RE: Surety Bond for Off-Site Monitoring Wells

Dear Mr. Sappal,

HerSchy Environmental Inc. is pleased to inform you that we have coordinated with the Alameda County Environmental Health Department regulator, and have obtained samples from ongoing construction in the roadway adjacent to 6211 San Pablo Avenue. The samples will help in determining contamination mass estimates for your site.

We eagerly await your response to our February 5, 2007 letter asking your cooperation in obtaining surety bonds required by the City of Oakland to proceed with encroachment permits for two off-site monitoring wells. Data from the monitoring wells will allow us to complete contamination mass estimates for your site. As you are aware, HerSchy Environmental Inc. performed significant negotiation with the City of Oakland to allow the surety bonding process, and we do not want to lose the window of opportunity to install the monitoring the wells as soon as possible.

If you are having difficulty obtaining the required surety bonds, please contact us at your earliest opportunity, it is imperative that we proceed with monitoring well installation as soon as possible. We cannot proceed without your continued cooperation.

With best regards,
HerSchy Environmental Inc.

Scott Jackson
Senior Project Geologist
