FOURTH QUARTER 2001 MONITORING REPORT

Cambria Project No. 580-0917

February 12, 2002

INTRODUCTION

On behalf of Douglas Parking, Cambria Environmental Technology, Inc. (Cambria) is submitting this fourth quarter 2001 groundwater monitoring report for the above-referenced site. Presented below are the fourth quarter 2001 activities and the anticipated first quarter 2002 activities.

FOURTH QUARTER 2001 ACTIVITIES

Monitoring Activities

Field Activities: On October 25, 2001, Cambria gauged depth-to-water and inspected for separate-phase hydrocarbons (SPH) in site wells MW-1 through MW-5. Groundwater samples were collected from monitoring wells MW-2, MW-3, MW-4, and MW-5. Well MW-1 is not part of the sampling schedule. Field data sheets are presented as Appendix A.

Sample Analyses: The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by modified EPA Method 8015, and benzene, toluene, ethylbenzene and xylene (BTEX) and methyl tert-butyl ether (MTBE) by EPA Method 8020 by McCampbell Analytical, Inc. of Pacheco, California. MTBE concentrations were not detected by EPA Method 8020, so confirmation analysis by EPA Method 8260 was not performed. The laboratory analytical report is included as Appendix B.

Monitoring Results

Groundwater Flow Direction: Based on depth-to-water data collected during Cambria's October 25, 2001 site visit, groundwater beneath the site flows toward the north with an average gradient of 0.007 feet/feet (see Figure 1). Depth-to-water and groundwater elevation data are presented in Table 1.

Hydrocarbon Distribution in Groundwater: No SPH was detected in any site wells. The maximum detected TPHg concentration was 11,000 micrograms per liter ($\mu\text{g/l}$) in groundwater samples collected from upgradient well MW-3. The maximum benzene concentration detected was 620 $\mu\text{g/l}$ in groundwater samples from source area well MW-2. No benzene was detected in upgradient well MW-3. Consistent with historical groundwater data, groundwater samples from downgradient well MW-5 contained no detectable hydrocarbons above laboratory reporting limits. Also consistent with historical data, hydrocarbon concentrations detected in downgradient and crossgradient well MW-4 were low: 110 $\mu\text{g/l}$ TPHg, 0.70 $\mu\text{g/l}$ benzene, and 3.3 $\mu\text{g/l}$ xylenes. No MTBE was detected above laboratory reporting limits in any analyzed groundwater sample. The analytical results are summarized on Table 1.

ANTICIPATED FIRST QUARTER 2002 ACTIVITIES

Monitoring Activities

Cambria will gauge the site wells, inspect the wells for SPH, and collect groundwater samples from all wells not containing SPH. If MTBE is detected in any groundwater sample, concentrations will be confirmed using EPA Method 8260. Following field activities, Cambria will tabulate the data, contour site groundwater elevations, and prepare a groundwater monitoring report.

Corrective Action Activities

Cambria will continue coordination of feasibility testing that was approved by the California UST Cleanup Fund (Fund). The testing will evaluate the feasibility and effectiveness of air sparging and soil vapor extraction at the subject site.
