Robert,

Expanding the 8260B analysis for the two wells referenced below during the next sampling event is acceptable.

Regards,

*Jerry Wickham*

Clearwater Project # ZP046D

Eagle Gas

4301 San Leandro Street, Oakland, CA

Dear Mr. Wickham;

Clearwater is sampling today and tomorrow at the Eagle Gas site for the First Quarter 2008 Groundwater Monitoring event.

Clearwater also recently performed a UST sampling at an adjacent property and received the analytical results of a sample of the UST contents this morning. The UST is located approximately 20 feet from the subject property. A full 8260B suite was run on the UST tank sample and various detections were reported. An unauthorized release has not yet been filled for the UST site.

We seek your permission to increase the analytical suite for the groundwater samples from wells MW-4 and MW-4D, from a partial 8260B analysis to a full 8260B analysis. Running these samples for a full 8260B analysis will allow Clearwater to compare the groundwater sample results with the UST contents samples results. This will be a one time event.

Please let us know within the next three days, as this will provide a unique opportunity to further our knowledge of the site and surrounding area conditions.

Sincerely,

Robert L. Nelson, PG, CEG  
Senior Geologist
