1.0 INTRODUCTION

This report describes activities for the removal of two underground storage tanks (USTs) and soil/groundwater remediation at The Hertz Corporation (Hertz) former car rental facility located at One Airport Drive, Oakland, California. The site is located at Oakland International Airport, which is under the ownership, jurisdiction and authority of the Port of Oakland (*Figure 1*). Operations at the service center included fueling and vehicle maintenance. Unleaded gasoline was stored in one 12,000-gallon UST and waste oil was stored in one 500-gallon UST. The work described in this report was part of a larger project that included the demolition of the Hertz Car Rental facility and the restoration of the site to a parking lot to be used by the Port of Oakland.

1.1 Background Information

In 1988, three UST's were removed from a tank pit located approximately 20 feet north of the dispenser island. A new 12,000-gallon gasoline UST was installed approximately 20 feet north and east of the old tank pit (see *Figure 2*). In addition, a new underground distribution line was installed from the new UST to the existing dispenser island.

Assessment activities began subsequent to tank removal activities in 1988. Nine monitoring wells were installed as part of the assessment activities conducted between 1991 and 1993. Between 1993 and 1999, 12 groundwater monitoring events were conducted. During this time frame, concentrations of petroleum hydrocarbons decreased across the site. The highest concentration of impacted groundwater was located near the dispenser area (monitoring well MW-4).

In-situ groundwater remediation was conducted in 1999 and 2001. In 1999, oxygen releasing compound (ORC) socks were placed in monitoring well MW-4. In 2001, ORC was injected into 34 locations (push probe locations) in the dispenser area.

In 2002, Hertz began demolition activities at their facility. As part of the demolition activities, the USTs and associated piping were scheduled for removal. Hertz requested the impacted soil near MW-4 be excavated as part of source removal. In addition, the impacted groundwater in the excavation would be in-situ chemically oxidized instead of removal and treatment.

On March 5, 2002, a work plan was submitted (and subsequently approved) to the Alameda County Environmental Health Services Agency (ACEHSA) to remove the two USTs, over excavate the impacted soils around the dispenser area, and treat the groundwater in the excavation using chemical oxidation.

2.0 UST REMOVAL, SOIL EXCAVATION, AND LABORATORY RESULTS

2.1 UST Removal Activities

Prior to removing the USTs and piping, the dispensers were removed as part of the facility's general demolition activities. On May 21, 2002, American Construction Inc. (ACI) removed both USTs (one 12,000-gallon unleaded gasoline UST and one 500-gallon waste oil UST) from the property under the direction of an Oakland Fire Service Agency, Office of Emergency Services (OFSA) Inspector, Mr. Keith L. Matthews. Additionally, Mr. Dale Klettke of the Port of Oakland and Mr. Barney Chan of ACEHSA were present during the UST removals. The UST locations are shown in *Figure 2*. Copies of UST removal related permits and documents are included in *Appendix A*.

Product still present in the USTs was removed and the USTs were then cleaned and rinsed. Both USTs were inerted with dry ice. The atmosphere inside each tank was verified using a Lower Explosion Limit/Oxygen (LEL/O₂) meter prior to moving the tanks. ACI removed the overburden of the USTs, removed soil from around the piping and stockpiled the excavated materials, which consisted primarily of pea gravel. Upon removal of the USTs, water filled the excavations to three feet of the ground surface.

No holes were observed in either of the USTs. The tanks appeared to be in good condition. Additionally, the piping that led from 12,000-gallon gasoline USTs to the dispensers was removed. The USTs and piping were loaded directly onto a truck supplied by Ecology Control Industries, Inc., who hauled them to their recycling/disposal facility in Richmond, California. Copies of the UST hazardous waste manifests and certificates of destruction are provided in *Appendix B*.

2.2 Soil Excavation

UST and Piping Areas

During UST removal, monitoring for impacted soils was performed using an organic vapor analyzer (OVA) and visual evidence. If impact was observed, the soils would be excavated for treatment. No visual or olfactory observations of impacted soils were made during either UST removal. However, impacted soil was encountered in the pipe trench near the dispensers. This impacted area was part of the dispenser over-excavation activities.

Dispenser Area

As previously described, impacted soil and groundwater was previously documented in the area of the dispensers. ATC initially anticipated an area 20 feet wide by 40 feet long by 8 feet deep to be excavated as part of the tank removal activities. During excavation activities, impacted soils were observed and removed. The resultant excavation was approximately 20 feet wide by 35 feet long by 9 feet deep. The extent of the southern edge of the excavation was restricted due to the presence of a chain link fence and an underground electrical line located south of the dispenser area. *Figure 3* illustrates the extent of excavation.

Following the completion of the excavation, small amounts of groundwater were observed to be infiltrating into the excavation at a depth of approximately eight feet below ground surface (bgs). On May 22, the groundwater in the excavation equilibrated at a depth of approximately six feet bgs. The impacted soil was staged on-site until analytical results were received. Following the treatment of the groundwater (section 3) in the excavation, the ACEHSA approved backfilling. Soil impacted with petroleum hydrocarbons was stockpiled, profiled and transported as non-hazardous material to Forward Landfill in Manteca, California. Copies of non-hazardous waste manifests are included in *Appendix B*.

2.3 Sampling and Analysis

ATC personnel collected soil and groundwater samples subsequent to UST and piping removal and post excavation activities. Soil sampling protocol consisted of driving a soil sampler lined with brass tubes into the materials to be sampled, extracting the sampler and tubes, removing the tubes from the sampler, and capping both ends of the selected tubes with Teflon™-tape and non-reactive plastic end caps. Groundwater sampling protocol consisted of bringing the pre-cleaned glass container to the surface and transferring the water into appropriate laboratory-supplied containers. The containers were then labeled, placed into Ziploc™-type plastic bags, and the sampling information was recorded on chain-of-custody records. The plastic bags containing the samples were then placed in an ice filled cooler and shipped to the laboratory. Strict chain-of-custody protocols were followed during sampling, handling and

transporting of the samples to the laboratory.

The following sections summarize the sample locations, analytical parameters for the soil and groundwater and the analytical results for each area. For reference purposes, the following analytical methods were used for soil and groundwater:

Gasoline Parameters

- Total Petroleum Hydrocarbons as Gasoline (TPHg), Method 8015
- Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX compounds) and Methyl Tertiary Butyl Ether (MTBE), Method 8020

Waste Oil Parameters

- TPH, Method 8015
- Oil and Grease, Method 413.1
- Polynuclear Aromatic Hydrocarbons (PAHs), Method 8270
- Volatile Organic Compounds (VOCs), Method 8260
- Polychlorinated biphenyls, Method 8081
- LUFT Metals, Method 6010

ATC has included, within each table of analytical results, the appropriate local, state, and federal regulatory citation. The referenced regulatory citations are provided in *Appendix C*.

Gasoline UST Area

Two soil samples (G-N and G-S) were collected from the gasoline UST excavation at three feet below ground surface (bgs) (see *Figure 2*). Additionally, seven discrete soil samples (P-1 through P-7) were collected at approximately 20-foot intervals beneath the gasoline UST piping (*Figure 2*), and one groundwater sample was collected from each of the UST excavations.

Soil samples collected from the gasoline UST excavation and from under the piping were analyzed for TPH-g, BTEX, and MTBE. Neither of the soil samples collected from the gasoline UST excavation contained detectable quantities of TPH-g, BTEX or MTBE (*Table 1*). Of the seven piping samples collected, only one (P-7) contained detectable quantities of TPH-g (520 milligrams per kilogram [mg/kg]), toluene (4.7 mg/kg), ethylbenzene (6.3 mg/kg) and total xylenes (41 mg/kg). As previously mentioned, this soil was removed as part of the dispenser area excavation. Laboratory reports are provided in *Appendix D* and summarized in *Table 1*.

The groundwater sample (G-1) collected from the gasoline UST excavation was analyzed for TPH-g, BTEX, and MTBE. The sample did not contain detectable concentrations of TPH-g, benzene, toluene and ethylbenzene. Total xylenes (1,500 micrograms per liter [$\mu\text{g/L}$]) and MTBE (23,000 $\mu\text{g/L}$) were detected in the sample. Laboratory reports are provided in *Appendix D* and summarized in *Table 2*.

Waste Oil UST

One discrete soil sample (WO-1) was collected from the waste oil UST excavation above the water table (approximately three feet bgs) near the fill end of the UST. The soil sample was analyzed for organic parameters (TPH-g, TPH-d, BTEX, MTBE, oil and grease, VOCs, PCBs, PAHs) and inorganic

parameters (LUFT metals). Laboratory results showed non-detectable concentrations for the organic constituents. Of the inorganic analytes, total chromium (20 mg/kg), nickel (15 mg/kg) and zinc (14 mg/kg) were detected in the soil samples. Laboratory reports are provided in *Appendix D* and summarized in *Table 1*.

The groundwater sample (WO-1) collected from the waste oil excavation was analyzed for TPH-g, BTEX, MTBE, oil and grease, VOCs, PCBs, PAHs and LUFT metals. The sample did not contain detectable concentrations of TPH-g, benzene, ethylbenzene, xylenes, oil and grease, PCBs and/or PAHs. TPH-d (130 µg/L), toluene (0.9 µg/L) and MTBE (7.6 µg/L) were detected in the groundwater sample. Total chromium (5.5 µg/L), nickel (88 µg/L) and zinc (130 µg/L) were also detected in the groundwater sample. Neither cadmium nor lead was detected in the sample. Laboratory reports are provided in *Appendix D* and summarized in *Table 2*.

Dispenser Area Excavation

Soil samples were collected from each sidewall and bottom of the excavation (EX-N, EX-E, EX-S, EX-W, and EX-B). The samples were analyzed for TPH-g, BTEX, and MTBE. TPH-g (29 mg/kg), toluene (0.077 mg/kg), ethylbenzene (0.13 mg/kg), and xylenes (1.08 mg/kg) were detected in the sample from the southern wall of the excavation (EX-S). No petroleum analytes were detected in the remaining soil samples collected. Laboratory reports are provided in *Appendix D* and summarized in *Table 1*.

The groundwater sample from the dispenser area excavation (EW-1) was analyzed for TPH-g, BTEX, and fuel oxygenates, including MTBE. The results indicate TPH-g (30,000 µg/L), benzene (840 µg/L), toluene (4,200 µg/L), ethylbenzene (990 µg/L), and xylenes (6,300 µg/L) were detected. Laboratory results are provided in *Appendix D* and summarized in *Table 2*.

Stockpile

Two composite samples (A & B) from the excavated soil stockpile were analyzed for TPH-G, BTEX, MTBE, and lead. Both samples contained detectable concentrations of TPH-g, (30 and 3.4 mg/kg), xylenes (0.41 and 0.126 mg/kg), and lead (both samples at 2.5 mg/kg). In addition, sample B contained 0.028 mg/kg of toluene. The soils were loaded and shipped to Forward Landfill in Manteca, California for disposal. Copies of the nonhazardous waste manifests are provided in *Appendix B*.

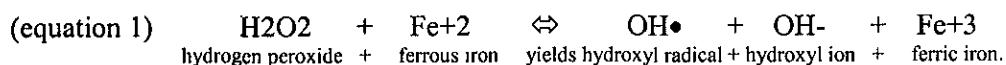

3.0 GROUNDWATER TREATMENT

3.1 Treatment Technology

On June 7, 2002, ATC treated the groundwater in the pit associated with the dispenser area excavation. The groundwater in the gasoline and waste oil UST excavations was also treated on July 12, 2002. Prior to the implementation of field activities, the site-specific Health and Safety Plan (HASP) was updated to describe the hazards and safety procedures for dispensing chemicals in the field. Personal protective equipment (PPE) was upgraded to include: chemical resistant boots or boot covers, chemical resistant gloves, chemical resistant apron, splash goggles, and face shields.

The Fenton process utilizes hydrogen peroxide and a catalyst (ferrous iron) to create hydroxyl free radicals (equation 1). The hydroxyl free radical ($\text{OH}\bullet$) is a powerful oxidizer of organic compounds and is capable of oxidizing even the most complex organic compounds (equation 2). The organic compounds are successively broken down into non-hazardous carbon dioxide and water. Residual hydrogen peroxide and iron are rapidly broken down into water and oxygen or precipitated as ferric iron.

The reaction is most efficient with a pH range of 3 to 5.5. ATC used sulfuric acid to aid in the lowering of the pH.

The following procedures were utilized:

- A small double diaphragm pump was setup to assist in circulating and mixing the chemicals and water in the excavation.
- Approximately 4 gallons of sulfuric acid (50%) was added to the excavation water. For safety reasons, the acid was diluted prior to addition to the excavation. The acid lowered the pH of the water to 5.5.
- Approximately 50 pounds of iron sulfate was then mixed into a solution with water and added to the excavation.
- Finally, hydrogen peroxide (50%) solution was diluted to five percent and added to the water in the excavation.

Upon the addition of the hydrogen peroxide, the reaction was clearly visible.

3.2 Post Treatment Sampling

Groundwater samples were collected from each excavation after treatment. The protocol for groundwater sampling is discussed in Section 2.3. The samples were analyzed for TPHg, BTEX, and MTBE. Laboratory results are provided in *Appendix D* and summarized in *Table 2*. The chemical oxidation treatment reduced the petroleum compounds in the groundwater greater than 98 percent. These reduced levels were sufficient to place backfill into each excavation in preparation for site closure.

On July 11, 2002, the ACHCSA acknowledged, in a letter to Hertz (*Appendix E*), "the treatment of the former pump island area with Fenton's reagent has apparently been successful in oxidizing residual TPH contamination in groundwater." In addition, the ACHCSA requested groundwater samples be collected from the monitoring well network (in order to facilitate site closure). The groundwater data from the subsequent monitoring will be provided in a separate report.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The facility was used as a car rental operation for more than 15 years. As part of the operations, petroleum products were stored and dispensed. Assessment activities conducted in the early 1990's included the installation of a monitoring well network. Groundwater samples collected from the monitoring well network over the past 10 years indicate the plume remained defined and petroleum analytes decreasing in concentrations. During this time frame, two events of ORC socks/injection were performed to aid in decreasing the petroleum analytes.

In early 2002, Hertz began demolition activities at the site to make way for airport expansion and parking. A work plan for tank removal, source removal, and in-situ chemical oxidation was submitted and approved by the ACEHSA. This plan was implemented between May and August 2002. Confirmatory soil and groundwater samples were collected and indicate the source of impacted soil and groundwater was removed or treated in-situ.

Based on the activities conducted, ATC recommends one groundwater monitoring event be conducted. If the data were consistent with previous sampling events, ATC would recommend the site be closed.

5.0 CERTIFICATION

We certify that, to the best of our knowledge, all information provided in this report is true and correct.

I hereby agree to comply with all requirements of this permit and Alameda County Ordinance No. 73-68.

APPLICANT'S SIGNATURE John Love DATE 3-14-02

PERMIT PRINT NAME John Love DATE 3-14-02

PERMIT CONDITIONS

Circled Permit Requirements Apply

A. GENERAL

1. A permit application should be submitted so as to arrive at the ACPWA office five days prior to proposed starting date.
2. Submit to ACPWA within 60 days after completion of permitted original Department of Water Resources Well Completion Report.
3. Permit is void if project not begun within 90 days of approval date.

B. WATER SUPPLY WELLS

1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specifically approved.

C. GROUNDWATER MONITORING WELLS INCLUDING PIEZOMETERS

1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
2. Minimum seal depth for monitoring wells is the maximum depth practicable or 20 feet.

D. GEOTEXTICAL

Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings.

E. CATHODIC

Fill hole anode zone with concrete placed by tremie.
 F. WELL DESTRUCTION - EXCAVATION
 Set a map of work site. A separate permit is required for wells deeper than 45 feet.

G. SPECIAL CONDITIONS

NOTE: One application must be submitted for each well or well destruction. Multiple borings on one application are acceptable for geotechnical and contamination investigations.

FOR: ECOLOGY CONTROL IND TANK NO. 30745

LOCATION: RICHMOND CA DATE: 6/4/2002 TIME: 8:29.55

VISUAL GASTECH/1014 SNOM TEST METHOD LAST PRODUCT UG

This is to certify that I have personally determined that this tank is in accordance with the American Petroleum Institute and have found the condition to be in accordance with its assigned designation. This certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

TANK SIZE 12000 SAFE FOR FIRE
CONDITION

REMARKS: OXYGEN 20.9% LOWER EXPLOSIVE LIMIT LESS THAN 0.1% ECOLOGY CONTROL INDUSTRIES
FIRST CERTIFIES THAT THE ABOVE NUMBERED TANK HAS BEEN CUT OPEN, PROCESSED
AND THEREFORE DESTROYED AT OUR PERMITTED HAZARDOUS WASTE FACILITY
ECOLOGY CONTROL INDUSTRIES HAS THE APPROPRIATE DRAFTS COIL AND MAC ACCEPTED
THE TANK SHIPPED TO US FOR PROCESSING

In the event of any physical or atmospheric changes affecting the gas-free conditions of the above tanks, or if in any doubt, immediately stop all hot work and contact the undersigned. This permit is valid for 24 hours if no physical or atmospheric changes occur.

STANDARD SAFETY DESIGNATION

SAFE FOR MEN: Means that in the compartment or space so designated (a) The oxygen content of the atmosphere is at least 19.5 percent by volume; and that (b) Toxic materials in the atmosphere are within permissible concentrations; and (c) In the judgment of the Inspector, the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Inspector's certificate.

SAFE FOR FIRE: Means that in the compartment so designated (a) The concentration of flammable materials in the atmosphere is below 10 percent of the lower explosive limit; and that (b) In the judgment of the Inspector, the residues are not capable of producing a higher concentration than permitted under existing atmospheric conditions in the presence of fire and while maintained as directed on the Inspector's certificate, and further, (c) All adjacent spaces have either been cleaned sufficiently to prevent the spread of fire, are satisfactorily inerted, or in the case of fuel tanks, have been treated as deemed necessary by the Inspector.

The undersigned representative acknowledges receipt of this certificate and understands the conditions and limitations under which it was issued.

Project Name: Hertz Oak

Date Received: 05/22/02

Project Number: 75.75015.0002 T4

P.O. Number: 75.75015.0002 T4

Project Notes: Report amended 7/2/02. See narrative.

On May 22, 2002, samples were received under documented chain of custody. Results for the following analyses are attached:

<u>Matrix</u>	<u>Test</u>	<u>Method</u>
Liquid	EPA 8082A	EPA 8082A
Solid		EPA 8082A

Case Narrative: Report amended 7/2/02 to include originally requested analytical results for PCB's on samples 30086-004 (WO-1) and 30086-005 (WO-1). Although the samples were extracted on 5/24/02, due to a laboratory error, the sample extracts were not analyzed until 7/2/02. The holding time for analysis of extracts is 40 days. No analysis exceeded holding time requirements. Due to the laboratory error, these results are not subject to invoicing.

Chemical analysis of these samples has been completed. Summaries of the data are contained on the following pages. USEPA protocols for sample storage and preservation were followed.

Entech Analytical Labs, Inc. is certified by the State of California (#2346). If you have any questions regarding procedures or results, please call me at 408-588-0200.

Sincerely,

Patti Sandrock
QA/QC Manager

STANDARD LAB QUALIFIERS (FLAGS)

All Entech lab reports now reference standard lab qualifiers. These qualifiers are noted in the adjacent column to the analytical result and are adapted from the U.S. EPA CLP program. The current qualifier list is as follows:

Qualifier (Flag)	Description
U	Compound was analyzed for but not detected
J	Estimated value for tentatively identified compounds or if result is below PQL but above MDL
N	Presumptive evidence of a compound (for Tentatively Identified Compounds)
B	Analyte is found in the associated Method Blank
E	Compounds whose concentrations exceed the upper level of the calibration range
D	Multiple dilutions reported for analysis; discrepancies between analytes may be due to dilution
X	Results within quantitation range; chromatographic pattern not typical of fuel
Y	PQL is reported below MDL but verified against a standard analyzed at the client requested reporting limit of 0.5 ppb

RECEIVED

JUN 03 2002

Order: 30084
Project Name: Hertz Oak
Project Number: 75.75015.0002 T4
Project Notes:

Date Collected: 5/22/2002
Date Received: 5/22/2002
P.O. Number: 75.75015.0002 T4

On May 22, 2002, samples were received under documented chain of custody. Results for the following analyses are attached:

<u>Matrix</u>	<u>Test</u>	<u>Method</u>
Liquid	Gas/BTEX/MTBE	EPA 8015 MOD. (Purgeable) EPA 8020
Solid	Oxygenates by EPA 8260B	EPA 8260B
	Composite	Composite
	Gas/BTEX/MTBE	EPA 8015 MOD. (Purgeable) EPA 8020
Lead	EPA 6010B	

Chemical analysis of these samples has been completed. Summaries of the data are contained on the following pages. USEPA protocols for sample storage and preservation were followed.

Entech Analytical Labs, Inc. is certified by the State of California (#2346). If you have any questions regarding procedures or results, please call me at 408-588-0200.

Sincerely,

Patti Sandrock
QA/QC Manager

ATC Associates 6602 Owens Drive, #100 Pleasanton, CA 94588	Client Project ID: #75.75015.0001; Hertz- Oakland-Tank Pull	Date Sampled: 06/11/02
		Date Received: 06/11/02
	Client Contact: Don Kubik	Date Reported: 06/12/02
	Client P.O.:	Date Completed: 06/12/02

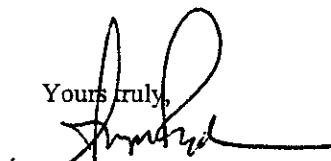

June 12, 2002

Dear Don:

Enclosed are:

- 1). the results of 1 samples from your #75.75015.0001; Hertz-Oakland-Tank Pull project,
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits. If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Yours truly,

Angela Rydelius, Lab Manager

QC SUMMARY REPORT FOR SW8021B/8015Cm

BatchID: 2402

Matrix: W

WorkOrder: 0206170

Compound	Sample	Spiked	MS*	MSD*	MS-MSD*	LCS	LCSD	LCS-LCSD	Acceptance Criteria (%)	
	µg/L	µg/L	% Rec.	% Rec.	% RPD	% Rec.	% Rec.	% RPD	Low	High
TPH(gas)	N/A	60	N/A	N/A	N/A	92.5	95.7	3.4	80	120
MTBE	N/A	10	N/A	N/A	N/A	105	96.3	9.1	80	120
Benzene	N/A	10	N/A	N/A	N/A	108	104	3.1	80	120
Toluene	N/A	10	N/A	N/A	N/A	112	110	1.7	80	120
Ethylbenzene	N/A	10	N/A	N/A	N/A	109	107	1.2	80	120
Xylenes	N/A	30	N/A	N/A	N/A	110	110	0	80	120
%SS	N/A	10	N/A	N/A	N/A	107	106	1.4	80	120

All target compounds in the Method Blank of this extraction batch were ND less than the method RL with the following exceptions.
NONE

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample, LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation

N/A = not enough sample to perform matrix spike, or analyte concentration in sample exceeds spike amount

% Recovery = $100 * (\text{MS-Sample}) / (\text{Amount Spiked})$; RPD = $100 * (\text{MS} - \text{MSD}) / (\text{MS} + \text{MSD}) * 2$

* MS and / or MSD spike recoveries may not be near 100% or their RPDs near 0% if: a) the sample is inhomogeneous AND contains significant concentrations of analyte relative to the amount spiked, or b) if that specific sample matrix interferes with spike recovery

Alameda, CA 94502-6577
(510) 567-6700
FAX (510) 337-9335

Dear Mr. Weaver:

Subject: Fuel Leak Site RO0000157, 1 Airport Drive, Oakland CA 94621

Alameda County Environmental Health, Local Oversight Program, has been informed of results from the recent underground tank removals at the referenced site. Based upon this information our office has the following technical comments and requests, which will facilitate site closure.

Technical Comments

- The treatment of the former pump island area with Fenton's reagent has apparently been successful in oxidizing residual TPH contamination in groundwater. The treatment also affected the residual absorbed contamination in soils beneath the groundwater.
- The groundwater sample from the former gasoline tank pit reported elevated MTBE concentrations. Our office, therefore, approved of the similar Fenton's reagent treatment of this groundwater.

Technical Report Request

- Please provide a copy of the underground tank removal and groundwater treatment reports to our office within 30 days after completing your groundwater treatment
- Please schedule a groundwater sampling event of all wells within 30 days after the completion of groundwater treatment. All wells are necessary since some wells were removed from sampling prior to discovering the recent MTBE release.

You may contact me at (510) 567-6765 if you have any questions.

Sincerely,

A handwritten signature in black ink that reads "Barney M. Chan".
