the presence of free-floating hydrocarbons by the equation: Adjusted groundwater elevation = Top of casing elevation - depth to groundwater + (0.8 x free-floating hydrocarbon thickness)

** = Top of casing elevation has changed and well has not been resurveyed.

*** = Product was bailed by OTS staff prior to measurement by ASE.

NM = Not Measured

Notes:
Non-detectable concentrations are noted by the less than symbol (<) followed by the detection limit. * = Non-typical diesel pattern, hydrocarbons in early diesel range.
Most recent concentrations are in bold.
DHS MCL is the California Department of Health Services maximum contaminant level for drinking water *** = Non-typical gasoline pattern.
ESL = Environmental screening levels presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater (February 2005)" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region.
NE = MCL/ESL not established.
NA = Sample not analyzed for this compound.

**** = Non-typical diesel pattern.

= MTBE concentration by EPA Method 8260

APPENDIX B

Certified Analytical Report
and
Chain of Custody Documentation

Report Number : 56595

Date : 05/29/2007

Mike Rauser
Aqua Science Engineers, Inc.
208 West El Pintado Rd.
Danville, CA 94526

Subject : 8 Water Samples
Project Name : Oakland Truck Stop
Project Number : 3540

Dear Mr. Rauser,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Joel Kiff".

Joel Kiff

Report Number : 56595

Date : 05/29/2007

Subject : 8 Water Samples
Project Name : Oakland Truck Stop
Project Number : 3540

Case Narrative

Hydrocarbons reported as TPH as Diesel do not exhibit a typical Diesel chromatographic pattern for sample MW-2. Some of these hydrocarbons are lower boiling than typical diesel fuel and some of these hydrocarbons are higher boiling than typical diesel fuel.

Hydrocarbons reported as TPH as Diesel do not exhibit a typical Diesel chromatographic pattern for sample MW-4. These hydrocarbons are higher boiling than typical diesel fuel.

The Method Reporting Limit for Methanol has been increased due to the presence of an interfering compound for samples MW-2, MW-3 and MW-6.

Matrix Spike/Matrix Spike Duplicate Results associated with sample MW-7 for the analyte Benzene were affected by the analyte concentrations already present in the un-spiked sample.

Subject : 1 Water Sample
Project Name : Oakland Truck Stop
Project Number : 3540

Dear Mr. Rauser,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Joel Kiff".
Joel Kiff

Subject : 1 Water Sample
Project Name : Oakland Truck Stop
Project Number : 3540

Case Narrative

Hydrocarbons reported as TPH as Diesel do not exhibit a typical Diesel chromatographic pattern for sample MW-8. Some of these hydrocarbons represent diesel fuel and some of these hydrocarbons are higher boiling than typical diesel fuel.
