Dear Mr. Hwang:

On behalf of Messrs. George Hill and Gordon Linden, Cambria Environmental Technology, Inc. (Cambria) has prepared this *Groundwater Monitoring Report – Third Quarter 2003* for the above-referenced site. Presented in this report are the third quarter 2003 activities and anticipated fourth quarter 2003 activities.

If you have any questions or comments please call me at (510) 420-3307.

Sincerely,

Cambria Environmental Technology, Inc.

Mary C. Holland-Ford, R.G.
Project Geologist

ASHCSA Case No. 469
Cambria Project #425-1580

November 21, 2003

INTRODUCTION

As required by the Alameda County Health Care Services Agency (ACHCSA), Cambria Environmental Technology, Inc. (Cambria) has prepared this *Groundwater Monitoring Report - Third Quarter 2003* for the above-referenced site (Figure 1). Described below are the third quarter 2003 monitoring activities and results and the anticipated fourth quarter 2003 activities.

THIRD QUARTER 2003 ACTIVITIES

Monitoring Activities

Field Activities: On August 5, 2003, Cambria gauged and inspected all groundwater monitoring wells for separate-phase hydrocarbons (SPH) (Figure 1). Groundwater samples were collected from wells MW-4, MW-7, MW-8, MW-9, and MW-13 as described by the well sampling protocol in Appendix A. Wells MW-2, MW-3, MW-5, MW-10, and MW-11 are no longer a part of the well sampling protocol due to the absence of hydrocarbons and/or redundant locations. Wells MW-1, MW-6, MW-14 and MW-15 were not sampled due to the presence of SPH in the wells. Field data sheets are presented in Appendix B. The well gauging data has been submitted to the Geotracker database. See Appendix D for the electronic delivery confirmations.

Sample Analysis: Groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg), TPH as diesel (TPHd), TPH as motor oil (TPHmo) by EPA Method 8015C, benzene, toluene, ethylbenzene, xylenes (BTEX), methyl-tertiary butyl ether (MTBE) by EPA Method 8021B, and halogenated volatile organic compounds (HVOCs) by EPA Method 8021B. Dissolved oxygen was also measured in all the wells that were sampled. Laboratory analyses were performed by McCampbell Analytical of Pacheco, California. Laboratory analytical results are shown in Tables 1, 2, and 3, and summarized on Figure 1. The laboratory analytical report and chain of custody are included in Appendix C. The groundwater analytical results have been submitted to the Geotracker database. See Appendix D for the electronic delivery confirmations.

Groundwater Monitoring Report – Third Quarter 2003
Connell Automobile Dealership
Oakland, California
November 21, 2003

Monitoring Results

Groundwater Flow Direction: Based on depth-to-water measurements collected on August 5, 2003, groundwater beneath the site generally flows toward the northeast with a gradient of 0.100 ft/ft (Figure 1). This groundwater gradient is consistent with previous quarters. Depth to water and groundwater elevation data are presented in Table 1.

Contaminant Distribution in Groundwater: In general, analytical results were consistent relative to the previous quarter. SPH were measured or observed in wells MW-1, MW-6, MW-14, and MW-15 (sheen). Hydrocarbon concentrations were detected in three of five wells that were sampled. The maximum TPHg concentrations were detected in well MW-4 at 110,000 micrograms per liter ($\mu\text{g}/\text{L}$). The maximum benzene was detected in well MW-4 at 13,000 $\mu\text{g}/\text{L}$. The maximum TPHd concentration was detected in well MW-4 at 6,600 $\mu\text{g}/\text{L}$. No HVOCS were detected except for low concentrations of 1,2-dichloroethane in wells MW-4, MW-8, and MW-9, which are likely related to the gasoline release.

Corrective Action Activities

Separate-Phase Hydrocarbon Removal: Cambria conducted SPH removal activities on July 24, August 5, and September 12, 2003. Cambria removed a total of 0.151 gallons of SPH during this quarter from wells MW-1, MW-6, MW-14, and MW-15. A total of 152.87 gallons of SPH have been removed since SPH removal activities began in December 1991. Table 3 presents the SPH thickness measurements, the amount of SPH removed from the wells, and the cumulative volume of SPH removed.

ANTICIPATED FOURTH QUARTER 2003 ACTIVITIES

Monitoring Activities

Cambria will gauge all wells, check wells for SPH, and collect groundwater samples from all wells not containing SPH. Groundwater samples will be analyzed for TPHg and TPHd (with silica gel cleanup) by modified EPA Method 8015C, and BTEX and MTBE by EPA Method 8021B. Cambria will summarize groundwater monitoring and corrective action activities in the *Groundwater Monitoring Report - Fourth Quarter 2003*.

C A M B R I A

Groundwater Monitoring Report – Third Quarter 2003
Connell Automobile Dealership
Oakland, California
November 21, 2003

Corrective Action Activities

Cambria will continue to perform monthly SPH recovery events by hand-bailing all wells with measurable SPH.

Table 1. Groundwater Elevation and Analytical Data: Volatile Hydrocarbons and HVOCs

Connell Automobile Dealership, 3093 Broadway, Oakland, California

Well ID	Sampling Date	Depth to Groundwater (ft)	Groundwater Elevation (ft)	TVH/TPHg ($\mu\text{g/L}$)	Benzene ($\mu\text{g/L}$)	Toluene ($\mu\text{g/L}$)	Ethylbenzene ($\mu\text{g/L}$)	Xylenes ($\mu\text{g/L}$)	MTBE ($\mu\text{g/L}$)	1,2-DCA ($\mu\text{g/L}$)	Other HVOCs ($\mu\text{g/L}$)
Trip Blank	8/1/2001	--	--	<50	<0.5	<0.5	<0.5	<0.5	<5.0	--	--
	11/5/2001	--	--	<50	<0.5	<0.5	<0.5	<0.5	<5.0	--	--
	2/13/2002	--	--	<50	<0.5	<0.5	<0.5	<0.5	<5.0	--	--

Abbreviations and Notes:

TOC Elev. (ft) = Top of casing elevation in feet above mean sea level

MW-1 was initially referred to as Sample 5.

$\mu\text{g/L}$ = micrograms per liter = parts per billion = ppb

* = Suspect laboratory contamination contributing to test result.

TVH = Total Volatile Hydrocarbons

** = Fuel fingerprint analysis indicates MTBE is not present in the free product sample collected from this well.

TPHg = Total petroleum hydrocarbons as gasoline

*** = Duplicate sample sent to a different chemical laboratory.

MTBE = Methyl tert-butyl ether

1 = Sample exhibits fuel pattern which does not resemble standard

1,2-DCA = 1,2 Dichloroethane

3 = Presence of this compound confirmed by second

HVOCs = Halogenated volatile organic compounds by EPA Method 801C

2 = Lighter hydrocarbons than indicated standard column, however, the confirmation concentration differed from the reported result by more than a factor of two

DCB = 1, 3 Dichlorobenzene

4 = Detection may potentially be a false positive,

MCB = Chlorobenzene

to be checked during the next event.

DBCM = Dibromochloromethane

5 = One or more of the following substances found: Acetone, 1,2-Dibromoethane, 1,3,5-Trimethylbenzene, 2-Chlorotoluene, 1,2,4-Trimethylbenzene, n-Butylbenzene, and Naphthalene. See laboratory results for details.

TCM = Chloroform = trichloromethane

6 = Confirmed by GC/MS.

ND = None detected above laboratory reporting limit, see laboratory report

for individual reporting limits.

-- = Sample not analyzed

SPH = Separate-phase hydrocarbons encountered in well

<n = Chemical not present at a concentration in excess of detection

limit shown

a = Unmodified or weakly modified gasoline is significant

f = One to a few isolated non-target peaks present

	8/5/2003	24.05	70.71	--	SPH (sheen)	--	--	--	--

Abbreviations and Notes:

TOC Elev. (ft) = Top of casing elevation, surveyed to an arbitrary datum

TEH = Total extractable hydrocarbons

TPHd = Total petroleum hydrocarbons as diesel

TPHmo = Total petroleum hydrocarbons as motor oil

SVOCs = Semi-volatile organic compounds

Other SVOC's = All other compounds analyzed by EPA Method 8270

µg/l = micrograms per liter = parts per billion = ppb

ND = None detected above laboratory reporting limit, see laboratory report for individual reporting limits

ND* = not detected except for benzoic acid 74; creosol: 68

< n = Not detected above n ug/l

-- = Not analyzed/not available

* = Duplicate sample sent to a different chemical laboratory

** = Does not match diesel pattern

Total SPH Removed (gallons): 152.87

Abbreviations and Notes:

TOC Elev. (ft) = Top of casing elevation, surveyed to an arbitrary datum

-- = Not measured or not applicable

NM = Not Measured. Product was being removed by vapor extraction at time of measurement.

1 = SPH removed by manual bailing

2 = SPH removed from well by absorbent sock

3 = SPH removed from well by passive skimmer

4 = vapor extraction system operating in well

5 = No product removed; skimmer adjusted incorrectly.

APPENDIX A

Well Sampling Protocol

Cambria QM Well Sampling Protocol**Client:** Connell Automobile Dealership**CAMBRIA**

Address	3093 Broadway	Cambria Project #	425-1580
City	Oakland	Cambria Project Manager:	MHF
Cross Street	Hawthorne	Sample Month:	B

General Notes: If measureable SPH present, do not sample - gauge only. MW-1 and MW-14 have soakease socks in wells. MW-6 has product skimmer. Remove product from soakease and skimmer. Drum onsite for SPH. (Note MW-12 does not exist)

APPENDIX B

Groundwater Monitoring Field Data

Product Removal Form Connell Automobile Dealership, Oakland, CA

By: J. Hilt Date: 7-24-03

Project and Task #: 425-1580-011

Well	Treatment	Time	Gallons Removed*	DTW/ DTP	Comments
MW-1	SoakEase	6:30	10ml	23.19 23.14	
MW-6	Skimmer	7:15	100ml skimmer 150ml	24.11 24.04	
MW-14	SoakEase	7:55	10ml	23.10 23.08	

* If SoakEase is removed, wring out used sock into bucket and estimate vol. removed. Saturated socks theoretically hold about 1 quart (0.25 gal) of product. Skimmer receptacle holds about $\frac{1}{2}$ quart (0.14 gal) of product.

Notes

No. of Product Drums Onsite: 1

Drum capacity available: nearly cap'ly

August 13, 2003

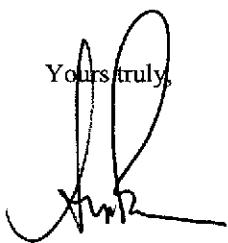

Dear Mary:

Enclosed are:

- 1). the results of **5** analyzed samples from your **#425-1580/119; Connell project**,
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Yours truly,

Angela Rydelius, Lab Manager

Gasoline Range (C6-C12) Volatile Hydrocarbons as Gasoline with BTEX and MTBE*

Extraction method: SW5030B

Analytical methods: SW8021B/8015Cm

Work Order: 0308065

* water and vapor samples and all TCLP & SPLP extracts are reported in ug/L, soil/sludge/solid samples in mg/kg, wipe samples in ug/wipe, product/oil/non-aqueous liquid samples in mg/L.

cluttered chromatogram: sample peak coelutes with surrogate peak

+The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified gasoline is significant; b) heavier gasoline range compounds are significant(aged gasoline?); c) lighter gasoline range compounds (the most mobile fraction) are significant; d) gasoline range compounds having broad chromatographic peaks are significant; biologically altered gasoline?; e) TPH pattern that does not appear to be derived from gasoline (stoddard solvent / mineral spirit?); f) one to a few isolated non-target peaks present; g) strongly aged gasoline or diesel range compounds are significant; h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~2 vol. % sediment; j) reporting limit raised due to high MTBE content; k) TPH pattern that does not appear to be derived from gasoline (aviation gas). m) no recognizable pattern.

	µg/L	µg/L	% Rec.	% Rec.	% RPD	% Rec.	% Rec.	% RPD	Low	High
Chlorobenzene	ND	10	101	105	4.47	96.8	101	4.20	70	130
1,1-Dichloroethene	ND	10	115	108	6.64	115	119	3.93	70	130
Trichloroethene	ND	10	106	98.9	6.55	102	110	7.46	70	130
%SS:	96.6	100	104	103	0.896	104	106	1.82	70	130

All target compounds in the Method Blank of this extraction batch were ND less than the method RL with the following exceptions:
NONE

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = $100 * (\text{MS-Sample}) / (\text{Amount Spiked})$; RPD = $100 * (\text{MS} - \text{MSD}) / (\text{MS} + \text{MSD}) * 2$.

* MS and / or MSD spike recoveries may not be near 100% or the RPDs near 0% if: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) if that specific sample matrix interferes with spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.
