**Re: First Semi-Annual 2007 Status Report**

Former Chevron Station 9-7127  
I-580 and Grant Line Road  
Tracy, California

Dear Mr. Chan:

On behalf of Chevron Environmental Management Company (Chevron), Conestoga-Rovers & Associates (CRA) has prepared this *First Semi-Annual 2007 Status Report* summarizing the monitoring and sampling activities performed at the site referenced above.

The site is a former Chevron gasoline service station located at the intersection of Grant Line Road and Interstate 580 in Tracy, California (Figure 1). Former station facilities include a station building, three underground storage tanks (USTs), and two dispenser islands (Figure 2). The site is currently a vacant lot bounded on the north by Interstate 580 and to the south, east, and west by ranch property. The surrounding land use is primarily agricultural.

**FIRST SEMI ANNUAL 2007 ACTIVITIES**

On May 9, 2007, Gettler-Ryan, Inc. (G-R) of Dublin, California, monitored and sampled wells MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8. G-R gauged well MW-1 for depth to water, but did not sample the well due to the presence of separate phase hydrocarbons (SPH). G-R's *Groundwater Monitoring and Sampling Report* is included as Attachment A.

Depth to groundwater ranged from 12.38 to 29.73 feet below grade (ftbg). Groundwater flow direction was to the northeast at a gradient of 0.02 to 0.05 foot per foot (ft/ft). A groundwater elevation contour map is presented as Figure 1 in Attachment A.

Total petroleum hydrocarbons as gasoline (TPHg) was detected at a maximum concentration of 40,000 micrograms per liter ( $\mu\text{g}/\text{L}$ ) in MW-3. Methyl tertiary butyl ether (MTBE) was not detected in any of the wells sampled. Benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected at maximum concentrations of 9,200  $\mu\text{g}/\text{L}$ , 660  $\mu\text{g}/\text{L}$ , 590  $\mu\text{g}/\text{L}$ , and 1,300  $\mu\text{g}/\text{L}$ , respectively, in MW-3. Table A below summarizes TPHg, benzene, and MTBE concentrations reported this quarter. A summary of all analytical results is presented as Tables 1 and 2 in Attachment A.

## **CONCLUSION AND RECOMMENDATIONS**

The sources of TPHg and BTEX appear to be the former USTs and dispenser islands. TPHg is detected in MW-3, which is down-gradient of the source. Though hydrocarbon concentrations increased slightly, overall, TPHg and BTEX concentrations are decreasing. Separate phase hydrocarbons are still present in MW-1. CRA will schedule several product removal events using a vacuum truck in MW-1 and MW-3. CRA recommends continued monitoring of site wells.

Dear Ms. Esters:

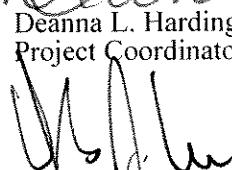

This report documents the most recent groundwater monitoring and sampling event performed by Gettler-Ryan Inc. (G-R) at the referenced site. All field work was conducted in accordance with G-R Standard Operating Procedure - Groundwater Sampling (attached).

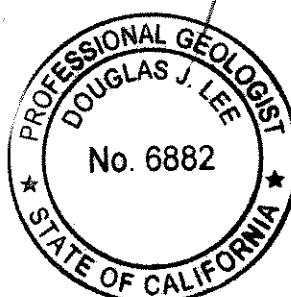

Static groundwater levels were measured and the wells were checked for the presence of separate-phase hydrocarbons. Static water level data, groundwater elevations, and separate-phase hydrocarbon thickness (if any) are presented in the attached Table 1. A Potentiometric Map is included as Figure 1.

Groundwater samples were collected from the monitoring wells and submitted to a state certified laboratory for analyses. The field data sheets for this event are attached. Analytical results are presented in the table(s) listed below. A Concentration Map is included as Figure 2. The chain of custody document and laboratory analytical report are also attached.

Please call if you have any questions or comments regarding this report. Thank you.

**EXPLANATIONS:**

Groundwater monitoring data and laboratory analytical results prior to May 23, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.

TOC = Top of Casing

(ft.) = Feet

GWE = Groundwater Elevation

(msl) = Mean sea level

DTW = Depth to Water

SPHT = Separate Phase Hydrocarbon Thickness

SPH = Separate Phase Hydrocarbons

TPH-G = Total Petroleum Hydrocarbons as Gasoline

B = Benzene

T = Toluene

E = Ethylbenzene

X = Xylenes

MTBE = Methyl tertiary butyl ether

-- = Not Measured/Not Analyzed

NP = No Purge

(ppb) = Parts per billion

QA = Quality Assurance/Trip Blank

\* TOC elevations are relative to msl.

\*\* GWE has been corrected for the presence of SPH, correction factor = [(TOC - DTW) + (SPHT x 0.80)].

<sup>1</sup> ORC present in well.

<sup>2</sup> ORC Installed.

<sup>3</sup> Confirmation run.

<sup>4</sup> Due to the presence of Separate Phase Hydrocarbons results for EPA 8015/8020 do not represent true values for TPH-Gasoline, BTEX, or MTBE.

The results were reported respectively as 24,000, 140, 830, 210,1500 and <0.05 mg/Kg.

<sup>5</sup> Estimated Groundwater Elevation.

<sup>6</sup> Well was not sampled due to damaged casing and debris in well. Ground water elevation is an estimate.

<sup>7</sup> Laboratory report indicates gasoline C6-C12.

<sup>8</sup> Laboratory report indicates gasoline C6-C12 + unidentified hydrocarbons <C6.

<sup>9</sup> Laboratory report indicates result exceeds the linear range of calibration.

<sup>10</sup> Laboratory report indicates gasoline.

<sup>11</sup> Laboratory report indicates the results for this hydrocarbon is elevated due to the presence of single analyte peak(s) in the quantitation range.

<sup>12</sup> Chromatogram pattern indicates an unidentified hydrocarbon.

<sup>13</sup> Product + Water.

<sup>14</sup> MTBE by EPA Method 8260 was analyzed outside the EPA recommended holding time.

<sup>15</sup> Skimmer in well.

<sup>16</sup> ORC not present in well.

<sup>17</sup> MTBE by EPA Method 8260.

<sup>18</sup> 4.5 liters of SPH removed from skimmer and 2.5 liters of SPH removed from well.

<sup>19</sup> BTEX and MTBE by EPA Method 8260.

<sup>20</sup> Removed ORC from well.

<sup>21</sup> Area inaccessible to truck; unable to purge.

**EXPLANATIONS:**

Groundwater monitoring data and laboratory analytical results prior to May 23, 2000, were compiled from reports prepared by Blaine Tech Services, Inc.

( $\mu\text{mhos}/\text{cm}$ ) = Micromhos per centimeter

DO = Dissolved Oxygen

(mg/L) = Milligrams per liter

ORP = Oxidation-Reduction Potential

(mV) = Millivolts

(ppm) = Parts per million

$^{\circ}\text{C}/^{\circ}\text{F}$  = Degrees Celsius/Degrees Fahrenheit

Conduct. = Conductivity

Temp. = Temperature

(Pre) = Pre-purge reading

(Post) = Post-purge reading

-- = Not Measured/Not Analyzed

## STANDARD OPERATING PROCEDURE - GROUNDWATER SAMPLING

Gettler-Ryan Inc. field personnel adhere to the following procedures for the collection and handling of groundwater samples prior to analysis by the analytical laboratory. Prior to sample collection, the type of analysis to be performed is determined. Loss prevention of volatile compounds is controlled and sample preservation for subsequent analysis is maintained.

Prior to sampling, the presence or absence of free-phase hydrocarbons is determined using an interface probe. Product thickness, if present, is measured to the nearest 0.01 foot and is noted in the field notes. In addition, all depth to water level measurements are collected with a static water level indicator and are also recorded in the field notes, prior to purging and sampling any wells.

After water levels are collected and prior to sampling, if purging is to occur, each well is purged a minimum of three well casing volumes of water using pre-cleaned pumps (stack, suction, Grundfos), or disposable bailers. Temperature, pH and electrical conductivity are measured a minimum of three times during the purging. Purging continues until these parameters stabilize.

Groundwater samples are collected using disposable bailers. The water samples are transferred from the bailer into appropriate containers. Pre-preserved containers, supplied by analytical laboratories, are used when possible. When pre-preserved containers are not available, the laboratory is instructed to preserve the sample as appropriate. Duplicate samples are collected for the laboratory to use in maintaining quality assurance/quality control standards. The samples are labeled to include the job number, sample identification, collection date and time, analysis, preservation (if any), and the sample collector's initials. The water samples are placed in a cooler, maintained at 4°C for transport to the laboratory. Once collected in the field, all samples are maintained under chain of custody until delivered to the laboratory.

The chain of custody document includes the job number, type of preservation, if any, analysis requested, sample identification, date and time collected, and the sample collector's name. The chain of custody is signed and dated (including time of transfer) by each person who receives or surrenders the samples, beginning with the field personnel and ending with the laboratory personnel.

A laboratory supplied trip blank accompanies each sampling set. For sampling sets greater than 20 samples, 5% trip blanks are included. The trip blank is analyzed for some or all of the same compounds as the groundwater samples.

As requested by Chevron Environmental Management Company, the purge water and decontamination water generated during sampling activities is transported by IWM to Chemical Waste Management located in Kettleman Hill, California.

### Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

N.D.	none detected	BMQL	Below Minimum Quantitation Level
TNTC	Too Numerous To Count	MPN	Most Probable Number
IU	International Units	CP Units	cobalt-chloroplatinate units
umhos/cm	micromhos/cm	NTU	nephelometric turbidity units
C	degrees Celsius	F	degrees Fahrenheit
Cal	(diet) calories	lb.	pound(s)
meq	milliequivalents	kg	kilogram(s)
g	gram(s)	mg	milligram(s)
ug	microgram(s)	l	liter(s)
ml	milliliter(s)	ul	microliter(s)
m3	cubic meter(s)	fib >5 um/ml	fibers greater than 5 microns in length per ml
<	less than – The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
>	greater than		
ppm	parts per million – One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
ppb	parts per billion		
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture.		

U.S. EPA data qualifiers:

Organic Qualifiers		Inorganic Qualifiers	
A	TIC is a possible aldol-condensation product	B	Value is <CRDL, but $\geq$ IDL
B	Analyte was also detected in the blank	E	Estimated due to interference
C	Pesticide result confirmed by GC/MS	M	Duplicate injection precision not met
D	Compound quantitated on a diluted sample	N	Spike amount not within control limits
E	Concentration exceeds the calibration range of the instrument	S	Method of standard additions (MSA) used for calculation
J	Estimated value	U	Compound was not detected
N	Presumptive evidence of a compound (TICs only)	W	Post digestion spike out of control limits
P	Concentration difference between primary and confirmation columns $>25\%$	*	Duplicate analysis not within control limits
U	Compound was not detected	+	Correlation coefficient for MSA $<0.995$
X,Y,Z	Defined in case narrative		

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.
