Subject: *Interim Corrective Action Plan and Enhanced Groundwater Recovery Results  
Third Quarter 2001 through Second Quarter 2002*  
Former Chevron Service Station No. 9-7127  
I-580 and Grant Line Road  
Tracy, California  
Delta Project No. DG97-127

Dear Ms. Chu:

Delta Environmental Consultants, Inc. (Delta) has been authorized by Chevron Products Company (Chevron) to conduct monthly groundwater over-purge events at the above site. The over-purge events were conducted as part of Delta's *Interim Corrective Action Plan* (ICAP), dated May 7, 2001. The location of the site is shown on Figure 1 and the site features are illustrated on Figure 2. This report presents the enhanced groundwater recovery activities conducted at the site during the period of July 2001 through April 2002. Additionally, this report addresses the Alameda County Health Care Services (ACHCS) letter dated February 7, 2002, requesting a workplan for active remediation at the site. The ACHCS letter is included in Enclosure A.

#### Installation of Passive Skimmer

? <sup>2001</sup> On July 17, 2002, a passive Hydro-Skimmer™ was installed in MW-1. The collection capacity of the skimmer is approximately 2.20 gallons.

#### Volume of Separate Phase Hydrocarbons (SPH) and Groundwater Removed

Approximately 2.19 gallons of SPH were recovered from monitoring well MW-1 during the period of July 2001 through April 2002. Approximately 8,300 gallons of groundwater were over-purged from monitoring wells MW-1 and MW-3 during the period of July 2001 through April 2002. Cumulative volumes of SPH and groundwater removed from the site during the skimmer maintenance and over-purge events are compiled in Table 1. Over purging field work was conducted in accordance with field methods and procedures presented in Enclosure B.

#### Groundwater Monitoring and Sampling

Gettler-Ryan Inc. conducted a groundwater monitoring and sampling event at the site on November 16, 2001. Groundwater elevations were measured in monitoring wells MW-1 through MW-8 and the water supply well. In addition, the wells were checked for the presence of SPH before sampling each well. During the November monitoring event groundwater samples were collected from monitoring wells MW-3, MW-4, MW-6, and the water supply well. Cumulative groundwater monitoring data and analytical results are presented in Enclosure C.

Ms. Eva Chu  
Alameda County Health Care Services  
June 24, 2002  
Page 2  
**Summary**

Based on groundwater monitoring data for MW-1, during the period of July 2001 through April 2002, it appears that hand bailing activities have been effective in removing SPH.

Delta has evaluated the effectiveness of overpurging groundwater from MW-1 to remove petroleum hydrocarbons from groundwater in the vicinity of MW-1. Based on our evaluation, we have concluded that overpurging has not been an effective remediation alternative to decrease petroleum hydrocarbon concentrations in groundwater beneath the site. As a result, we are requesting the following changes to the Interim Corrective Action Plan.

1. Discontinue overpurging groundwater from MW-1 and MW-3.
2. Reduce hand bailing of SPH from MW-1 and skimmer maintenance to one event per quarter.
3. Submit semi-annual reports of mass removal to ACHCS.
4. Conduct a feasibility study to assess soil and groundwater remediation alternatives not previously considered and submit a work plan and implementation schedule of approved alternatives within 90 Days of the date of this letter, or by August 31, 2002.

**Remarks/Signatures**

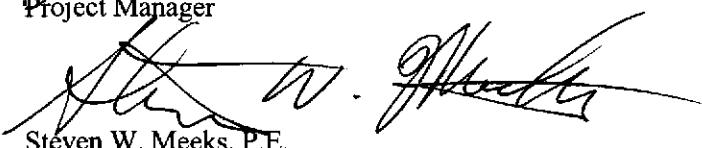

The interpretations contained in this report represent our professional opinions, and are based in part, on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

If you have questions or comments regarding this report, please contact me at (916) 536-2623.

Sincerely,  
**DELTA ENVIRONMENTAL CONSULTANTS, INC.**

**RE: RAP for Former Chevron 9-7127 at I-580 and Grant Line Rd, Tracy, CA**

Dear Messrs. Bauhs and Onsori:

I have completed review of Gettler-Ryan's December 2001 *Groundwater Monitoring Sampling Report* prepared for the above referenced site. Onsite monitoring wells were sampled in November 2001. Well MW-1 contained separate phase hydrocarbon and Well MW-3 contained 100,000ppb TPHg and 23,000ppb benzene. A review of historic groundwater data reveals that hydrocarbon concentrations in Well MW-3 are increasing. This suggests that the plume is slowly migrating from the source area (former tank pit) to beyond well MW-3.

Although past investigations completed to date suggest that the plume does not pose a risk to human health and is not likely to impact the lower aquifer (at greater than 300 feet bgs), active remediation is now required to minimize the spread of contamination into previously uncontaminated zones. The prior use of ORC and hydrogen peroxide does not appear to help biodegrade hydrocarbons at the site. At this time, a workplan for the remediation of elevated hydrocarbons in groundwater using another technology is required. The workplan is due within 90 days of the date of this letter, or by May 13, 2001.

If you have any questions, I can be reached at (510) 567-6762.

eva chu

## **FIELD METHODS AND PROCEDURES**

The following describes field procedures that were completed by Delta personnel in the performance of the tasks involved with this project.

### **1.0 GROUNDWATER DEPTH ASSESSMENT**

Depth to groundwater was measured to the nearest 0.01 foot using an electronic hand held water level indicator. The tip of the probe was examined to assess whether liquid-phase petroleum hydrocarbons or hydrocarbon sheen was present. The depth to groundwater was measured from a marked reference point at the top of each well riser. Each reference point has been surveyed relative to a mean sea level or temporary benchmark for correlation of groundwater levels at the site.

### **2.0 RECOVERY OF SEPARATE PHASE HYDROCARBONS(SPH)**

The Hydro-Skimmer™ is removed from the well casing using the safety cord attached to the well cap. The unit is held upright over a recommended collection container and the valve is opened at the base, allowing the SPH to drain into the container. Once the Hydro-Skimmer™ has been drained, the valve is closed and the unit is reinserted into the well.

The SPH recovered from the Hydro-Skimmer™ is poured from the collection container into a graduated flask and the measurement is recorded in a journal.

### **3.0 MONITORING WELL PURGING AND SAMPLING**

Groundwater is purged from the wells by connecting a manifold vacuum hose, slip-cap and drop tube assembly to the wellhead. Once the assembly was connected, approximately 15 inches of mercury vacuum was applied to the wellhead for enhanced fluid recovery. After the water levels within the wells were allowed to stabilize, a sample was collected with a dedicated, clean, disposable plastic bailer. Samples were sealed in air tight vials, packed on ice, and transported to a California-certified laboratory to be analyzed within the EPA-specified holding time for requested analyses.

### **4.0 GROUNDWATER SAMPLE COLLECTION**

Each sample container submitted for analysis had a label affixed to identify the job number, sample date, time of sample collection, and a sample number unique to that sample. This information, in addition to a description of the sample, field measurements made, sampling methodology, names of on-site personnel, and any other pertinent field observations, were recorded on sampling information sheets.

A chain-of-custody form was used to record possession of the sample from the time of collection to its arrival at the laboratory. When the samples were shipped, the person in custody of them relinquished the samples by signing the chain-of-custody form and noting the time. The sample control officer at the laboratory verified sample integrity and confirmed that it was collected in the proper container, preserved correctly, and that there was an adequate volume for analysis. The laboratory then assigns each sample with a unique identification number that will designate a given sample until it is properly destroyed.

---

**EXPLANATIONS:**

Groundwater monitoring data and laboratory analytical results prior to May 23, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.

TOC = Top of Casing

(ft.) = Feet

GWE = Groundwater Elevation

(msl) = Mean sea level

DTW = Depth to Water

SPHT = Separate Phase Hydrocarbon Thickness

SPH = Separate Phase Hydrocarbons

TPH-G = Total Petroleum Hydrocarbons as Gasoline

B = Benzene

T = Toluene

E = Ethylbenzene

X = Xylenes

MTBE = Methyl tertiary butyl ether

-- = Not Measured/Not Analyzed

(ppb) = Parts per billion

QA = Quality Assurance

\* TOC elevations are relative to msl.

\*\* GWE has been corrected for the presence of SPH, correction factor = [(TOC - DTW) + (SPHT x 0.80)].

1 ORC present in well.

2 ORC Installed.

3 Confirmation run.

4 Due to the presence of Separate Phase Hydrocarbons results for EPA 8015/8020 do not represent true values for TPH-Gasoline, BTEX, or MTBE.

The results were reported respectively as 24,000, 140, 830, 210,1500 and <0.05 mg/Kg.

5 Estimated Groundwater Elevation.

6 Well was not sampled due to damaged casing and debris in well. Ground water elevation is an estimate.

7 Laboratory report indicates gasoline C6-C12.

8 Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons <C6.

9 Laboratory report indicates result exceeds the linear range of calibration.

10 Laboratory report indicates gasoline.

11 Laboratory report indicates the results for this hydrocarbon is elevated due to the presence of single analyte peak(s) in the quantitation range.

12 Chromatogram pattern indicates an unidentified hydrocarbon.

13 Product + Water.

14 MTBE by EPA Method 8260 was analyzed outside the EPA recommended holding time.

15 Skimmer in well.

16 ORC not present in well.

**Table 2**  
**Groundwater Analytical Results - Oxygenate Compounds**  
Former Chevron Service Station #9-7127  
I-580 and Grant Line Road  
Tracy, California

WELL ID	DATE	TBA (ppb)	MTBE (ppb)	DIPE (ppb)	ETBE (ppb)	TAME (ppb)
MW-3	05/18/01 <sup>1</sup>	1,000	11	<10	<10	<10
MW-4	05/18/01 <sup>1</sup>	200	2.1	<2.0	<2.0	<2.0

**EXPLANATIONS:**

TBA = Tertiary butyl alcohol

MTBE = Methyl tertiary butyl ether

DIPE = Di-isopropyl ether

ETBE = Ethyl tertiary butyl ether

TAME = Tertiary amyl methyl ether

(ppb) = Parts per billion

**ANALYTICAL METHOD:**

EPA Method 8260 for Oxygenate Compounds

<sup>1</sup> Laboratory report indicates samples were analyzed outside the EPA recommended holding time.

As of 11/16/01

**Table 3**  
**Groundwater Analytical Results**  
Former Chevron Service Station #9-7127  
I-580 and Grant Line Road  
Tracy, California

---

**EXPLANATIONS:**

Groundwater monitoring data and laboratory analytical results prior to May 23, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.

( $\mu$ mhos/cm) = Micromhos per centimeter

(Pre) = Pre-purge reading

DO = Dissolved Oxygen

(Post) = Post-purge reading

(mg/L) = Milligrams per liter

-- = Not Measured/Not Analyzed

ORP = Oxidation-Reduction Potential

(mV) = Millivolts

(ppm) = Parts per million

°C/°F = Degrees Celsius/Degrees Fahrenheit

Conduct. = Conductivity

Temp. = Temperature
