Re: **Third Quarter 2001 Monitoring Report**  
Connell Automobile Dealership  
3093 Broadway  
Oakland, California  
StID #469

MAR 01 2002

Dear Mr. Seery:

On behalf of Messrs. George Hill and Gordon Linden, and as required by the Alameda County Health Care Services Agency (ACHCSA), Cambria Environmental Technology, Inc. (Cambria) has prepared this quarterly monitoring report for the above-referenced site. This report satisfies the quarterly reporting requirements prescribed by Title 23 of the California Code of Regulations Article 3 Section 2652(d). The site background, third quarter 2001 activities and results, and anticipated fourth quarter 2001 activities are presented below.

## SITE BACKGROUND

Three underground storage tanks (USTs) which previously contained gasoline, diesel, and waste oil were removed from the subject site in December 1989. Soil and groundwater investigation has been ongoing since 1990. Between October 1996 and March 1998, operation of a soil vapor extraction (SVE) remediation system removed approximately 1,421 lbs of hydrocarbons. Manual removal of separate phase hydrocarbons (SPH) from site monitoring wells has been conducted periodically since 1991.

## THIRD QUARTER 2001 ACTIVITIES AND RESULTS

**Groundwater Monitoring:** Cambria monitored site groundwater following the sampling protocol described in Cambria's May 8, 2000 *Workplan Addendum* (Attachment A). On August 1, 2001 Cambria gauged monitoring wells MW-1, MW-4, MW-7, MW-8, MW-9, MW-13, MW-14, and MW-15, and inspected the wells for SPH. An obstruction in well MW-6 prevented both gauging and sampling during this event. Groundwater samples were collected from wells MW-4, MW-7, MW-8, MW-9, and MW-13. The samples were analyzed by a California Department of Health Services (DHS) certified analytical laboratory for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes (BTEX), methyl tertiary butyl ether (MTBE), TPH as diesel (TPHd), TPH as motor oil (TPHmo), and EPA List 8010 halogenated volatile

organic compounds (HVOCs). Samples from well MW-9 were additionally sampled for LUFT metals. The groundwater elevations, groundwater flow direction, and gradient are shown on Figure 1. The groundwater elevation, petroleum hydrocarbon, and HVOOC data are presented in Tables 1 and 2. Dissolved metals data is presented in Table 3, and SPH thicknesses and quantities removed are presented in Table 4. The analytical laboratory report is included as Attachment B. Field data sheets are included as Attachment C.

**Groundwater Flow Direction:** Based on the August 1, 2001 depth-to-water measurements, groundwater flowed northeastward with a gradient of approximately 0.055 ft/ft during the third quarter of 2001 (Figure 1). The groundwater flow direction is consistent with the historical local groundwater flow direction.

**Contaminant Distribution in Groundwater:** In general, monitoring results were consistent with past results for this site. SPH were detected in wells MW-1, MW-14, and MW-15. The primary contaminants of concern (COCs) in site groundwater are benzene, 1,2 dicholorethane (1,2-DCA), naphthalene, lead and nickel; these COCs are typically associated with releases from USTs containing gasoline, diesel, and/or motor oil. During this quarter the maximum benzene concentration detected in groundwater was 13,000 micrograms per liter (ug/l) in MW-4, the maximum 1,2-DCA concentration was 450 ug/l in MW-9, the maximum TPHd concentration was 42,000 ug/l in MW-4, and the maximum TPHmo concentration was 6,700 ug/l, also in MW-4 (Tables 1 and 2). The contaminant plumes are adequately defined crossgradient (south) and downgradient (east) of the former UST complex location by wells MW-7 and MW-13, respectively.

**Separate-Phase Hydrocarbon Removal:** During the site visit on August 1, 2001, Cambria inspected the passive SPH recovery device in well MW-6. An obstruction in well MW-6 prevented both the measurement and recovery of any SPH from this well during the August 1 event. Cambria did not recover any SPH from the site monitoring wells during third quarter of 2001. As of August 1, 2001, a total of approximately 924.95 lbs of SPH had been recovered since liquid-phase hydrocarbon removal began in December 1991. Table 4 presents the SPH thickness measurements, the amount of SPH removed from the wells during each site visit, and the cumulative mass of SPH removed from each well.

## ANTICIPATED FOURTH QUARTER 2001 ACTIVITIES

**Groundwater Monitoring and Reporting:** As required by the ACHCSA, Cambria will gauge site wells MW-1, MW-4, MW-6, MW-7, MW-8, MW-9, MW-13, MW-14, and MW-15 on a quarterly basis, collecting groundwater samples from MW-4, MW-7, MW-8, MW-9, and MW-13. During fourth quarter 2001, Cambria will analyze groundwater samples for TPHd, TPHmo, TPHg, BTEX, MTBE, EPA List 8010 HVOCS, semi-volatile organic compounds (SVOCs), lead, cadmium, chromium, zinc, and nickel (LUFT metals). Cambria will prepare a quarterly monitoring report that will include tabulated groundwater elevation and analytical data and a potentiometric surface map.

# C A M B R I A

February 13, 2002

***Separate-Phase Hydrocarbon Removal:*** Cambria will conduct monthly SPH recovery events. Proper functioning of the recovery devices in MW-1, MW-6, and MW-14 will be verified. Cambria will attempt to clear the obstruction in well MW-6. Collected SPH will be transferred to labeled, DOT-approved steel drums pending disposal or recycling.

***Feasibility Testing and Corrective Action Plan (CAP) Preparation:*** The *Feasibility Test Report* dated March 16, 2001 concluded that remediation would be feasible at the site and that the dissolved plume may not be stable. Although CAP preparation has been approved by the ACHCSA and the Fund, Cambria has requested that the ACHCSA confirm that CAP preparation is appropriate. Cambria has also requested an opportunity to meet with the ACHCSA to discuss required elements of a CAP for moving this site towards closure by the ACHCSA and the Regional Water Quality Control Board.

**Abbreviations and Notes:**

TOC Elev. (ft) = Top of casing elevation in feet above mean sea level

μg/l = micrograms per liter = parts per billion = ppb

TVH = Total Volatile Hydrocarbons

TPHg = Total petroleum hydrocarbons as gasoline

MTBE = Methyl tert-butyl ether

1,2-DCA = 1,2 Dichloroethane

HVOCs = Halogenated volatile organic compounds by EPA Method 8010

DCB = 1, 3 Dichlorobenzene

MCB = Chlorobenzene

DBCM = Dibromochloromethane

TCM = Chloroform = trichloromethane

ND = None detected above laboratory reporting limit, see laboratory report for individual reporting limits.

-- = Sample not analyzed

SPH = Free product encountered in well

<n = Chemical not present at a concentration in excess of detection limit shown

MW-1 was initially referred to as Sample 5.

\* = Suspect laboratory contamination contributing to test result.

\*\* = Fuel fingerprint analysis indicates MTBE is not present in the free product sample collected from this well.

\*\*\* = Duplicate sample sent to a different chemical laboratory.

1 = Sample exhibits fuel pattern which does not resemble standard

2 = Lighter hydrocarbons than indicated standard

3 = Presence of this compound confirmed by second column, however, the confirmation concentration differed from the reported result by more than a factor of two

4 = Detection may potentially be a false positive, to be checked during the next event.

5 = One or more of the following substances found: Acetone, 1,2-Dibromoethane, 1,3,5-Trimethylbenzene, 2-Chlorotoluene, 1,2,4-Trimethylbenzene, n-Butylbenzene, and Naphthalene. See laboratory results for details.

6 = Confirmed by GC/MS.

Connell Automobile Dealership, 3093 Broadway, Oakland, California

Well ID <i>TOC Elev. (ft)</i>	Sampling Date	Depth to water (ft)	Groundwater Elevation (ft)	TEH ←	TPHd	TPHmo	TPIIho	2-Methyl naphthalene μg/l	Naphthalene	Other SVOC's →
--------------------------------------	------------------	---------------------------	----------------------------------	----------	------	-------	--------	---------------------------------	-------------	-------------------

**Abbreviations and Notes:**

*TOC Elev. (ft)* = Top of casing elevation, surveyed to an arbitrary datum

TEH = Total extractable hydrocarbons

TPHd = Total petroleum hydrocarbons as diesel

TPHmo = Total petroleum hydrocarbons as motor oil

TPHho = Total petroleum hydrocarbons as hydraulic oil

SVOCs = Semi-volatile organic compounds

Other SVOC's = All other compounds analyzed by EPA Method 8270

μg/l = micrograms per liter = parts per billion = ppb

ND = None detected above laboratory reporting limit, see laboratory report for individual reporting limits

< n = Not detected above n μg/l

-- = Not analyzed/not available

\* = Duplicate sample sent to a different chemical laboratory

\*\* = Does not match diesel pattern

---

**Abbreviations and Notes:**

*TOC Elev. (ft)* = Top of casing elevation, surveyed to an arbitrary datum

-- = Not measured or not applicable

NM = product was being removed by vapor extraction at time of measurement.

1 = LPH removed by manual bailing

2 = LPH removed from well by absorbent sock

3 = LPH removed from well by passive skimmer

4 = vapor extraction system operating in well

5 = No product removed; skimmer adjusted incorrectly and filled with water.

Liquid-phase hydrocarbons (LPH) converted from volume to weight using the relation 1 gallon LPH= 6.1 pounds.

## McCAMPBELL ANALYTICAL INC.

110 2nd Avenue South, #D7, Pacheco, CA 94553-5560  
Telephone : 925-798-1620 Fax : 925-798-1622  
[p://www.mccampbell.com](http://www.mccampbell.com) E-mail: main@mccampbell.com

Cambria Environmental Technology 1144 65 <sup>th</sup> Street, Suite C Oakland, CA 94608	Client Project ID: #425-1580; Connell	Date Sampled: 08/01-08/02/01
		Date Received: 08/03/01
	Client Contact: Bob Schultz	Date Extracted: 08/07-08/08/01

**Gasoline Range (C6-C12) Volatile Hydrocarbons as Gasoline\*, with Methyl tert-Butyl Ether\* & RTEX\***

EPA methods 5030, modified 8015, and 8020 or 602; California RWQCB (SF Bay Region) method GCEID (5030)

\* water and vapor samples are reported in ug/L, wipe samples in ug/wipe, soil and sludge samples in mg/kg, and all TCLP and SPLP extracts in ug/L

\* cluttered chromatogram; sample peak coelutes with surrogate peak

\*The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified gasoline is significant; b) heavier gasoline range compounds are significant(aged gasoline?); c) lighter gasoline range compounds (the most mobile fraction) are significant; d) gasoline range compounds having broad chromatographic peaks are significant; biologically altered gasoline?; e) TPH pattern that does not appear to be derived from gasoline (?); f) one to a few isolated peaks present; g) strongly aged gasoline or diesel range compounds are significant; h) lighter than water immiscible sheen is present; i) liquid sample that contains greater than ~5 vol. % sediment; j) no recognizable pattern.

	Client P.O:	Date Analyzed: 08/03-08/06/01

**Diesel Range (C10-C23) and Oil-Range (C18+) Extractable Hydrocarbons as Diesel and Motor Oil\***

EPA methods modified 8015, and 3550 or 3510; California RWQCB (SF Bay Region) method GCFID(3550) or GCFID(3510)

Lab ID	Client ID	Matrix	TPH(d) <sup>+</sup>	TPH(mo) <sup>+</sup>	% Recovery Surrogate
74192	MW-4	W	42,000,d,h	6700	114
74193	MW-7	W	ND	ND	111
74194	MW-8	W	58,b	ND	115
74195	MW-9	W	460,d	ND	113
74196	MW-13	W	ND	ND	112
Reporting Limit unless otherwise stated; ND means not detected above the reporting limit	W	50 ug/L	250 ug/L		
	S	1.0 mg/kg	5.0 mg/kg		

\*water samples are reported in ug/L, wipe samples in ug/wipe, soil and sludge samples in mg/kg, and all TCLP / STLC / SPLP extracts in ug/L

\* cluttered chromatogram resulting in coeluted surrogate and sample peaks, or; surrogate peak is on elevated baseline, or; surrogate has been diminished by dilution of original extract.

\*The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified diesel is significant; b) diesel range compounds are significant; no recognizable pattern; c) aged diesel? is significant); d) gasoline range compounds are significant; e) medium boiling point pattern that does not match diesel (?); f) one to a few isolated peaks present; g) oil range compounds are significant; h) lighter than water immiscible sheen is present; i) liquid sample that contains greater than ~5 vol. % sediment.

DHS Certification No. 1644

LUFT Metals\*

EPA analytical methods 6010/200.7, 239.2<sup>+</sup>

\* water samples are reported in mg/L, soil and sludge samples in mg/kg, wipes in ug/wipe and all TCLP / STLC / SPLP extracts in mg/L

\* Lead is analysed using EPA method 6010 (ICP) for soils, STLC & TCLP extracts and method 239.2 (AA Furnace) for water samples

<sup>a</sup> EPA extraction methods 1311(TCLP), 3010/3020(water, TTLC), 3040(organic matrices, TTLC), 3050(solids, TTLC); STLC - CA Title 22

<sup>a</sup> DISTLC extractions are performed using STLC methodology except that deionized water is substituted for citric acid buffer as the extraction fluid. DISTLC results are not applicable to STLC regulatory limits.

\* surrogate diluted out of range; N/A means surrogate not applicable to this analysis.

\* reporting limit raised due to matrix interference

i) liquid sample that contains greater than 3

i) liquid sample that contains greater than ~2 vol. % sediment, this sediment is extracted with the liquid, in accordance with EPA methodologies and can significantly effect reported metal concentrations.

## CAMBRIA

## WELL SAMPLING FORM

Project Name:	Connell	Cambria Mgr:	BS	Well ID:	MW-9
Project Number:	425-1580	Date:	8-1-01	Well Yield:	-----
Site Address:	3093 Broadway Oakland, Ca	Sampling Method:	Well Diameter: 2" pvc		
		Disposable bailer	Technician(s): SG		
Initial Depth to Water:	20.02	Total Well Depth:	30.50	Water Column Height:	10.48
Volume/ft:	0.16	1 Casing Volume:	1.67	3 Casing Volumes:	5.01
Purging Device:	Disposable bailer	Did Well Dewater?	no	Total Gallons Purged:	5
Start Purge Time:	14:10	Stop Purge Time:	14:19	Total Time:	9mins

1 Casing Volume = Water column height x Volume/ ft.

Well Diam.	Volume/ft (gallons)
2"	0.16
4"	0.65
6"	1.47

Time	Casing Volume	Temp. C	pH	Cond. us	Comments
