Re: **Dispenser and Piping Replacement Sampling Report**
Shell-Branded Service Station
5251 Hopyard Road, Pleasanton, California
Incident #98995843, SAP Number 135785

Dear Mr. Smith:

On behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell), this report prepared by Toxicchem Management Systems, Inc. (TOXICHEM) transmits the results of sampling conducted during station upgrade activities at the site referenced above. Included in this report is a brief discussion of the site description, scope of work, findings, and conclusions.

SITE DESCRIPTION

The operating Shell branded service station site is located at 5251 Hopyard Road in a mixed commercial and residential area of Pleasanton, California (Figure 1). TOXICHEM recently performed a ½ mile radius well survey through the Department of Water Resources and the Zone 7 Water Agency (Figure 1). A total of five existing water wells were reported within a ½ mile radius, all located at least 1,550 feet north of the site (north of Interstate I580). However, upon field inspection, no wells could be observed in the mapped locations. Two wells were listed as being abandoned or destroyed. One of these wells (3S/1E6Q2), an irrigation well was located near the Shell site (approximately 100 to 300 feet southeast) but is listed as being destroyed. Known well details are presented on Tables 1 and 2.

A total of eight groundwater monitoring wells have been installed at the site (five on-site, and three off-site). Groundwater monitoring and sampling of the wells was initiated in January 1991 and has been performed annually during the second quarter since 1995. During the most recent groundwater monitoring event (May 3, 2004), static groundwater occurred within the on-site wells between 5.4 and 11.2 feet below ground surface (bgs) with radial flow from Well S-2 to the southeast. The maximum concentration of petroleum hydrocarbons was present in Well S-1 at 3,700 micrograms per liter (µg/L) total purgeable petroleum hydrocarbons (TPPH), 32 µg/L benzene, 21 µg/L toluene, 170 µg/L ethylbenzene and 34 µg/L total xylenes (BTEX compounds). The maximum concentration of methyl tertiary butyl ether (MtBE) was present in Well S-2 at 510 µg/L during the May 2004 sampling event.

SCOPE OF WORK

The scope of this investigation included the following activities:

- Collect soil samples from beneath the product dispensers, product and vapor piping at the direction of the Livermore-Pleasanton Fire Department (LPFD).
- Collect groundwater and free product samples from beneath the product piping at the direction of the LPFD.
- Collect samples of residual materials generated during excavation activities and profile the pea gravel for re-use and the soil for disposal.
- Direct limited overexcavation of hydrocarbon impacted soil.

FINDINGS

Product Dispenser Sampling

Prior to TOXICHEM's arrival on September 20, 2004, Wayne Perry Inc. of Sacramento, California had removed the eight product dispensers and exposed the adjacent product lines to facilitate environmental sampling (Figure 2). At the direction of the LPFD, TOXICHEM collected soil samples beneath (or adjacent to) each of the eight former product dispensers at between 1.7 and 2.7 feet bgs. Sample locations are shown on Figure 3. Soil analytical data is presented in Table 3 and the certified laboratory analytical report is included in Attachment A. Field procedures are presented as Attachment B.

Due to the presence of a darker stained lense of soil in the vicinity of dispenser DS-2, additional sampling and limited overexcavation was performed at the direction of the LPFD. At the maximum depth of excavation (3 feet bgs), Sample DS-2E reported 0.012 mg/kg MtBE. The stockpile of soil generated from the limited overexcavation was also sampled at the direction of the LPFD. This sample (DS-2C) did not contain detected concentrations of petroleum hydrocarbons or oxygenates.

Product and Vapor Line Soil and Liquid Sampling

Prior to TOXICHEM's arrival on September 28, 2004, Wayne Perry Inc. had exposed all product and vapor piping to facilitate environmental sampling. Due to the unavailability of the vacuum truck typically utilized to remove the pea gravel from around the piping, Wayne Perry utilized a backhoe and hand shovels to remove the pea gravel. They had previously purged all the lines, however Wayne Perry pointed out a location where they had ruptured the product line causing a release of gasoline. The gasoline may have been trapped in a low spot in the line and therefore wasn't completely purged. Upon inspection, free product (gasoline) was observed locally within the pea gravel remaining adjacent to the product lines at approximately 3.5 feet bgs. The volume of gasoline released is unknown. Free product was observed in the area of DSV-9 and staining of pea gravel was observed in the area of DSV-14. It appeared that the release was contained within the bottom and sides of the product line trench (Figure 3). The LPFD directed TOXICHEM to obtain a sample of the gasoline for laboratory analysis (DSW-9d3.5) and collect a soil immediately beneath the product (DSV-9d4.0). Due to unknown electrical conduits running the length of the trench beneath the product lines, immediate overexcavation could not be performed.

Soil sampling was then performed beneath the exposed product and vapor lines under the direction of the LPFD (Table 1, Figure 3). Additionally, shallow groundwater present on either

end of the east-west trending product line trench was sampled at the request of the LPPFD (DSW-11d3.5 and DSW-13d4.5).

Overexcavation and Confirmation Sampling

Prior to TOXICHEM's arrival on September 30, 2004, Wayne Perry Inc. had removed all product piping from the trenches and removed the electrical conduits from beneath the east-west trench (the area of overexcavation). During overexcavation, TOXICHEM screened the immediate vicinity with a lower explosive meter (LEL) and photoionization detector PID to ensure a safe working environment. Overexcavation was performed along the trench screening soils through visual and olfactory observation and with the PID. During overexcavation minor liquid was encountered near the west end of the trench, but upon excavation, saturated into removed soils that were stockpiled on visqueen. The resultant overexcavation measured approximately 50 feet in length and 5 feet in width. Depth varied from 4 feet to 10 feet with details presented on Figure 3. It is estimated that at minimum, 75 cubic yards of soil was overexcavated. Soil samples were then obtained at the maximum extent of excavation, in general within stiff gray clay. Although allowed to remain open, groundwater did not enter the trench even at the maximum depth of 10 feet bgs. Groundwater was measured in Well S-1 at 8.72 feet below the top of casing and no free product was measured utilizing a groundwater interface probe.

Soil Analytical Data

Soil analytical data are summarized below and are presented on Table 3. At the request of the LPPFD, all soil samples (including soil stockpile and pea gravel samples) were analyzed for TPPH, BTEX compounds, MtBE, di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-Butyl alcohol (TBA), 1,2-DCA and EDB by EPA Method 8260B and for total lead by EPA Method 6010B. Samples were also selected for TEPH analysis (including the soil stockpile and pea gravel composite samples). The certified analytical reports and chain-of-custody documentation for the soil samples are presented as Attachment A.

- During the dispenser sampling performed on September 20, 2004 eight of the sixteen soil samples collected between 1.7 and 2.7 feet bgs contained detectable concentrations of petroleum hydrocarbons. The maximum concentrations detected are as follows; 360 mg/kg TEPH in DS-3; 470 mg/kg TPPH in DS-6A; 0.012 mg/kg MtBE in DS-2E; 0.017 mg/kg TBA in DS-1A and 5.4 total lead in DS-1B. Neither benzene, nor other additional oxygenate was detected in the dispenser samples collected (Table 3).
- Prior to overexcavation, the maximum concentration of petroleum hydrocarbons in soil reported in a sample collected beneath a product or vapor line was reported in Sample DSV-9 at 4.0 feet bgs. This is the sample collected beneath the observed product and contained 640 mg/kg TEPH, 24,000 mg/kg TPPH, 65 mg/kg benzene and no detectable MtBE (at an elevated detection limit of 13 mg/kg). The maximum concentrations of MtBE and TBA prior to overexcavation were reported in Sample DSV-4 at 3.5 feet bgs at 0.12 mg/kg and 0.065 mg/kg, respectively.
- After overexcavation, confirmation soil samples were collected. The maximum concentrations of TPPH and benzene were reported in Sample DSV-15 at 7 feet bgs at 5.6 mg/kg and 0.088 mg/kg, respectively. The maximum concentrations of MtBE and TBA after overexcavation was

reported in Sample DSV-4 at 5 feet bgs at 0.20 mg/kg and 0.22 mg/kg, respectively.

- Lead was detected in every soil sample analyzed at concentrations ranging from 2.0 mg/kg (DS-5B at 1.7 feet bgs) to 11 mg/kg (DSV-4 at 5 feet bgs).

Groundwater and Product Analytical Data

Groundwater and product analytical data are summarized below and are presented on Table 4. At the request of the LPPD, all liquid samples were analyzed for TPPH, BTEX compounds, MtBE, DIPE, ETBE, TAME, TBA, 1,2-DCA and EDB by EPA Method 8260B. Additionally, the product sample was analyzed for TEPH. The certified analytical reports and chain-of-custody documentation for the soil samples are presented as Attachment A.

- The product observed within the pea gravel was collected and analyzed by the laboratory as directed by the LPPD. The laboratory reported this sample (DSW-9d at 3.5 feet bgs) to contain 84% of its constituents in the gasoline range [840,000,000 (micrograms per kilogram) $\mu\text{g}/\text{kg}$], and 16% (160,000,000 $\mu\text{g}/\text{kg}$) in the early diesel range.
- Groundwater sampled at the eastern end of the trench (DSW-11d3.5) contained 1,200 $\mu\text{g}/\text{L}$ TPPH, 120 $\mu\text{g}/\text{L}$ benzene, 5.9 $\mu\text{g}/\text{L}$ MtBE and 35 $\mu\text{g}/\text{L}$ TBA.
- Groundwater sampled at the western end of the trench (DSW-13d4.5) contained 1,300,000 $\mu\text{g}/\text{L}$ TPPH that didn't match the laboratory gasoline standard.

Residual Sampling and Disposal Documentation

During uncovering of the tank tops and product lines, approximately 140 cubic yards of pea gravel were generated and stockpiled on-site. Stockpile samples were collected and analyzed as directed by the LPPD. The analytical results are presented in Table 1 and were submitted via email to the LPPD on October 7, 2004. Wayne Perry Inc. subsequently received approval from the LPPD to reuse the pea gravel to infill the tank pit and excavated trenches.

Native soil excavated during trenching and overexcavation activities was stockpiled on visqueen, sampled and profiled for disposal. New trenches were dug for vent lines and electrical lines. Between October 9 and November 16, 2004, approximately 377 tons of soil was hauled by Manley and Sons Trucking to Forward Landfill in Manteca, California for disposal. Disposal documentation is included in Attachment C.

To facilitate tank top upgrade activities, periodic dewatering was performed by pumping groundwater out of the 12-inch diameter tank backfill well into a temporary storage tank utilizing a trash pump. The tank was emptied periodically by a vacuum truck operated by PSC Industrial Outsourcing, Inc. Approximately 33,749 gallons of groundwater were hauled by PSC to the Shell Oil Products US Martinez Refinery between October 1 and October 27, 2004. Bill of Lading documentation is presented in Attachment C.

All removed piping, sumps and miscellaneous equipment was contained within two bins and transported to ECI under hazardous waste manifest for disposal. Hazardous waste manifests are included in Attachment C.

CONCLUSIONS AND RECOMMENDATIONS

Based on the results of this investigation, TOXICHEM concludes that:

- The free product observed beneath the east-west product line trench as sampled by DSW-9d3.5 was minimal in extent and was removed (approximately 2 days after occurrence) by overexcavating soils to the maximum extent laterally feasible.
- Overexcavation was performed which removed a minimum of 75 cubic yards of hydrocarbon affected material. Upon completion, the excavated trench remained dry, even to the maximum extent excavated of 10 feet bgs due to the stiff clay nature of the soils.
- A total of approximately 33,749 gallons of groundwater was removed from the UST area.
- Minor concentrations of petroleum hydrocarbons, BTEX compounds, MtBE and TBA remain in soil at the site. The maximum residual concentrations remaining in site soils after overexcavation are 5.6 mg/kg TPPH, 0.088 mg/kg benzene, 0.20 mg/kg MtBE and 0.22 mg/kg TBA.
- An Unauthorized Release Report (URR) was submitted by Shell to the LPPD via email on October 4, 2004. A follow-up multi-copy carbon paper ink-signed original was then submitted on October 12 2004 at the request of the LPPD (a copy is included as Attachment D).
- No known operating water supply wells are located within a ½ mile radius of the site.
- To determine if groundwater has been impacted by the free product release, it is proposed that all wells be sampled for TEPH, TPPH, BTEX compounds, MtBE and TBA in January 2005. Then, based on these results and the scheduled second quarter annual sampling event, a modified sampling schedule will be proposed.

If you have any questions regarding this report, please contact me at (650) 551-0112.

Sincerely,

Toxichem Management Systems, Inc.

Ross Tinline, RG.

TPEH = Total purgeable extractable hydrocarbons
 TPPH = Total purgeable petroleum hydrocarbons
 MtBE = Methyl tert-butyl ether
 TBA = Tertiary butyl alcohol, or t-butanol
 DIPE = Di-isopropyl ether
 ETBE = Ethyl tertiary-butyl ether
 TAME = Tertiary amyl methyl ether
 1,2-DCA = 1,2-Dichloroethane, or ethylene dichloride (EDC)
 EDB = Ethylene dibromide
 mg/kg = Milligrams per kilogram
 bgs = Below ground surface
 NA = Not analyzed

San Carlos, CA 94070

Attn.: Ross Tinline

Project#: EQ-77.1A

Project: 98995843

Site: 5251 Hopyard Road, Pleasanton

Dear Mr. Tinline

Attached is our report for your samples received on 09/28/2004 17:39

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/12/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu
Project Manager

Dear Ross

Attached is our report for your samples received on 09/20/2004 18:45. This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/04/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu
Project Manager

Dear Ross

Attached is our report for your samples received on 10/06/2004 12:50

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/20/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu
Project Manager

Dear Mr. Tinline

Attached is our report for your samples received on 09/30/2004 19:25

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/14/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu
Project Manager

ATTACHMENT B
FIELD PROCEDURES

FIELD PROCEDURES

Soil Excavation Procedures

Soil excavation was performed by utilizing a rubber-tired backhoe. A photo ionization detector was used to screen the soil and guide the excavation limits for total petroleum hydrocarbons. An LEL meter was utilized when deemed necessary to ensure site safety. Excavated soil was stockpiled onsite on visqueen.

Soil Sampling Procedures

Soil samples were collected by advancing a hand driven stainless-steel sampling sleeve and brass ring into undisturbed soil, or alternatively by driving a brass sleeve into native soil excavated by the backhoe. Soil samples were retained in brass rings, capped with Teflon squares and plastic end caps, labeled, and immediately stored in an iced chest. The soil samples, along with a completed chain of custody were submitted to a certified laboratory.

Groundwater and Product Sampling Procedures

Groundwater and product samples were collected utilizing appropriate precleaned laboratory glassware. Due to the shallow nature of sampling within the trenches, a precleaned cap was utilized to bail water directly into the sample containers. The containers were then capped, labeled and immediately stored in an iced chest (the product sample was kept separate from the groundwater samples). The samples, along with a completed chain of custody were submitted to a certified laboratory.

Stockpile Sampling Procedures

The soil and pea gravel stockpiles were sampled by driving brass sleeves into freshly exposed material and composited either in the field or laboratory to represent the material in the stockpile. The brass sleeves were then capped with Teflon squares, affixed with plastic end caps, labeled, placed in an iced cooler and transported to the laboratory.

LAND DISPOSAL RESTRICTION NOTIFICATION FORM

The waste represented on this manifest is not generated by a chemical manufacturing plant, coke-by-product recovery plant of petroleum refinery. As such, it is not regulated under 40 CFR Part 61, Subpart FF (NESHAP'S for Benzene Operations).

Pursuant to 40 CFR 268.7 I am notifying Ecology Control Industries that the material described by the above manifest is a nonwastewater, Non-RCRA solid hazardous waste and not currently subject to EPA Land Disposal Restrictions.

Pursuant to CCR 22 66268.7 I am notifying Ecology Control Industries that the material described by the manifest is a metal containing Non-RCRA solid hazardous waste (66268.29(g)), and an organics containing Non-RCRA solid hazardous waste (66268.29(k)). The treatment standards for these wastes have been repealed. This waste is no longer subject to land disposal restrictions.

I am an authorized agent/representative of the generator. I certify that all information submitted in this and associated documents is complete and accurate to the best of my knowledge. The tanks on the transport equipment have been numbered to correspond with the information provided above. In the event that the tanks do not correspond to the form, I will pay any and all costs incurred in rectifying the discrepancies between the tank(s) and the form. In the event that the tank(s) contain excessive solids or liquids, I agree to pay the cost of preparation, transportation and disposal/recycling of the excess material according to the schedule of charges in effect at the time of receipt of the tank(s). Further, I will not hold Ecology Control Industries responsible for any damage to tanks which occurs after the tanks are removed from the ground.

The waste represented on this manifest is not generated by a chemical manufacturing plant, coke-by product recovery plant of petroleum refinery. As such, it is not regulated under 40 CFR Part 61, Subpart FF (NESHAPS for Benzene Operations).

____ Pursuant to 40 CFR 268.7 I am notifying Ecology Control Industries that the material described by the above manifest is a nonwastewater, Non-RCRA solid hazardous waste and not currently subject to EPA Land Disposal Restrictions.

____ Pursuant to CER 22 66268.7 I am notifying Ecology Control Industries that the material described by the manifest is a metal containing Non-RCRA solid hazardous waste (66268.29(g)), and an organics containing Non-RCRA solid hazardous waste (66268.29(k)). The treatment standards for these wastes have been repealed. This waste is no longer subject to land disposal restrictions.

I am an authorized agent/representative of the generator. I certify that all information submitted in this and associated documents is complete and accurate to the best of my knowledge. The tanks on the transport equipment have been numbered to correspond with the information provided above. In the event that the tanks do not correspond to the form, I will pay any and all costs incurred in rectifying the discrepancies between the tank(s) and the form. In the event that the tank(s) contain excessive solids or liquids, I agree to pay the cost of preparation, transportation and disposal/recycling of the excess material according to the schedule of charges in effect at the time of receipt of the tank(s). Further, I will not hold Ecology Control Industries responsible for any damage to tanks which occurs after the tanks are removed from the ground.

AUTHORIZED REPRESENTATIVE

COMMENTS
 DURING PRODUCT PIPING REPLACEMENT ACTIVITIES, THE FIBERGLASS LINE WAS RUPTURED DURING EXPOSURE FOR SAMPLING. FRESH GASOLINE WAS OBSERVED ON SOIL AND WATER CONTAINED 1,300,000µg/L TPH. OVEREXCAVATION WAS PERFORMED ON 9-30-04 AFTER UNDERLYING ELECTRICAL CONDUITS REMOVED.
