Attn: Mr. Amir Gholami; Haz Mat. Specialist for : 2896 Castro Valley Blvd., Castro Valley

Re: Report of Groundwater Sampling

Dear Mr. Gholami,

On January 4, 2000, a single round of groundwater samples were obtained from monitoring wells MW1 through MW3.

The groundwater samples were collected as follows:

Each well was bailed until the volume of water withdrawn was equal to at least four casing volumes. To assure that a representative groundwater sample was collected, periodic measurements of the temperature, pH and specific conductance were made. The sample was collected only when the temperature, pH, and/or specific conductance reached relatively constant values.

A hand operated bailer was used for evacuating each well casing (purging) of the monitor wells. Water samples were collected using a new, disposable bailer. An effort was made to minimize exposure of the sample to air.

Sample containers, obtained directly from the analytical laboratory, were labeled with self-adhesive tags. Field personnel labeled each tag, using waterproof ink, with the following information: Sampling location and number; project name; date and time samples were collected; treatment (preservatives, filtered, etc.); name of sampler

Subsequent to collection, the samples were immediately stored on ice in an appropriate ice chest. Samples were transported under Chain-of-Custody procedures to Priority Environmental Labs (Priority) of Milpitas.

Sampling equipment was cleaned after its use at each sampling location. Care was taken to collect all excess water resulting from the sampling and cleaning procedures. The excess water was contained in a pre-labeled 55-gallon drum on-site pending receipt of laboratory analyses.

The following analyses was performed by Priority on groundwater samples obtained from the monitor wells:

TPH-gas (EPA Method 8015M); BTEX (EPA Method 602)

The results of the groundwater sample were as follows:

Results in Parts Per Billion (PPB)

Well#	Sample#	TPH/g	Benzene	Toluene	EthylBenzene	Xylene	TPH/d
W-MW	MW1	ND	ND	ND	ND	ND	ND
E-MW	MW2	ND	ND	ND	ND	ND	ND
S-MW	MW3	ND	ND	ND	ND	ND	280

Determination of Horizontal Groundwater Gradient

On January 4, 2000, water levels in each of the monitor wells were measured within a one hour period. The assumed water surface elevations in the wells were calculated using the July, 1999 survey data. Then, the horizontal hydraulic gradient was calculated based on accurately determined well locations.

The gradient calculated showed a 0.43% slope in a southwestern direction. Figure 2 shows survey data and groundwater topography.

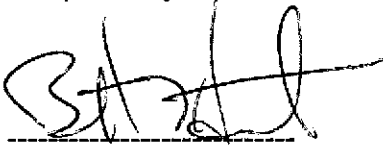

Soil Waste Disposal Manifests

PIERS is pleased to submit the five Browning-Ferris Industries (BFI) Vasco Road Landfill manifests for the disposal of petroleum contaminated soil on February 6, 1995 as well as the trucking tags from the known transporter of the soil, Maciel Trucking Inc. of San Jose, CA.

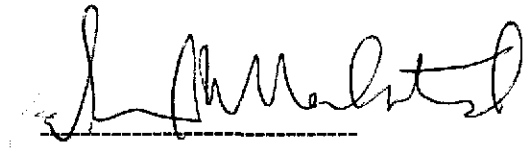

LIMITATIONS

The observations and conclusions presented in this report are professional opinions based on the scope of work outlined herein. This report was prepared in accordance with generally accepted standards of environmental geological practice in California at the time this investigation was performed. The opinions presented apply to site conditions existing at the time of our study and cannot apply to site conditions or changes of which we are not aware or have not had the opportunity to evaluate. This investigation was conducted solely to evaluate environmental conditions of the groundwater with respect to hydrocarbons identified during previous work. Evaluation of the geologic conditions at the site for the purpose of this investigation is made from a limited number of observation points. Subsurface conditions may vary away from the data points available. Additional work, including subsurface investigation, can reduce the inherent uncertainties associated with this type of investigation. It must be recognized that any conclusions drawn from these data rely on the integrity of the information available at the time of investigation and that a full and complete determination of environmental contamination and risks cannot be made.

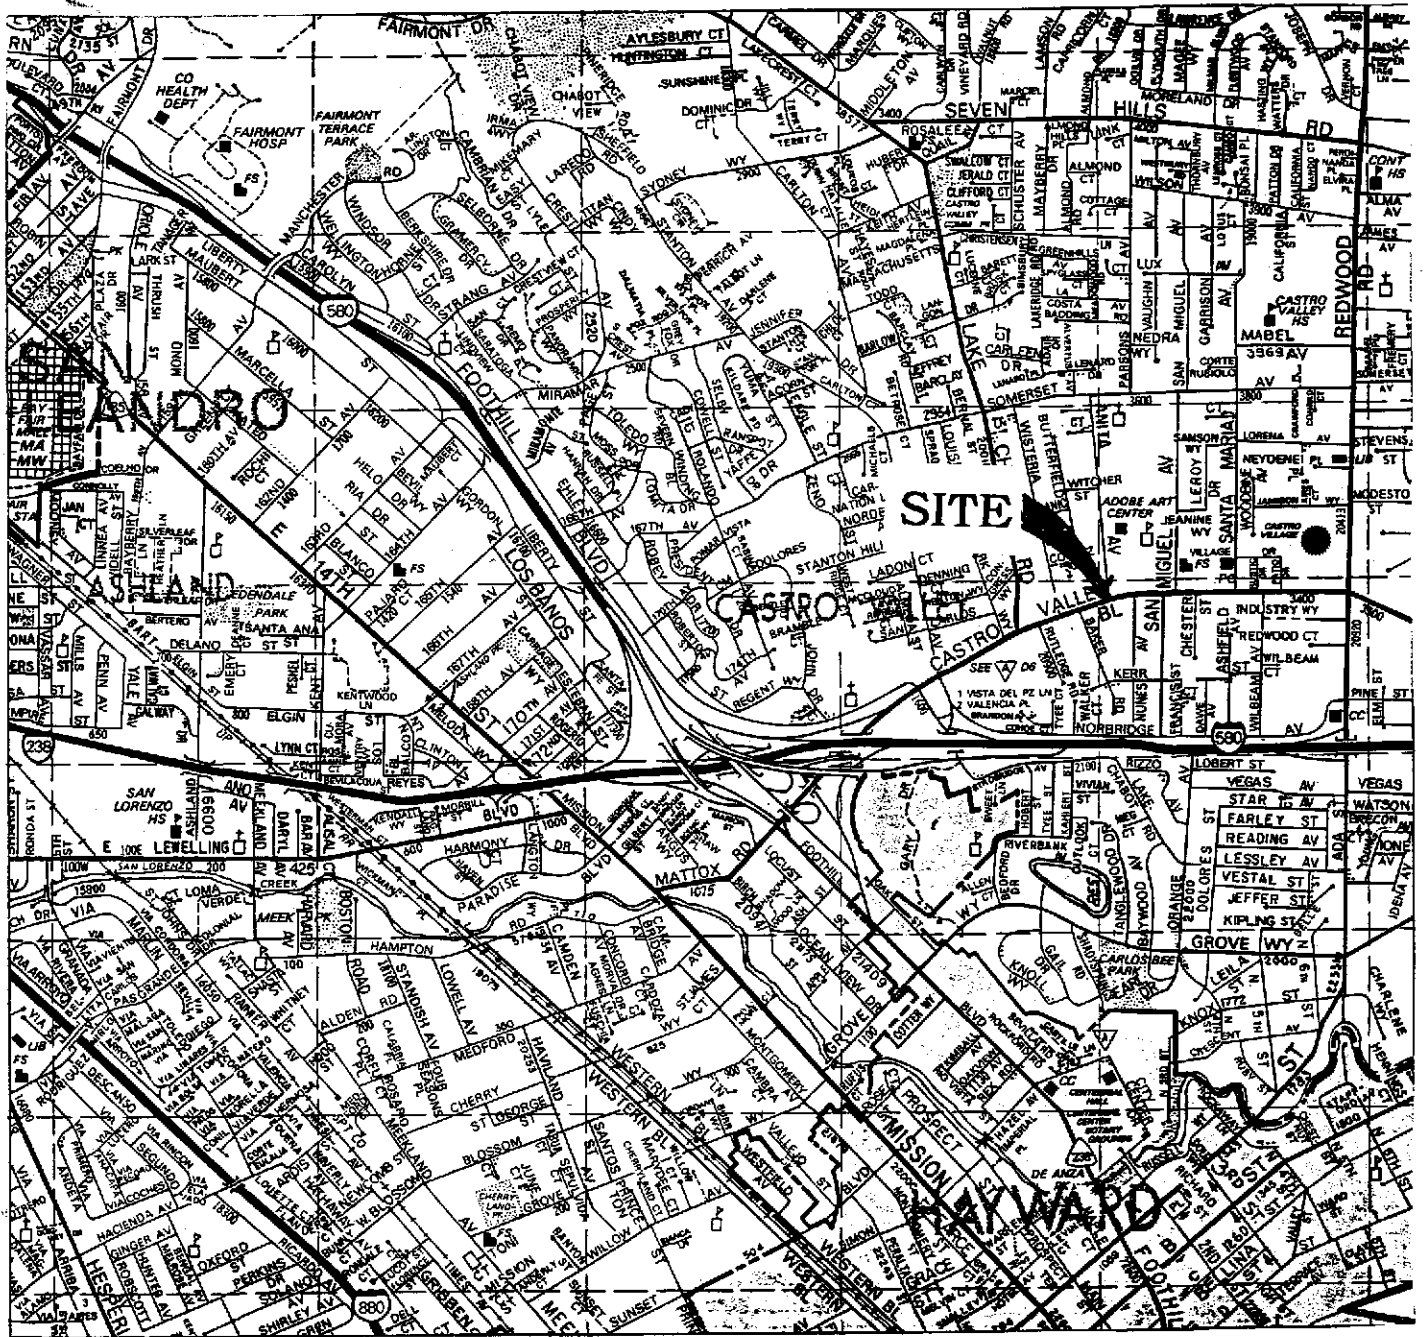

Respectfully submitted this 13th day of January, 2000,

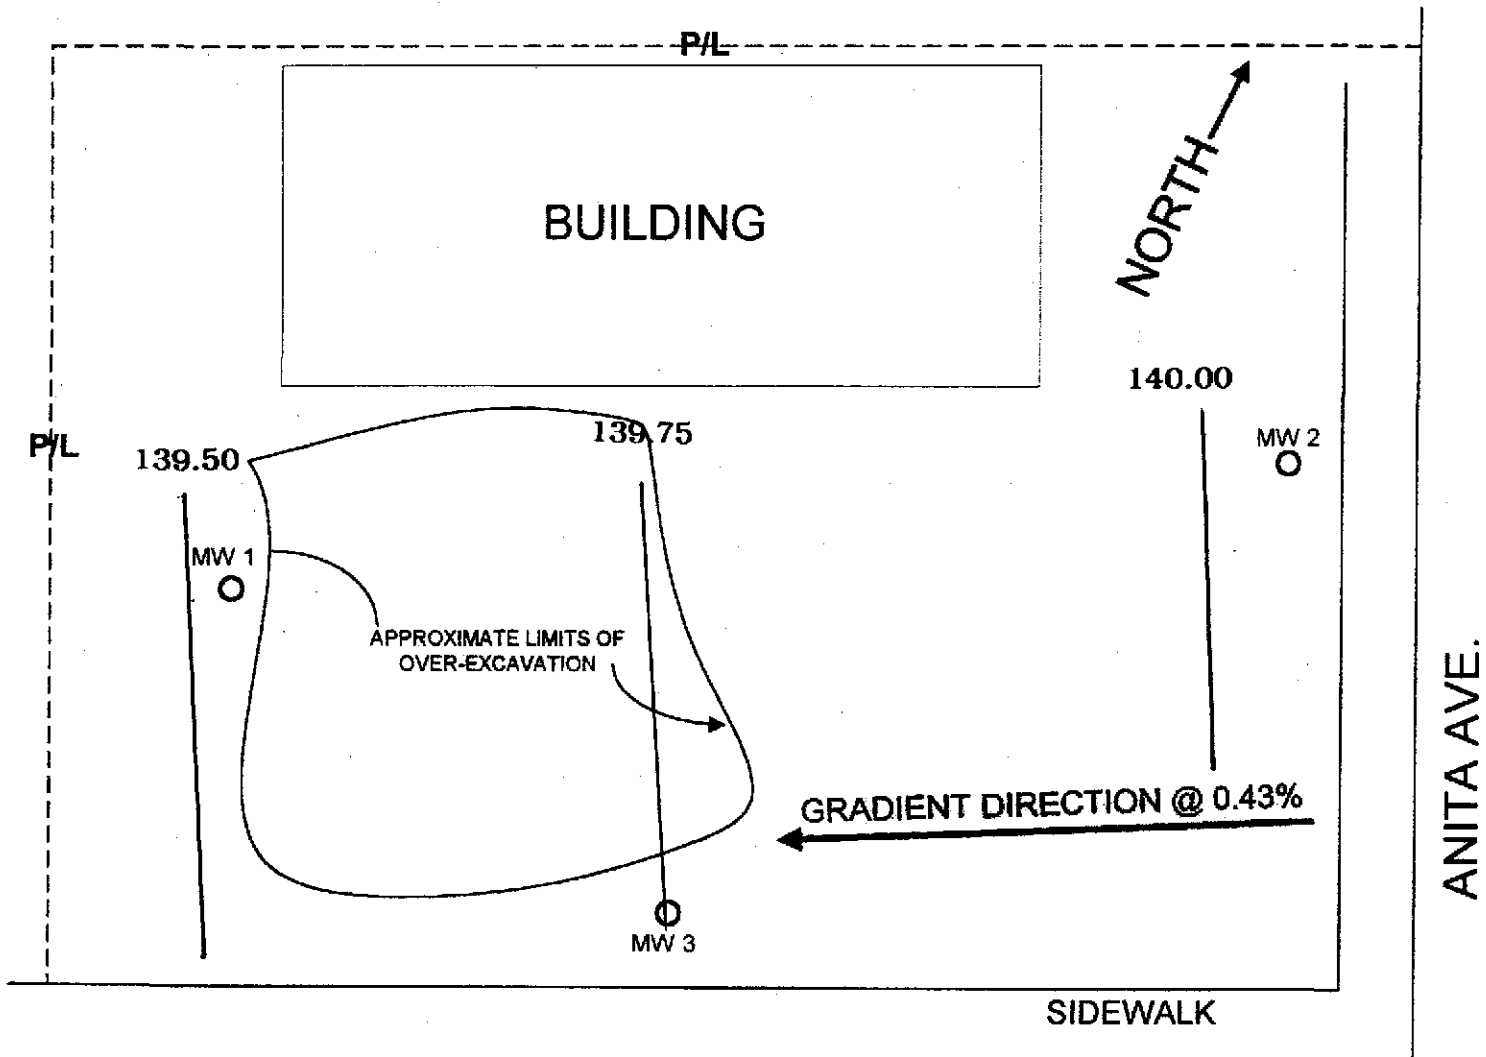

Bennett T Halsted
Project Manager

Samuel H Halsted P.E.
