Soils

\* water and vapor samples are reported in ug/L, wipe samples in ug/wipe, soil and sludge samples in mg/kg, and all TCLP /STLC /SPLP extracts in ug/L  
 \* numbered chromatogram resulting in occluded surrogate and sample peaks, m; surrogate peak is on elevated baseline, or; surrogate has been diminished by dilution of original extract.  
 † The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified diesel is significant; b) diesel range compounds are significant no recognizable pattern; c) aged diesel? is significant; d) gasoline range compounds are significant; e) medium boiling point pattern that does not match diesel (?); f) one to a few isolated peaks present; g) oil range compounds are significant; h) lighter than water immiscible liquid is present; i) liquid sample that contains greater than ~5 vol. % sediment.
