Re: **First Quarter 2000 Monitoring Report**  
Connell Automobile Dealership  
3093 Broadway  
Oakland, California  
StID #469

Dear Ms. Hugo:

On behalf of Messrs. George Hill and Gordon Linden and as required by the Alameda County Health Care Services Agency (ACHCSA), Cambria Environmental Technology, Inc. (Cambria) has prepared this quarterly monitoring report for the above-referenced site. This report satisfies the quarterly reporting requirements prescribed by 23 CCR 2652d. The site background, first quarter 2000 activities and results, and the anticipated second quarter 2000 activities are presented below.

## SITE BACKGROUND

Three underground storage tanks (USTs) which previously contained gasoline, diesel, and waste oil were removed from the subject site in December 1989. Soil and groundwater investigation has been ongoing since 1990. Between October 1996 and March 1998, operation of a soil vapor extraction (SVE) remediation system removed approximately 1,421 lbs of hydrocarbons. Manual removal of hydrocarbons from site monitoring wells has been ongoing since 1991.

## FIRST QUARTER 2000 ACTIVITIES AND RESULTS

**Groundwater Monitoring:** Cambria monitored site groundwater following the sampling protocol described in the ACHCSA May 3, 1999 letter to Messrs. Hill and Linden. On February 9, 2000, Cambria gauged and sampled groundwater wells MW-1, MW-4, MW-6, MW-7, MW-8, MW-9, MW-13, MW-14, and MW-15. The samples were analyzed by a California Department of Health Services (DHS) certified analytical laboratory for total petroleum hydrocarbons (TPH) as diesel, TPH as motor oil (TPHmo), TPH as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes (BTEX), methyl tert-butyl ether (MTBE), EPA List 8010 halogenated volatile organic compounds (HVOCs), semi-volatile organic compounds (SVOCs), lead, cadmium, chromium, zinc, and nickel

(LUFT metals). Prior to sampling, Cambria inspected the wells for separate-phase hydrocarbons (SPH). The analytical laboratory filtered all samples analyzed for LUFT metals. The groundwater elevations, groundwater flow direction, and gradient are shown on Figure 1. The groundwater and analytical data are presented in Tables 1, 2, and 3. SPH thicknesses and quantities removed are presented in Table 4. The analytical laboratory report is included as Attachment A. Field data sheets are included as Attachment B.

**Groundwater Flow Direction:** Based on the February 9, 2000, depth-to-water measurements, groundwater flowed eastward with a gradient of approximately 0.08 ft/ft during the first quarter of 2000 (Figure 1). This result is consistent with the historical local groundwater flow direction.

**Contaminant Distribution in Groundwater:** In general, monitoring results were consistent with past results for this site. SPH were detected in wells MW-1 and MW-6 (Figure 1). The primary contaminants of concern (COCs) in site groundwater are benzene, 1,2-DCA, naphthalene, lead and nickel; these COCs are typically associated with releases from USTs containing gasoline, diesel, and/or motor oil. The maximum benzene and 1,2-DCA concentrations detected in groundwater were 32,000 ug/l and 1,100 ug/l, respectively, in MW-15 (Table 1). The maximum naphthalene concentration detected in groundwater was 700 ug/l in MW-4 (Table 2). Maximum dissolved metal concentrations of 2,500 ug/l nickel and 1,800 ug/l lead were detected in wells MW-14 and MW-15, respectively (Table 3). The contaminant plumes are adequately defined cross-gradient (south) and downgradient of the former UST complex location by wells MW-7 and MW-13, respectively.

**Separate-Phase Hydrocarbon Recovery Device Installation:** Between February 9, 2000 and March 3, 2000, Cambria installed passive SPH recovery devices and verified proper removal of SPH from wells MW-1, MW-6 and MW-14. As proposed by Subsurface Consultants, Inc. in their April 15, 1999 *Work Plan*, hydrophobic absorbent socks were installed in wells MW-1 and MW-14, and a product skimming device equipped with a hydrophobic filter was installed in MW-6. (The selected product skimmer can be outfitted with a pump and containment vessel for continuous SPH removal should the quantity of SPH in well MW-6 increase.) Cambria visited the site on February 15, February 25, and March 3, 2000, to inspect the devices and maximize SPH recovery. Also, since a sheen was present on groundwater samples collected from MW-4, an absorbent sock was installed in MW-4. The absorbent sock was removed from MW-4 on February 25, 2000, because no SPH were recovered from this well after 16 days. Although limited SPH recovery has occurred in MW-14, Cambria left the absorbent sock in place and will continue to evaluate the effectiveness of maintaining a passive SPH removal device in this well. The passive recovery systems in MW-1 and MW-6 are effectively removing SPH from these wells.

**Manual Separate-Phase Hydrocarbon Removal:** During the February 9, 2000, monitoring event and prior to installing passive recovery devices, Cambria manually removed SPH from wells MW-1

and MW-6. Cambria technicians removed SPH using bailers specially designed for floating product collection. As of March 3, 2000, approximately 906 lbs of SPH have been recovered from site monitoring wells by manual methods. Table 4 presents the SPH thickness measurements, the amount of SPH removed from the wells during each site visit, and the cumulative mass of SPH manually removed from each well.

### **ANTICIPATED SECOND QUARTER 2000 ACTIVITIES**

***Groundwater Monitoring and Reporting:*** As required by the ACHCSA, Cambria will gauge and sample site wells MW-1, MW-4, MW-6, MW-7, MW-8, MW-9, MW-13, MW-14, and MW-15 on a quarterly basis. Cambria will analyze groundwater samples for TPHd, TPHmo, TPHg, BTEX, MTBE, EPA List 8010 HVOCs, SVOCs, and LUFT metals. Cambria will prepare a quarterly monitoring report that will include tabulated groundwater elevation and analytical data and a potentiometric surface map.

***Separate-Phase Hydrocarbon Removal:*** Cambria will conduct monthly SPH recovery events. Proper functioning of the recovery devices in MW-1, MW-6, and MW-14 will be verified, and collected SPH will be transferred to labeled, DOT-approved steel drums pending disposal or recycling.

**Table 1. Groundwater Elevation and Analytical Data: Volatile Hydrocarbons and HVOCs**

Connell Automobile Dealership, 3093 Broadway, Oakland, California

| Well ID<br><i>TOC Elev.</i><br>(ft) | Sampling<br>Date | Depth to<br>Groundwater<br>(ft) | Groundwater<br>Elevation<br>(ft) | TVH<br><----- | TPHg | Benzene | Toluene | Ethyl -<br>benzene<br>-ug/l-----> | Xylenes | MTBE | 1,2-DCA | Other HVOCs |
|-------------------------------------|------------------|---------------------------------|----------------------------------|---------------|------|---------|---------|-----------------------------------|---------|------|---------|-------------|
|-------------------------------------|------------------|---------------------------------|----------------------------------|---------------|------|---------|---------|-----------------------------------|---------|------|---------|-------------|

**Abbreviations and Notes:**

ug/l = micrograms per liter = parts per billion = ppb

TVH = Total Volatile Hydrocarbons

TEH = Total Extractable Hydrocarbons

MTBE = Methyl tert-butyl ether

\* = Suspect laboratory contamination contributing to test result.

\*\* = Fuel fingerprint analysis indicates MTBE is not present in the free product sample collected from this well.

\*\*\* = Duplicate sample sent to a different chemical laboratory.

DCB = 1, 3 Dichlorobenzene

MCB = Chlorobenzene

ND = none detected above laboratory reporting limit, see laboratory report for individual reporting limits.

1,2-DCA = 1,2 Dichloroethane

TPHg = Total petroleum hydrocarbons as gasoline

HVOCs = Halogenated volatile organic compounds by EPA Method 8010

*TOC Elev. (ft)* = Top of casing elevation in feet above mean sea level

DBCM = Dibromochloromethane

TCM = Chloroform = trichloromethane

<0.5 = Chemical not present at a concentration in excess of detection limit shown

MW-1 was initially referred to as Sample 5

-- = Sample not analyzed

FP = Free product encountered in well

1 = Sample exhibits fuel pattern which does not resemble standard

2 = Lighter hydrocarbons than indicated standard

3 = Presence of this compound confirmed by second column, however, the confirmation concentration differed from the reported result by more than a factor of two

4 = detection may potentially be a false positive, to be checked during the next event.

5 = One or more of the following substances found: Acetone, 1,2-Dibromoethane, Ethylbenzene, Styrene, Isopropylbenzene, Propylbenzene,

1,3,5-Trimethylbenzene, 2-Chlorotoluene, 1,2,4-Trimethylbenzene,

n-Butylbenzene, and Naphthalene. See laboratory results for details.

1,1 DCA = 1,1 Dichloroethane

*TOC Elev. (ft)* = Top of casing elevation, surveyed to an arbitrary datum

**Abbreviations and Notes:**

SVOCs = Semi-volatile organic compounds

\* = Duplicate sample sent to a different chemical laboratory

TEH = Total extractable hydrocarbons

< n = Not detected above n ug/l

TPHd = Total petroleum hydrocarbons as diesel

-- = Not analyzed/not available

TPHmo = Total petroleum hydrocarbons as motor oil

ND = None detected above laboratory reporting limit, see laboratory report for individual re

Other SVOC's = All other compounds analyzed by EPA Method 8270

*TOC Elev. (ft)* = Top of casing elevation, surveyed to an arbitrary datum

**Abbreviations and Notes:**

NM = product was being removed by vapor extraction at time of measurement.

1 = LPH removed by manual bailing

2 = LPH removed from well by absorbent sock

3 = LPH removed from well by passive skimmer

4 = vapor extraction system operating in well

-- = Not measured or not applicable

*TOC Elev. (ft)* = Top of casing elevation, surveyed to an arbitrary datum

\*water samples are reported in ug/L, soil and sludge samples in mg/kg, wipes in ug/wipe and all TCLP / STLC / SPLP extracts in ug/L

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

\* surrogate diluted out of range

h) lighter than water immiscible sheen is present; i)liquid sample that contains greater than ~5 vol. % sediment; j) sample diluted due to high organic content

\*water samples are reported in ug/L, soil and sludge samples in mg/kg, wipes in ug/wipe and all TCLP / STLC / SPLP extracts in ug/L

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

\* surrogate diluted out of range

h) lighter than water immiscible sheen is present; i)liquid sample that contains greater than ~5 vol. % sediment; j) sample diluted due to high organic content

DHS Certification No. 1644

# **Product Removal Form Connell Automobile Dealership, Oakland, CA**

By: TWS Date: 2/9/00

Project and Task #: 425-1580-1

| Well | Treatment           | Time  | Gallons Removed* | DTW/<br>DTP | Comments           |
|------|---------------------|-------|------------------|-------------|--------------------|
| MW-1 | <del>SoakEase</del> | 12:00 | 0.05             | DTP         | 23.88, DTW 23.95   |
|      | hand-bail           |       |                  |             |                    |
| MW-4 | <del>SoakEase</del> | 12:15 | 0.00             | 19.76       | No product in well |
|      | Skimmer             |       |                  |             |                    |
| MW-6 | <del>Skimmer</del>  | 12:30 | 0.25             | DTP         | 24.49, DTW 24.93   |
|      | hand bail           |       |                  |             |                    |

\* If SoakEase is removed, wring out used sock into bucket and estimate vol. removed. Saturated socks theoretically hold about 1 quart (0.25 gal) of product. Skimmer receptacle holds about  $\frac{1}{2}$  quart (0.14 gal) of product.

## Notes

Hand bailed MW-1 + MW-6. No product in MW-14 so installed SoakEase in MW-4 where sheen was heavier.

No. of Product Drums Onsite: \_\_\_\_\_

Drum capacity available: \_\_\_\_\_

# Product Removal Form Connell Automobile Dealership, Oakland, CA

By: RWS / ME Date: 2/15/00

Project and Task #: 425-1580-1

| Well | Treatment | Time  | Gallons Removed* | DTW/ DTP | Comments                      |
|------|-----------|-------|------------------|----------|-------------------------------|
| MW-1 | SoakEase  | 12:10 | —                | NM       | some FP absorbed              |
| MW-4 | SoakEase  | 11:50 | —                | NM       | minimal FP absorbed           |
| MW-6 | Skimmer   | 12:00 | 0.07             | NM       | receptacle $\frac{1}{2}$ full |

\* If SoakEase is removed, wring out used sock into bucket and estimate vol. removed. Saturated socks theoretically hold about 1 quart (0.25 gal) of product. Skimmer receptacle holds about  $\frac{1}{2}$  quart (0.14 gal) of product.

Notes MW-1 sock is functioning well. Lowered sock 12" and reinstalled. Will wring out + re install next week.

MW-4 sheen only this well. Will leave sock in place.

MW-6 Receptacle  $\frac{1}{2}$  full, emptied into small drum. Blockage in well may limit function of skimmer, however system is presently working well.

No. of Product Drums Onsite: 1 (5 gal. steel drum)

Drum capacity available: ~ 4.5 gals.

Project and Task #: 425-1580-1

| Well | Treatment | Time  | Gallons Removed* | DTW/<br>DTP | Comments   |
|------|-----------|-------|------------------|-------------|--|
| MW-1 | SoakEase  | 12:35 | 0.0625           | 23.69       | NO PRODUCT THICKNESS<br>~8 oz. PRODUCT RECOVERED |
| MW-4 | SoakEase  | 12:05 | Ø                | 19.30       | NO PRODUCT COLLECTED<br>NO PRODUCT THICKNESS     |
| MW-6 | Skimmer   | 12:20 | 0.01             | 24.25       | 1.5" OF PRODUCT IN<br>SKIMMER.                   |

\* If SoakEase is removed, wring out used sock into bucket and estimate vol. removed. Saturated socks theoretically hold about 1 quart (0.25 gal) of product. Skimmer receptacle holds about  $\frac{1}{2}$  quart (0.14 gal) of product.

## Notes

MW-4: NO PRODUCT COLLECTED IN SOAKIE.  
REPLACED SOAK-EASE, LOOKED  
ADDITIONAL 2 INCHES TO INCREASE  
RECOVERY.

MW-6: ~1.5" PRODUCT IN SKIMMER  
SKIMMER CATCHING ON EDGE OF  
WELL  
LOWEDED INTO WELL SEVERAL TIMES  
UNTIL ROPE WAS TAUGHT

MW-1: SOAKEASE HAD MINIMAL SATURATION  
REPLACE W/ NEW SOAKEASE.

No. of Product Drums Onsite: 1 - 7.5 GAL BUCKET

Drum capacity available: 7.25 GAL
