**Re: Former Chevron Service Station #9-0020
1633 Harrison Street
Oakland, California**

Dear Mr. Peacock:

Enclosed is the Third Quarter Groundwater Monitoring report for 1998, prepared by our consultant Blaine Tech Services, Inc. for the above noted facility. As noted in the report, ground water samples were analyzed for TPH-g, BTEX, and MtBE constituents. Monitoring wells MW-7, MW-9, MW-13, MW-15, and MW-16 are sampled semiannually per letter from your office dated March 6, 1997. Wells MW-1 thru MW-6, MW-8, MW-10, MW-11, MW-12 and MW-14 were abandoned in January 1998.

The benzene concentration decreased in monitoring wells MW-7, MW-9 and MW-16 from the last sampling event. Monitoring well MW-15 was below method detection limits for all constituents while well MW-13 was below method detection limits for the BTE and MtBE constituents.

Groundwater depth varied from 19.40 feet to 20.20 feet below grade with a direction of flow northeasterly.

Oxygen releasing compound (ORC) was added to monitoring well MW-16 on July 23, 1998 and to well MW-7 on August 11, 1998. Since monitoring well MW-7 is upgradient of well MW-16, adding ORC into this well should assist in the natural attenuation of any hydrocarbons underneath Harrison Street and toward well MW-16. The ORC added to well MW-16 is expected to increase the availability of oxygen for natural attenuation surrounding and downgradient of this well. Additional sampling events will be required to confirm this.

Page 2

Why?

It does not appear that an additional investigation is warranted downgradient of monitoring well MW-16 since natural attenuation is expected to occur around and downgradient of this well so as to cause plume stability or degradation of the hydrocarbon plume. Note that the distance to where any additional investigation could be conducted is ~~on~~ 19th Street and is located ~~about~~ 400 feet from monitoring well MW-16. It would be expected that the natural attenuation process would cause the petroleum hydrocarbon concentrations to decline to background levels prior to reaching 19th Street, due to this distance.

Chevron will continue to monitor the site semiannually. If you have any questions please call me at (925) 842-9136.

Sincerely,

Groundwater Sampling Report 980825-R-1

This report covers the routine monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table also contains new groundwater elevation calculations taken from the computer plotted gradient

map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
