Subject: Transmittal, Semi-Annual Groundwater Monitoring Report, Second Semester 2016
3635 13th Avenue, Oakland, California 94610
Toxics Case No. RO0000159

Dear Ms. Detterman:

Enclosed is the *Semi-Annual Groundwater Monitoring Report, Second Semester 2016* prepared at your request for activities at the subject site.

I declare under penalty of perjury, that the information and/or recommendations contained in the attached report for the above-referenced site are true and correct to the best of my knowledge.

If you have any questions or need additional information, please do not hesitate to contact Mr. Trent Weise of AEI Consultants at (925) 746-6000.

Sincerely,

A handwritten signature in blue ink, appearing to read "Kia Sumner".

Mr. Kia Sumner

Semi-Annual Groundwater Monitoring Report, Second Semester 2016
3635 13th Avenue, Oakland, California

1. INTRODUCTION

On behalf of Mr. Kia Sumner, AEI Consultants (AEI) has prepared this Semi-Annual Groundwater Sampling Report, Second Half 2016 to document the monitoring event performed at 3635 Thirteenth Avenue in Oakland, California ("the Site"). Site assessment is being conducted in cooperation with the Alameda County Department of Environmental Health (ACDEH). The sampling activities and results are discussed in detail below.

2. BACKGROUND

The Site is located on the western corner of Excelsior and Thirteenth Avenues in an urban and primarily residential area of the City of Oakland. The Site is currently vacant pending the planned construction of a single-family home. Figure 1 presents the Site location and vicinity. The Site was formerly occupied by a gasoline service station, which ceased operation in 1992. In December 1992, one 250-gallon waste oil underground storage tank (UST), one 500-gallon gasoline UST, and one 1,000-gallon gasoline UST were removed from the Site. Investigation and remediation activities have been performed at the Site to address petroleum hydrocarbons released from the former USTs at the Site.

Seven groundwater monitoring wells have been installed at the Site, MW-1 through MW-7. Monitoring wells MW-1, MW-2, and MW-3 were installed in March 1994. In April 2007, four additional groundwater monitoring wells, MW-4 through MW-7, were installed. Table 1 presents a summary of groundwater monitoring well construction details. Periodic groundwater monitoring has been performed with the groundwater monitoring wells since their installation. Figure 2 presents the Site plan, including the monitoring well locations.

3. STATUS REPORT

This section provides a status report of activities conducted during the second semi-annual monitoring event and activities proposed for the second semi-annual event.

3.1 Activities Conducted

Activities performed during the second semester of 2016 included:

- Performed semi-annual groundwater monitoring on November 30, 2016 and December 5, 2016.
- Meeting with ACDEH and Joint Execution Team (JET) on October 12, 2016 to discuss the Project Execution Plan (PEP) and Work Plan for additional investigation.
- Submitted PEP on December 13, 2016.
- Submitted the *Work Plan for Additional Site Investigation* on December 16, 2016 to the ACDEH for review and comment.
- ACDEH reviewed and concurred the scope of work proposed in PEP in an electronic mail message (email) dated December 16, 2016, and JET approved the PEP on January 12, 2017 by email.

Semi-Annual Groundwater Monitoring Report, Second Semester 2016
3635 13th Avenue, Oakland, California

3.2 Activities Proposed

Activities completed or proposed for the first semester of 2017 include:

- On January 25, 2017, monitoring wells MW-1 through MW-7 were resurveyed.
- Receive approval of the *Work Plan for Additional Site Investigation* from the ACDEH and perform the proposed investigation activities.
- Perform semi-annual groundwater monitoring in May 2017.
- Prepare a Corrective Action Plan presenting a remedial program to meet the requirements of the Low-Threat Underground Storage Tank Case Closure Program and continuing to work towards case closure.
- Implement the Corrective Action Plan

4. MONITORING ACTIVITIES

AEI performed the second semester groundwater sampling event on November 30 and December 5, 2016, including measuring depth to water and collecting groundwater samples from each of the seven groundwater monitoring wells at the Site as described below.

On November 30, 2016 groundwater samples were collected from each of the seven groundwater monitoring wells, MW-1 through MW-7. The wells were first purged using disposal bailers to a total volume of approximately three-well volumes. During well purging, groundwater parameters of temperature, pH, specific conductivity, dissolved oxygen (DO), and oxidation-reduction potential (ORP) were measured at approximately five-minute intervals. The wells were purged until either three-well volumes were achieved or significant well dewatering occurred. Visual estimates of turbidity were noted while purging the wells. Once three-well volumes were purged or significant well dewatering was achieved, groundwater samples were collected from each well using a disposal bailer. Samples for volatile analytes were collected into 40 milliliter (mL) hydrochloric acid (HCl) preserved volatile organic analysis (VOA) vials, with zero headspace (no air bubbles). Groundwater samples collected were entered onto the chain-of-custody record and placed in an ice chilled cooler pending transportation to the laboratory. Copies of the field forms for the groundwater monitoring event are included in Appendix A.

The collected groundwater samples were transported under proper chain-of-custody protocol to McCampbell Analytical, Inc. of Pittsburg, California (Department of Health Services Certification #1644) for analyses. Each groundwater sample collected was analyzed for methyl-tertiary butyl ether (MTBE), benzene, toluene, ethylbenzene, and total xylenes (collectively "BTEX compounds") for and total petroleum hydrocarbons as gasoline (TPH-g) using US EPA Testing Method 8260B, total petroleum hydrocarbons as diesel (TPH-d) and motor oil (TPH-mo) using US EPA Testing Method 8015M, with silica gel cleanup.

On November 5, 2016, groundwater elevations were measured in each of the monitoring wells at the Site. The well caps were removed and the wells were allowed to equilibrate with the atmosphere. The depth to water was then measured in each well to \pm 0.01 foot using an electronic depth to water meter. Table 2 presents the depth to water measurements collected and the calculated groundwater elevations.

Semi-Annual Groundwater Monitoring Report, Second Semester 2016
3635 13th Avenue, Oakland, California

Purged groundwater generated during the sampling event is stored onsite in a sealed, labeled, department of transportation (DOT) approved 55-gallon drum. The drum was disposed on December 16, 2016 as a non-hazardous waste by Advanced Environmental Services of Baker City, Oregon.

5. SUMMARY OF RESULTS

This section provides a summary of the results of the groundwater monitoring performed during the second semester monitoring event.

5.1 Groundwater Level Elevations

Groundwater elevations measured during the event were generally consistent with previous monitoring events. Groundwater elevation data is summarized in Table 2. Groundwater elevation contours are shown on Figure 3. Groundwater elevations are generally consistent with previous monitoring events, with groundwater flow direction generally towards the south-southeast.

5.2 Groundwater Sample Results

Table 3 presents a summary of compounds detected in groundwater samples collected and analyzed during the second semester groundwater monitoring event for 2016. Table 4 presents a summary of current and historical results for select compounds. Petroleum hydrocarbons continue to be detected in six of the seven groundwater monitoring wells. Consistent with previous groundwater monitoring events, no petroleum hydrocarbons were detected in MW-3. The concentrations of petroleum hydrocarbons detected were generally consistent with historical observations and can be summarized as follows:

- TPH-g and TPH-d were observed in six of the seven groundwater samples collected and analyzed, observed at maximum concentrations of 5,500 micrograms per liter ($\mu\text{g/L}$) and 3,900 $\mu\text{g/L}$, respectively.
- Methyl tyert butyl ether (MTBE) was detected in five of the seven groundwater samples collected and analyzed, observed at concentrations ranging from 3.6 $\mu\text{g/L}$ to 73 $\mu\text{g/L}$.
- Benzene was detected in five of the seven groundwater samples collected and analyzed, observed at concentrations ranging from 12 $\mu\text{g/L}$ to 4,400 $\mu\text{g/L}$.

Figures 5 and 6 present groundwater concentrations and isoconcentration contours for TPHg and benzene, respectively. In general, the extent of TPHg and benzene in groundwater is stable or decreasing. Laboratory analytical reports and chain of custody documentation are included in Appendix B.

Notes / Abbreviations:

MTBE - Methyl tert butyl ether

TPH-d - Total petroleum hydrocarbons (TPH) as diesel

TPH-g - Total petroleum hydrocarbons (TPH) as gasoline

- = sample not analyzed by this method

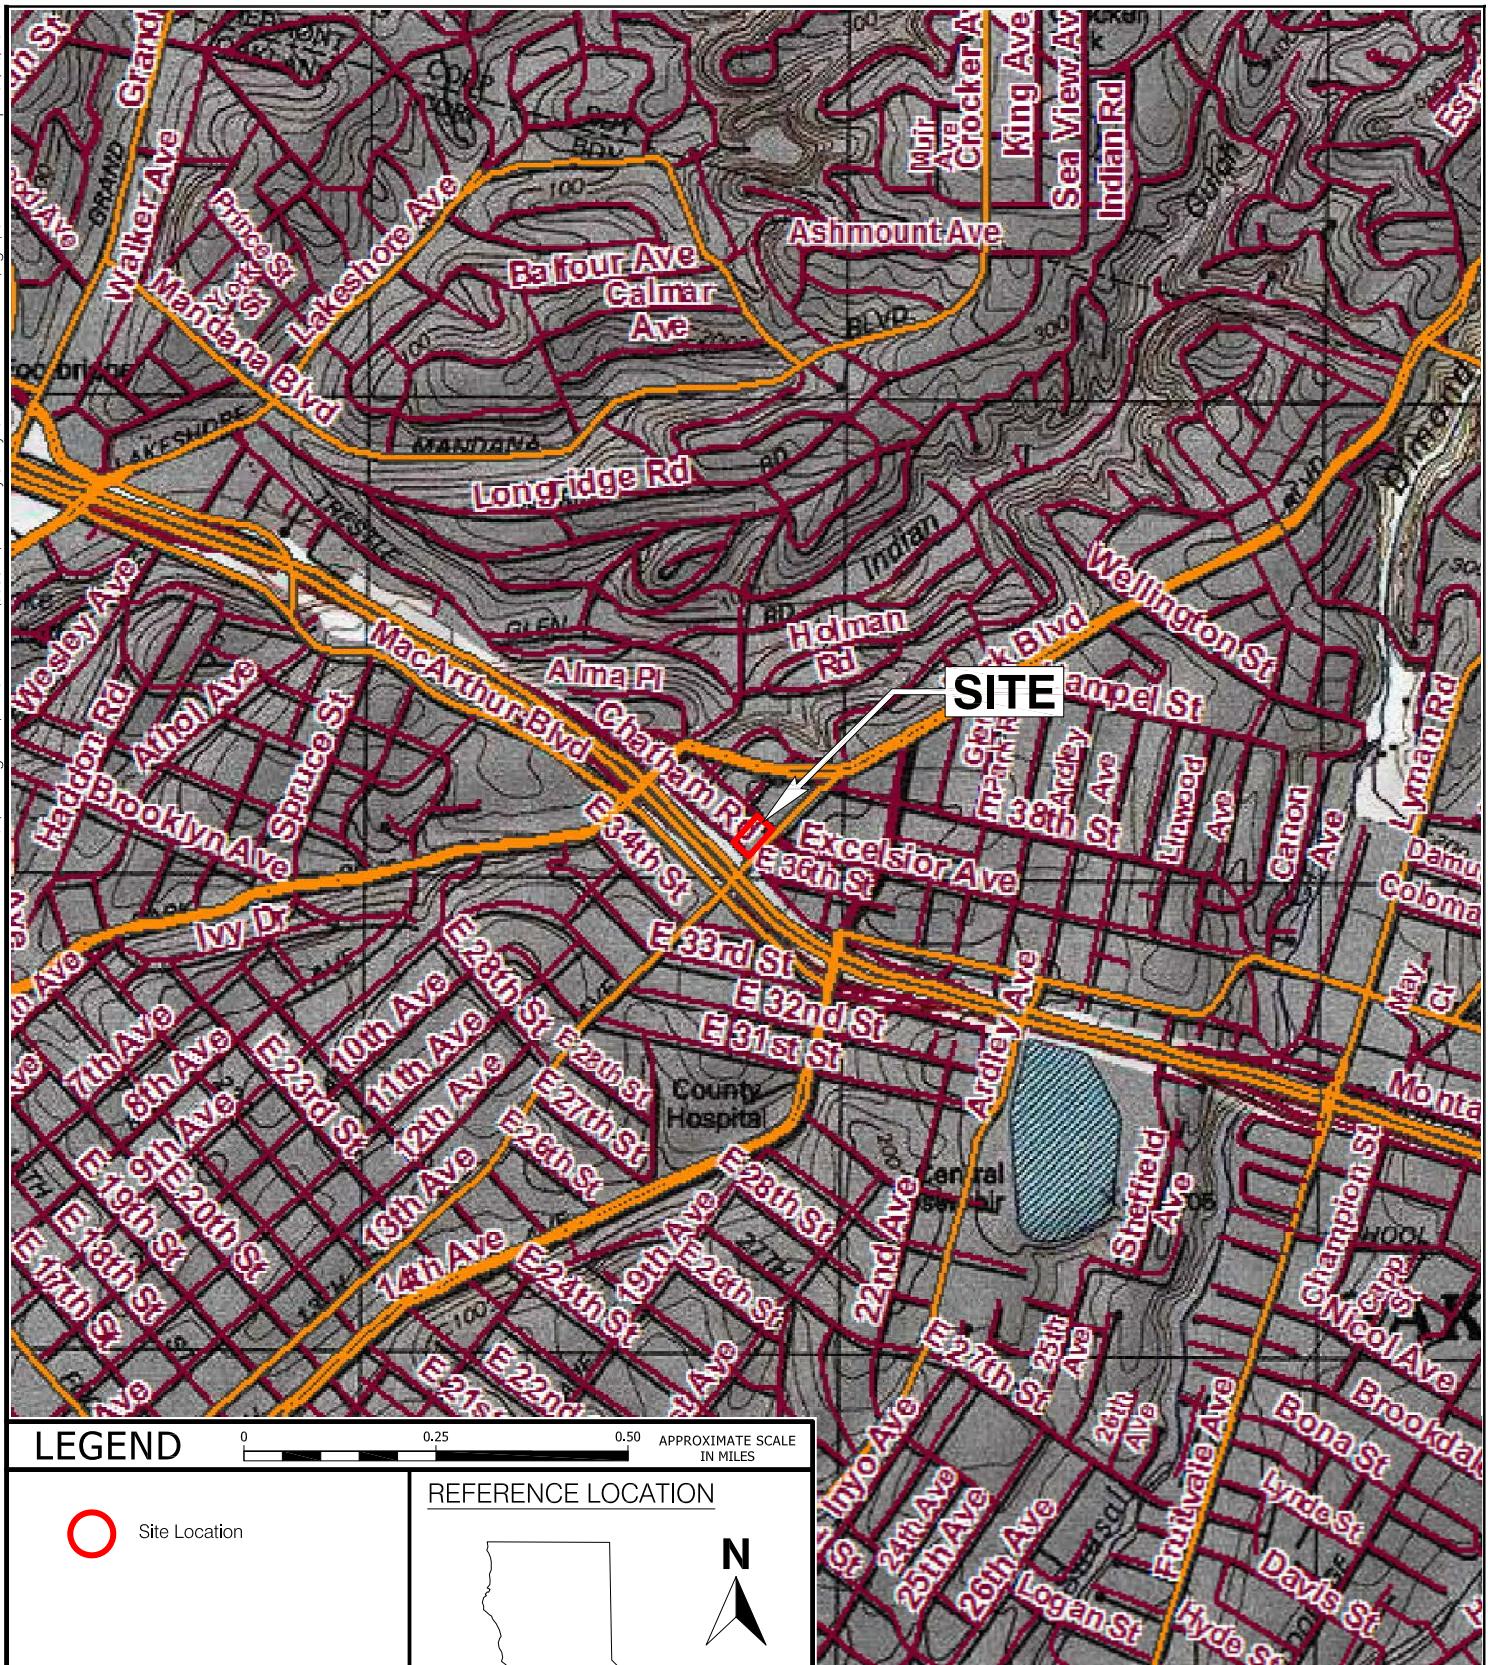

< = Less than reporting limit

¹ = well additionally analyzed for TPH as motor oil and hexachrome; all below laboratory detection limits.

ug/L - micrograms per liter

Bold = Most recent sample

GROUNDWATER MONITORING WELL FIELD SAMPLING FORM

Monitoring Well Number: **MW-1**

| | | | |
|------------------|---------------------------|-------------------|------------|
| Project Name: | Kia | Date of Sampling: | 11/30/2016 |
| Job Number: | 338841 | Name of Sampler: | N.Bricke |
| Project Address: | 3635 13th Avenue, Oakland | | |

MONITORING WELL DATA

| | |
|--|--------------------|
| Well Casing Diameter (2"/4"/6") | 2 |
| Wellhead Condition | Fair |
| Elevation of Top of Casing (feet above msl) | 197.28 |
| Depth of Well | 24.28 |
| Depth to Water (from top of casing) | 13.17 |
| Water Elevation (feet above msl) | 184.11 |
| Well Volumes Purged | 3.09 |
| Calculated Gallons Purged: formula valid only for casing sizes of 2" (.16 gal/ft), 4" (.65 gal/ft), and 6" (1.44 gal/ft) | 5.28 |
| Actual Volume Purged (gallons) | 5.5 |
| Appearance of Purge Water | Cloudy |
| Free Product Present? | No |
| | Thickness (ft): NA |

"When Quality Counts"

Analytical Report

WorkOrder: 1611D25

Report Created for: AEI Consultants

2500 Camino Diablo, Ste.#200
Walnut Creek, CA 94597

Project Contact: Wayne Hung

Project P.O.: 122586

Project Name: Kia/338841

Project Received: 11/30/2016

Analytical Report reviewed & approved for release on 12/07/2016 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants

Project: Kia/338841

WorkOrder: 1611D25

Glossary Abbreviation

| | |
|--------------|--|
| %D | Serial Dilution Percent Difference |
| 95% Interval | 95% Confident Interval |
| DF | Dilution Factor |
| DI WET | (DISTLC) Waste Extraction Test using DI water |
| DISS | Dissolved (direct analysis of 0.45 µm filtered and acidified water sample) |
| DLT | Dilution Test (Serial Dilution) |
| DUP | Duplicate |
| EDL | Estimated Detection Limit |
| ITEF | International Toxicity Equivalence Factor |
| LCS | Laboratory Control Sample |
| MB | Method Blank |
| MB % Rec | % Recovery of Surrogate in Method Blank, if applicable |
| MDL | Method Detection Limit |
| ML | Minimum Level of Quantitation |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| N/A | Not Applicable |
| ND | Not detected at or above the indicated MDL or RL |
| NR | Data Not Reported due to matrix interference or insufficient sample amount. |
| PDS | Post Digestion Spike |
| PDSD | Post Digestion Spike Duplicate |
| PF | Prep Factor |
| RD | Relative Difference |
| RL | Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.) |
| RPD | Relative Percent Deviation |
| RRT | Relative Retention Time |
| SPK Val | Spike Value |
| SPKRef Val | Spike Reference Value |
| SPLP | Synthetic Precipitation Leachate Procedure |
| ST | Sorbent Tube |
| TCLP | Toxicity Characteristic Leachate Procedure |
| TEQ | Toxicity Equivalents |
| WET (STLC) | Waste Extraction Test (Soluble Threshold Limit Concentration) |

Analytical Qualifiers

| | |
|----|--|
| b1 | aqueous sample that contains greater than ~1 vol. % sediment |
| e4 | gasoline range compounds are significant. |

Prepared by: Alexandra Iniguez

The following SampIDs: 001B, 002B, 003B, 004B, 005B, 006B, 007B contain testgroup Gas8260_W.

Comments:

NOTE: Soil samples are discarded 60 days after results are reported unless other arrangements are made (Water samples are 30 days).
Hazardous samples will be returned to client or disposed of at client expense.

WORK ORDER SUMMARY

Client Name: AEI CONSULTANTS

Project: Kia/338841

Work Order: 1611D25

Client Contact: Wayne Hung

QC Level: LEVEL 2

Contact's Email: whung@aeiconsultants.com

Comments:

Date Logged: 11/30/2016

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

| <small>MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.</small> | | | | | | | | | | | | | | | | | | |
| <small>* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.</small> | | | | | | | | | | | | | | | Comments / Instructions | | | |
| <small>Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.</small> | | | | | | | | | | | | | | | | | | |

WorkOrder No: **1611D25** Received by: **Alexandra Iniguez**
Carrier: **Client Drop-In** Logged by: **Alexandra Iniguez**

Chain of Custody (COC) Information

Chain of custody present? Yes No
Chain of custody signed when relinquished and received? Yes No
Chain of custody agrees with sample labels? Yes No
Sample IDs noted by Client on COC? Yes No
Date and Time of collection noted by Client on COC? Yes No
Sampler's name noted on COC? Yes No

Sample Receipt Information

Custody seals intact on shipping container/cooler? Yes No NA
Shipping container/cooler in good condition? Yes No
Samples in proper containers/bottles? Yes No
Sample containers intact? Yes No
Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes No NA
Sample/Temp Blank temperature Temp: 3.4°C NA
Water - VOA vials have zero headspace / no bubbles? Yes No NA
Sample labels checked for correct preservation? Yes No
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)? Yes No NA
Samples Received on Ice? Yes No
(Ice Type: WET ICE)

UCMR3 Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522? Yes No NA
Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539? Yes No NA
