APPENDIX B	PREVIOUS REPORTS

the excavation. An additional 100 cubic yards of soil was removed until no further odor or staining was apparent. Soil samples were then taken from the southeast end of the excavation and newly stockpiled soil. Laboratory analyses of the soil samples indicated that the contaminated soil was successfully overexcavated. Refer to Appendix B: Previous Reports for further details. AEI was then contracted to perform a soil and groundwater investigation at the request of ACHCSA.

In March, 1994, three monitoring wells were installed. The wells were developed and have been sampled four times thus far, from November, 1994 through August, 1995. Groundwater samples were analyzed by Priority Environmental Labs (State Certification #1708) in Milpitas, California. Samples from all three wells were analyzed for TPH-g, Total Petroleum Hydrocarbons as diesel (TPH-d), TOG, and Benzene, Toluene, Ethylbenzene, Xylenes (BTEX). Sample analyses indicated moderate levels of TPH-g and elevated levels of BTEX in all wells, with maximum concentrations showing 11,000 ppb (parts per billion) TPH-g; and 25 ppb, 6.2 ppb, 22 ppb, 30 ppb of BTEX, respectively. TPH-d and TOG were below the MDL in samples from the three wells.

A letter dated August, 21, 1995 from Jennifer Eberle, Hazardous Materials Specialist, at ACHCSA requested the collection of two samples, from below each end of the former dispenser pump island (See Figure 2: Site Map). The request was made because samples were not originally collected below the former dispenser pump island.

4.0 SITE GEOLOGY

According to the Quaternary Geologic Map of the San Francisco Bay Area 4° x 6° Quadrangle, United States (US Geological Survey, 1993), the general near surface Quaternary geology (alluvial fan, gravely sand) of the area consists of early Pleistocene alluvium deposits of weakly to moderately consolidated, slightly to deeply weathered, gravely sand with interbedded silt and clay. The earth materials are deposited as alluvial fans with thicknesses of 100-200 meters.

Native material around the tank consisted primarily of a gray-blue stiff clay with some silt to a depth of 18 feet. Greenish soil was encountered from 9 to 18 feet below grade. Based on hand-augered soil borings advanced at the site, the subsurface materials consist mostly of silty and sandy clays of relatively low permeability, with discontinuous layers of silty sand, up to 4 feet thick.

The direction of the groundwater flow, based on groundwater measurements, is toward the southeast. The groundwater flow direction has remained essentially the same in all quarterly groundwater episodes. Groundwater was not encountered in the hand augered soil borings.

5.0 SOIL SAMPLING AND ANALYSES

AEI advanced two hand-augered borings in the parking lot area of the property located at 3635 13th Avenue in Oakland, California on November 16, 1995. Asphalt was cored through in two locations.

One soil boring (W) was advanced at the west end of the fuel pump island to 4.5 feet below ground surface (bgs) when the hand-auger hit refusal. The second soil boring (E) was advanced at the east end of the fuel pump island. Soil samples from soil boring E were taken at depths of 5 feet and 10 feet below surface grade (See Figure 2, Site Plan). All soil samples were transported to a State Certified Laboratory, Priority Environmental Labs (#1708) of Milpitas, California, and analyzed for the fuel-related compounds noted in the tables below:

SAMPLE NUMBER	TPH-g (mg/Kg)	BENZENE (ug/Kg)	TOLUENE (ug/Kg)	ETHYL-BENZENE (ug/Kg)	XYLENES (ug/Kg)
W (4.5')	ND	ND	ND	ND	ND
E (5')	ND	ND	ND	ND	ND
E (10')	ND	ND	ND	ND	ND

TPH-g Total Petroleum Hydrocarbons as gasoline
 BTEX Benzene, Toluene, Ethylbenzene, and Xylenes
 ND Not detected at or above the Method Detection Limit
 mg/Kg Milligrams per kilogram; parts per million
 ug/Kg Micrograms per kilogram; parts per billion
 --- Sample not analyzed

6.0 CONCLUSIONS AND RECOMMENDATIONS

On November 16, 1995, two hand-augered borings were advanced at the site located at 3635 13th Avenue in Oakland, California. Only one soil sample was obtained from boring W at 4.5 feet bgs due to auger refusal, and two soil samples were obtained from soil boring E at 5 and 10 feet bgs, respectively. All soil samples were analyzed for fuel-related compounds in order to establish base contaminant levels and to determine if past site activities have impacted the environmental quality of the soil below the site. This limited soil investigation was requested in a letter dated August 21, 1995 by Jennifer Eberle at the ACHCSA.

The samples from borings W and E indicated non-detect levels of Total Petroleum Hydrocarbon as gasoline (TPH-g) and BTEX.

It is not apparent from our investigation that residual petroleum hydrocarbons remain in soil below the former pump island.

7.0 REPORT LIMITATIONS

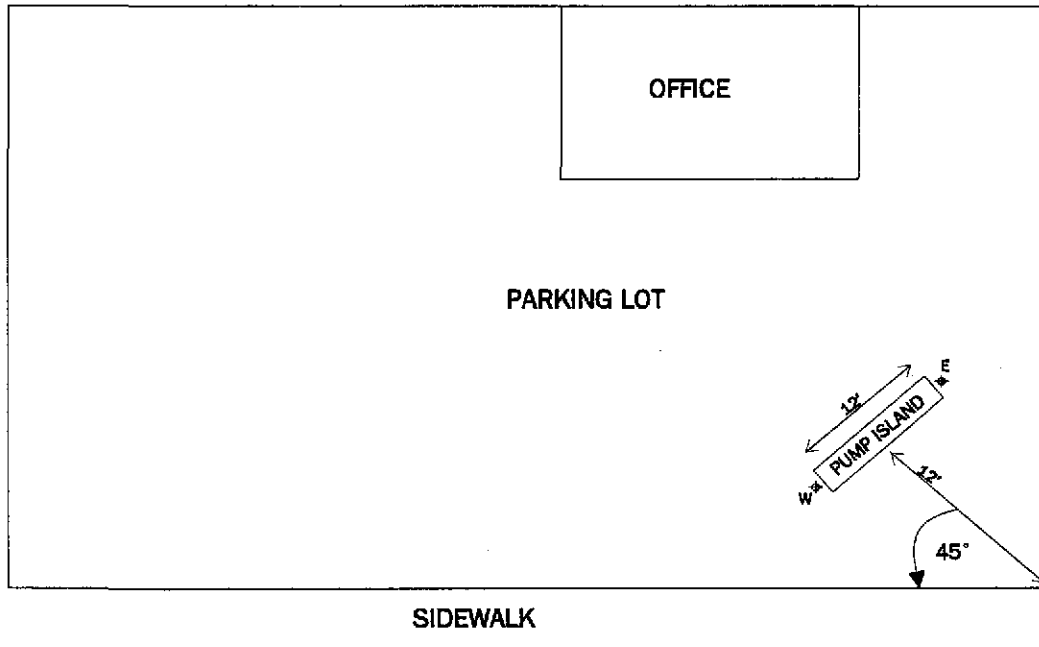

This report presents a summary of work completed by All Environmental, Inc., including observations and descriptions of site conditions. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide required information, but it cannot be assumed that they are entirely representative of all areas not sampled. All conclusions and recommendations are based on these analyses, observations, and governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document.

AEI warrants that all services were performed in accordance with the generally accepted practices in the environmental engineering and construction field which existed at the time and location of the work.

1.0 INTRODUCTION

All Environmental Inc. (AEI) has prepared this final report to document the building demolition, hydraulic lift removal and contaminated soil over-excavation performed at 3635 13th Avenue in Oakland, California (Figure 1: Site Location Map and Figure 2: Site Map). A 1,000-gallon gasoline tank, a 500-gallon gasoline tank, and a 250-gallon waste oil tank were removed from the site by Aqua Science Engineers on December 15, 1992. The waste oil tank was reported as being heavily pitted and having numerous holes.

At the time of tank removal, soil samples taken from the tank excavation showed the waste oil tank to be the primary concern at this site. Laboratory analyses indicated concentrations of oil & grease to be 8,200 parts per million (ppm), with 290 ppm TPH-gasoline, and 255 ppm lead. Concentrations of gasoline greater than 100 ppm are considered "Actionable" levels by the Tri-Regional Board Guidelines. All Environmental, Inc. was retained by the property owner to perform contracting and consulting services to overexcavate the contaminated soil, remove and dispose of two hydraulic lifts from inside the repair shop, backfill the excavation, and dispose of the contaminated soil at a Class III Landfill.

2.0 PERMITS AND NOTIFICATIONS

An Underground Storage Tank Unauthorized Release / Contamination Site Report was filed with the Alameda County Health Care Services Agency (ACHCSA) in response to the ACHCSA request dated June 22, 1993. Cal OSHA and the Bay Area Air Quality Management District were notified by fax of the over-excavation and building demolition activities five days prior to the project initiation date. A building permit was obtained from the City of Oakland Development Services Department on September 10, 1993 for demolition activities on the site. Copies of the notification documents and building permit are contained in Appendix A.

3.0 SITE DEMOLITION

As the tank removal report dated January 20, 1993 detailed, the area of the waste oil tank had significant soil contamination. In response to ACHCSA recommendations for further soil excavation, AEI found the most efficient, cost-effective method would require the removal and disposal of office and shop building materials, concrete slabs, and associated ground cover. Site demolition was initiated on September 13, 1993.

4.0 EXCAVATION OF CONTAMINATED SOIL AND REMOVAL OF HYDRAULIC LIFTS

All Environmental mobilized on site for overexcavation on September 13, 1993. Project personnel included Steve Penshorn - Project Engineer, Steve DeHope - Construction Superintendent and Dusty Roy - Hazardous Technician.

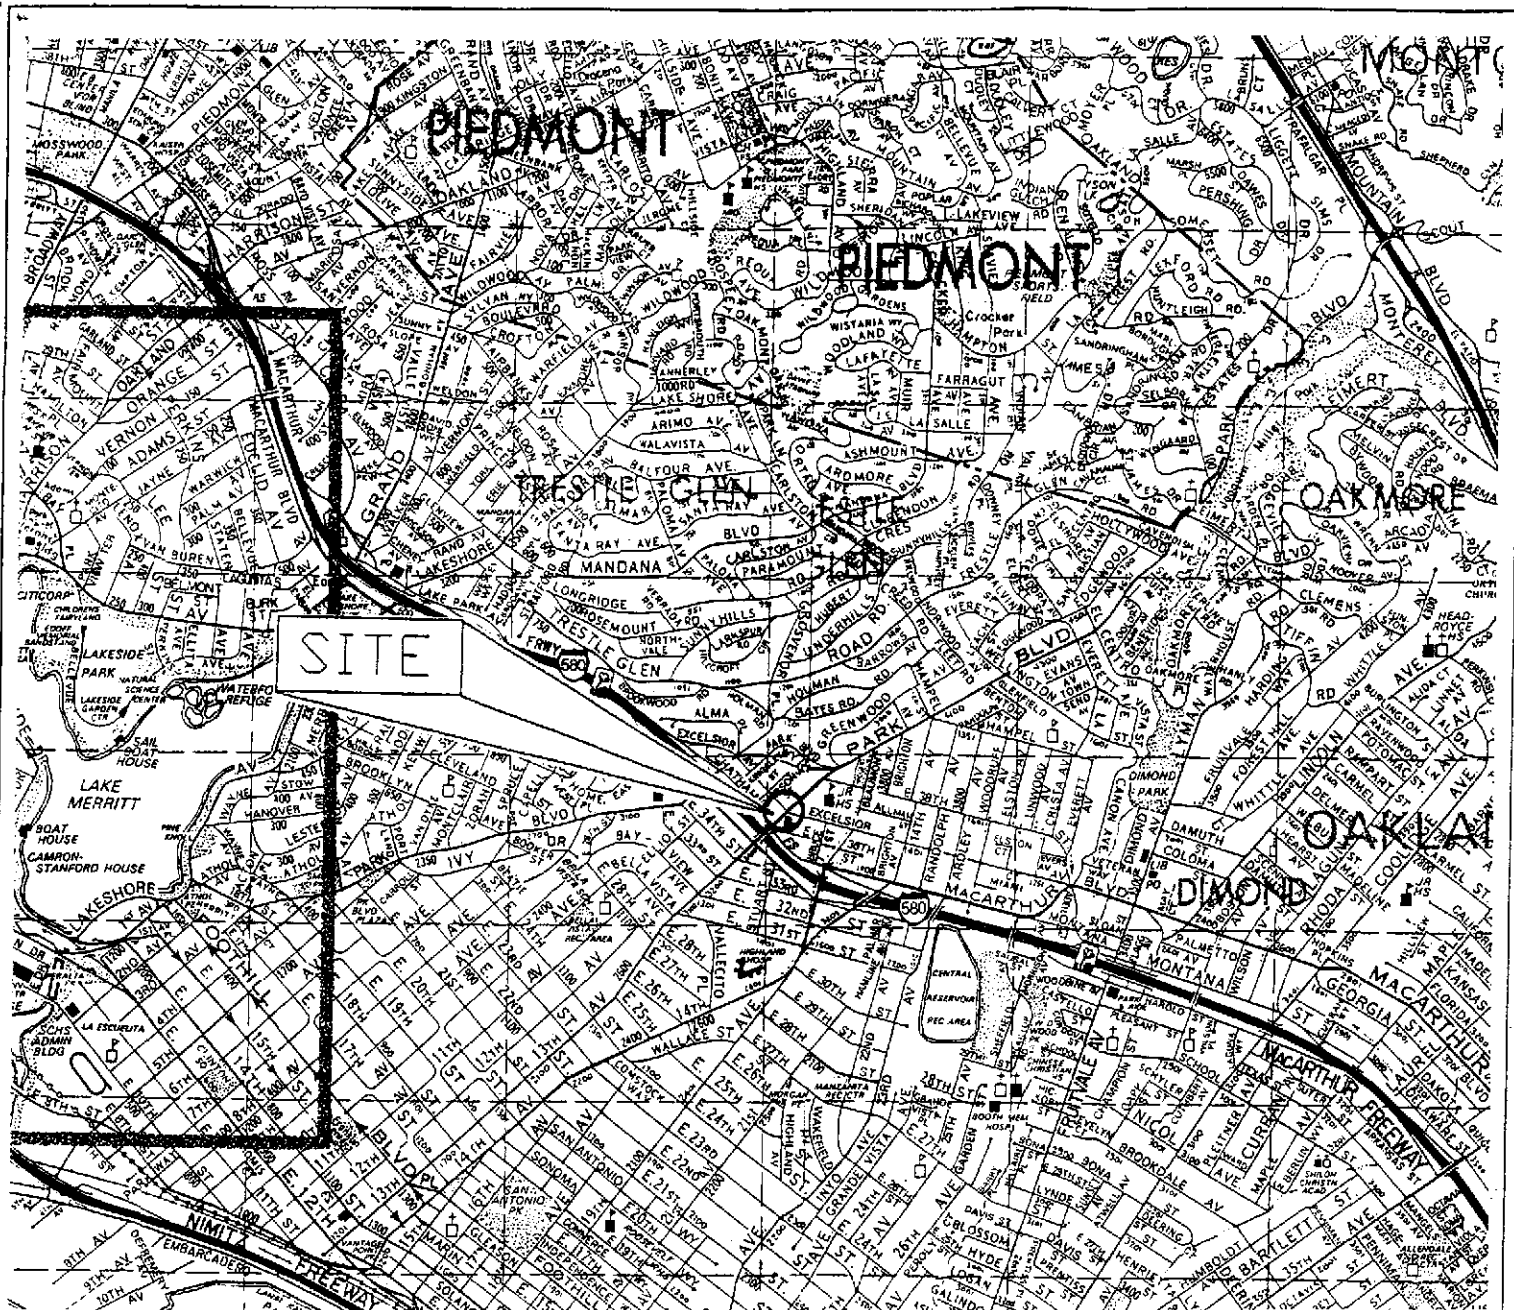

All Environmental excavated approximately 360 total cubic yards of soil to complete the project. Approximately 260 cubic yards of contaminated soil was removed prior to the initial sampling of the excavation bottom and sidewalls. Results from the sample analysis indicated that further soil removal would be required on the southeast end of the excavation. An additional 100 cubic yards of soil was removed until no further odor or stained soil was apparent. Soil samples were then taken from the southeast end of the excavation and newly stockpiled soil. Laboratory analyses of these soil samples confirmed that the contaminated soil was successfully over-excavated.

Native material around the tank consisted primarily of a gray-blue stiff clay with some silt to a depth of 18 feet. Greenish soil was encountered from 9' to 18' depth below grade. There

was a mild odor of aged gasoline and a noticeable amount of staining within the soil that was excavated. There was a small amount of water in the bottom of the pit at 18' below ground surface.

5.0 SAMPLING AND ANALYSES

On September 13 & 14, samples of the excavation sidewalls (SWN, SWS, SWE, SWW), one sample along the bottom of the excavation (EB-19), and one sample from under each of the hydraulic lifts (HLN, HLS) were taken. Each (4) stockpile of excavated soil was sampled by taking four different soil samples at different depths and locations within the stockpile and compositing these four samples at the laboratory (STKP 1-4, STKP 5-8, STKP 9-12 & STKP 13-16). Analytical results are tabulated on the following page (Table I: Initial Soil Sample Results) and a copy from the laboratory is enclosed in Appendix C. Figure 3 shows the initial sample locations. Following the continued overexcavation of the southeast wall, one soil sample was taken from the sidewall (EW-12) and two composite samples were taken from the stockpiled soil (STKP 1-4 & STKP 5-8). Analytical results from these samples can be found in Table II: Southeast Wall Overexcavation Sample Results and a copy from the laboratory is enclosed in appendix C. Figure 4 shows the final sample locations.

---- = Not Analyzed For

* Compositated soil samples

Soil samples were collected by driving a 6-inch by 2-inch stainless steel tube into the soil using a wooden mallet. The samples of stockpiled material were taken as a composite of four sub-samples. The four samples were compositated as one sample at the laboratory. All soil samples were secured using aluminum foil, teflon caps and sealed with duct tape, then put on ice and transported back to the office where they were placed in cold storage until the laboratory picked up the samples. All samples were transported under chain of custody procedures to Priority Environmental Labs in Milpitas, California.

6.0 CONTAMINATED SOIL DISPOSAL

The stockpile of contaminated soil was profiled for disposal into the Vasco Road Landfill in Livermore, California. The landfill required an STLC CAM 17 metals analysis for the stockpiled soil prior to acceptance for disposal. Results of this analysis yielded acceptable levels of the 17 metals tested for. STLC CAM 17 soil analysis results can be found in Appendix C. The 360 yards of contaminated soil was loaded onto a truck and transported

under a Non-Hazardous Waste Manifest to the Vasco Road Landfill on November 9, 1993. Copies of the Non-Hazardous Waste Manifests can be found in Appendix D.

7.0 BACKFILLING AND RESURFACING

The excavation was backfilled with 440.75 tons of clean import fill that was placed in one foot lifts and compacted to approximately 90% compaction to prevent long term settling. The site was not resurfaced at the request of the property owner.

8.0 DISCUSSION AND CONCLUSIONS

All Environmental, Inc. provided demolition services for the removal of the office, shop building materials and concrete slab. Two hydraulic lifts were removed, transported and disposed of at an appropriate licensed facility and as per ACHCSA request, soil samples were collected and analyzed from each of former lift areas. Sample results from the north hydraulic lift area yielded non-detectable concentrations of TPH-hydraulic fluid in the soil, while soil sample results from the south hydraulic lift area showed 270 ppm of TPH-hydraulic fluid. 260 cubic yards of contaminated soil was subsequently excavated from around the south hydraulic lift area and the former waste oil tank pit. The soil was removed and properly disposed of at Vasco Road Landfill in Livermore. Soil sampling following the overexcavation showed that further overexcavation was necessary.

According to the guidelines issued by the California Regional Water Quality Control Board (RWQCB) the presence of 100 ppm or more of total petroleum hydrocarbons (TPH) in the soil indicates a confirmed fuel release and are considered "Actionable" levels. Removal and disposal or in-situ remediation is generally required for soils containing greater than 1,000

ppm TPH. Decisions regarding remediation of soil containing between 100 and 1,000 ppm TPH are made on a case-by-case basis, but remediation is commonly recommended for hydrocarbon contamination of over 100 ppm. The maximum concentrations encountered following the initial overexcavation were 400 ppm TPH as gasoline, 1,000 parts per billion (ppb) of benzene, 1,500 ppb of toluene, 1,600 ppb of ethyl benzene, 5,100 ppb of total xylenes and 2,100 ppm of oil and grease.

Following the results of the initial overexcavation sample analysis, an additional 100 cubic yards of soil was overexcavated along the southeast wall. Further soil sampling yielded non-detectable levels of contamination within the excavation. However, a small amount of water was encountered on the bottom of the pit at 18' below ground surface.

Laboratory analyses, of all the soil samples taken, indicate that soil remediation has been completed. To determine whether petroleum hydrocarbons have impacted groundwater beneath the site, AEI recommends that three monitoring wells be placed on the site in a triangulated configuration with one monitoring well located within 10 feet of the excavation in the downgradient position.

9.0 REPORT LIMITATIONS

This report presents a summary of work completed by All Environmental, Inc., including observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide required information, but it cannot be assumed that they are representative of areas not sampled. All conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document.

All Environmental, Inc. warrants that all services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work.

BUILDING PERMIT APPLICATION

THIS IS YOUR PERMIT WHEN PROPERLY FILLED OUT, SIGNED, VALIDATED & FEES PAID.

OWNER	BUILDING ADDRESS	3635 13 TH STREET AVE		
	TRACT	BLOCK PAGE	LOT PARCEL	
OWNER	NAME	John Williamson		
	ADDRESS	1511 WASHINGTON ST N/A		
	CITY	STATE	ZIP	94602
	TENANT'S NAME AND TELEPHONE NUMBER (IF APPLICABLE)			
ARCH. ENGR.	NAME	LICENSE # 1		
	ADDRESS	PHONE		
	CITY	STATE	ZIP	
CONTRACTOR	I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.			
	LICENSE # AND CLASS	654919/A+H&M CITY BUSINESS		
	CONTRACTOR NAME	All Environmental Inc		
	ADDRESS	2641 CROW CANYON RD #5		
	CITY	STATE	ZIP	PHONE
OWNER/BUILDER	SIGNATURE: <u>Dustin Roy</u> DATE: <u>7/10/93</u>			
	I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law Chapter 9 (commencing with Sec. 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than \$500):			
	<input type="checkbox"/> I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business Professions Code; The Contractor's License Law does not apply to an Owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale).			
	<input type="checkbox"/> I, as owner of the property, am exempt from the sale requirements of the above due to: (1) I am improving my principal place of residence or dependences thereon, (2) the work will be performed prior to sale, (3) I have resided in the residence for the 12 months prior to completion of the work, and (4) I have not claimed exemption in this subdivision on more than two structures more than once during any three-year period. (Sec. 7044, Business and Professions Code).			
	<input type="checkbox"/> I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code; The Contractor's License Law does not apply to an owner of property who hires or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law).			
	<input type="checkbox"/> I am exempt under Sec. _____ & P.C. for this reason _____			
	Signature of Owner or Authorized Agent		DATE	
	I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Permit Application and Job Notification Form

Construction Demolition Trenches Excavation Buildings Structures Falsework Scaffolding

State of California
 Department of Industrial Relations
 Division of Occupational Safety & Health

Concord District Office
 Date: ___/___/___
 PERMIT No. _____

Sections 8500, 8501 and 8502 of the California Labor Code require that certain activities which by their nature involve substantial risk of injury may not be performed without a permit issued by DOSH. The Labor Code requires that the applicant supply, and that the Division review,

information necessary to evaluate the safety of the worksite subject to permit requirements. A permit will not be issued until evidence has been demonstrated that the place of employment will be safe and healthful.

Applicant refers to the employer applying for the Permit

Employer: All Environmental, Inc.
 Address: 2641 Crow Canyon Rd. #5
San Ramon CA 94583
 Phone: 510-820-3224

Project Safety Contact: Dustin Roy
 Employer's Representative: Steve DeHoe
 Title & Phone No: Const. Supt. 510-820-3224
 Employer's State Contractor's License No. 654919

Check Applicable Items:

Applicant refers to a knowledgeable person in a position of authority and responsibility for the activity to be covered by this permit.

Applicant is:

- General Building Contractor
 General Engineering Contractor
 Specialty Contractor
 Specialty Contractor Type: HAZ
 Other: _____

General Contractor Option
 Initial this blank if applicant elects to assume responsibility for obtaining a single permit to cover one multi-employer project, e.g., a high-rise construction project. The duties of employers at the site to obey safety and health laws are not changed by this section. A list of employers on site will be attached by the Division to this application and the list will be updated as necessary.

Type of Permit Sought:

- Annual
 Single Project
 Job Start Notification Only
 Provisional Permit [PLAN CHECK ONLY]

Multiple Project. (If Projects to be covered are similar in all important aspects; work is performed by the same employer; and information concerning each project covered is provided.)

For:

- Construction of: Building Structure
 Demolition of: Building Structure
 Scaffolding and/or Falsework and/or Vertical Shoring
 Tower Crane Erection
 Trench and/or Excavation

Underground Services Alert # 273031
 (DIGALERT 1-800-642-2444) Northern CA
 (DIGALERT 1-800-422-4133) Southern CA

Any permit based on this application is issued with the understanding that the applicant has knowledge of occupational safety and health orders applicable to the project(s) described in this application and attachments, and that the applicant and supervising personnel will take special care to insure compliance with safety orders reviewed with the applicant by the Division in the application process.

4) The applicant understands that under the permit program, DOSH schedules routine inspections by authorized personnel for the purpose of verifying that holders of permits are meeting their obligation to provide a safe work place for their employees. The Division reserves the right to revoke a permit if it is unable to promptly verify compliance with the terms and conditions of the permit and its issuance.

Issuance of the permit is also conditional upon the following:

- Upon initiation of any new project not described in this application, the holder of an annual permit will provide the Division with a completed Project Description Form describing the new project prior to the start of work, preferably at least one week in advance of start-up date. A phone call may be used to meet the deadline but will not be considered valid notice unless followed in writing by mailing a completed Project Description Form.
- The applicant has implemented a written accident prevention program and Code of Safe Practices which meet the requirements of 8 California Administrative Code, 1509.
- The Division will be notified of significant changes in information provided with this application if such changes might affect the safety of the activity.

5) The applicant understands that failure to comply with any of the above listed conditions for obtaining a permit could result in denial, suspension or revocation of the permit. Employers may appeal these actions to the Director of the Department of Industrial Relations (California Labor Code, Section 8500 et. seq., and 8 California Administrative Code, Section 341).

Is the applicant conducting any activities to be covered by this permit application in partnership or joint venture with any other persons or corporations conducting activities requiring permits? Yes No
 If "yes" give details: _____

Have any permits for any project to be covered by the permit application previously been applied for or obtained? Yes No If "yes," when Aug. 93 from what district office Oakland Pub. Works in whose name All Env. Inc.

APPENDIX D
HEALTH AND SAFETY PLAN

ALL ENVIRONMENTAL, INC.

Environmental Engineering & Construction

2641 Crow Canyon Rd., Ste. 5 • San Ramon, CA 94583 • (510) 820-3224

HEALTH AND SAFETY PLAN

Prepared for:

3635 13th Ave. jobsite
Oakland, CA

Prepared for:

Mr. John Williamson
1511 Wellington St.
Oakland, Ca. 94602

prepared by:

ALL ENVIRONMENTAL, INC.
2641 Crow Canyon Rd., Suite 5
San Ramon, Ca. 94583

FAX: (510) 838-2687

5. Lead

- a. A heavy ductile soft grey metal.
- b. Exposure may cause weakness, nausea, lassitude, diarrhea, insomnia, anorexia, inflamed mucous membranes and abdominal pains. Lead is a known carcinogen.
- c. Permissible exposure level for a time weighted average over an eight hour period is .05 ppb.

Other on site hazards will be those associated with powered heavy equipment, rigging and moving of large, heavy objects, and falling into an excavation. Heavy equipment used for performing the building demo and soil excavation project may include a backhoe, an excavator, or a crane. Only 40 hour trained personnel will operate equipment or perform any duty associated with this project. A hard hat and steel toed boots are mandatory for all personnel associated with on site project activity. The excavation will be properly sloped for stability, safety, and personnel entry if needed. The site will inspected on a daily basis for safety and potential cave-ins.

The proximity of adjacent residences and other structures will require particular care during the demolition phase of the project. Underground and overhead lines or piping must be considered live or in use unless known otherwise.

Dusty Roy has been designated to coordinate access control and security on site. All work will strictly follow OSHA guidelines. Personnel shall maintain the maximum distance from the pit and equipment while performing their duties. No one shall enter an excavation that is greater than five feet in depth and no one shall climb on the stockpiled material.

A FIRST AID KIT AND AT A 40 POUND BC FIRE EXTINGUISHER WILL BE AVAILABLE ON SITE. THE SUPERINTENDENT'S VEHICLE IS THE DESIGNATED COMMAND POST IN CASE OF EMERGENCY.

EMERGENCY SERVICES ARE AVAILABLE BY DIALING 911 ON THE TELEPHONE LOCATED IN THE SUPERINTENDENT'S VEHICLE. THIS VEHICLE WILL BE ON SITE AT ALL TIMES.

E. PERSONAL PROTECTIVE CLOTHING

Based on evaluation of potential hazards, level 'D' protective clothing has been designated as the appropriate protection for this project. The level of protective clothing will be upgraded if the organic vapor levels in the operator's breathing zone exceeds 5 ppm above background levels continuously for more than five minutes. If this occurs then level C protection will be used. If the organic concentration in the operator's breathing zone exceed's 200 ppm for 5 minutes and/or the organic vapor concentration two feet above the excavation exceeds 2,000 ppm or

25% of the lower explosive limit, then the equipment will be shut down and the site evacuated. If organic vapor concentrations exceed 200 ppm and work continues then level A or B protection will be required.

"EPA Standard Operating Safety Guidelines" defines the levels of protective clothing as follows:

LEVEL A:

Fully encapsulating suit / SCBA / Hard hat / Steel toe boots / Safety gloves.

LEVEL B:

Splash resistant suit / SCBA / Hard Hat / Steel toe boots / Safety gloves.

LEVEL C:

Half face respirator / Hard hat / Safety glasses / Steel toe boots
Coveralls / Gloves.

LEVEL D:

Coveralls / Hard hat / Safety Glasses / Steel toe boots / Gloves.

If air purifying respirators are authorized, Organic vapor/ w-filter is the appropriate canister for use with the involved substances and concentrations. A competent individual has determined that all criteria for using this type of respiratory protection have been met.

NO CHANGES TO THE SPECIFIED LEVELS OF PROTECTION SHALL BE MADE WITHOUT THE APPROVAL OF THE SITE SAFETY OFFICER.

F. MONITORING INSTRUMENTS

An environmental monitoring instrument shall be used on site at specified intervals. The GasTech instrument will measure organic vapors in the breathing spaces.

G. EMERGENCY HOSPITAL

The hospital selected for a medical emergency is:

HIGHLAND HOSPITAL, EMERGENCY ROOM - (510) 437-4557
1411 E. 31ST ST., OAKLAND
