INTRODUCTION

As required by the Alameda County Health Care Services Agency (ACHCSA), Cambria Environmental Technology, Inc. (Cambria) has prepared this *Groundwater Monitoring Report - Third Quarter 2004* for the subject site (Figure 1). Presented in the report are the third quarter 2004 activities and results, and the anticipated fourth quarter 2004 activities.

Table 1 contains water level measurements, calculated groundwater elevation data, and dissolved oxygen measurements. Table 1 also summarizes current and historical analytical results for purgeable hydrocarbons and volatile organic compounds. Table 2 presents additional hydrochemical data, including extractable hydrocarbons and semi-volatile organic compounds (SVOCs). Table 3 presents historical LUFT metals concentrations in groundwater data. Table 4 presents separate phase hydrocarbon (SPH) removal to-date data. Appendix A contains the well sampling protocol. Appendix B contains the field data sheets for this monitoring event. Appendix C contains the analytical laboratory report. Appendix D contains the GeoTracker delivery confirmation documentation.

THIRD QUARTER 2004 ACTIVITIES

Monitoring Activities

Field Activities: On August 19, 2004, Cambria gauged depth-to-water groundwater levels and inspected for SPHs in monitoring wells MW-1, MW-4, MW-6 through MW-9, and MW-13 through MW-15 (Figure 1). Groundwater samples were collected from monitoring wells MW-4, MW-7 through MW-9, and MW-13 in accordance with the well sampling protocol in Appendix A.

Prior to sampling, groundwater levels and SPH thickness were gauged/measured in the wells within approximately 45 minutes to evaluate groundwater elevation and flow patterns at the site. To facilitate groundwater sampling, Cambria purged approximately three well-casing volumes of

groundwater prior to sampling. Cambria recorded groundwater pH, conductivity, and temperature, and evaluated reading stabilization. Groundwater samples were collected using clean, disposable bailers and were decanted into the appropriate containers supplied by the analytical laboratory. Samples were labeled, placed in protective foam sleeves, stored on crushed, water-based ice at or below 4 degrees Celsius and transported under chain-of-custody to the laboratory. Field data sheets are presented as Appendix B. The well gauging data has been submitted to the GeoTracker database (Appendix D).

Sample Analysis: Groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg), and total petroleum hydrocarbons as diesel (TPHd) with silica gel cleanup by EPA Method 8015C; and benzene, toluene, ethylbenzene, xylenes (BTEX), and methyl tertiary-butyl ether (MTBE) by EPA Method 8021B. Dissolved oxygen was also measured in all of the wells that were sampled (Table 1). Laboratory analyses were performed by McCampbell Analytical of Pacheco, California. Laboratory analytical results are shown in Tables 1, 2, and 3, and summarized on Figure 1. The laboratory analytical report and chain of custody are included in Appendix C. The groundwater analytical results have been submitted to the GeoTracker database (Appendix D).

Monitoring Results

Groundwater Flow Direction: Based on depth-to-water measurements collected on August 19, 2004, groundwater beneath the site generally flows toward the northeast with a gradient of 0.092 feet/foot (Figure 1). This groundwater gradient is consistent with previous quarters. Depth to water and groundwater elevation data are presented in Table 1.

Hydrocarbon Distribution in Groundwater: SPH were detected in wells MW-1, MW-6, MW-14, and MW-15, ranging from a sheen to 0.38 feet in thickness. Hydrocarbon concentrations were detected in three of the five sampled wells. The maximum TPHg, TPHd, and benzene concentrations were detected in well MW-4 at 92,000 micrograms per liter ($\mu\text{g}/\text{L}$), 19,000 $\mu\text{g}/\text{L}$, and 9,500 $\mu\text{g}/\text{L}$, respectively. No MTBE was detected in the sampled wells.

Corrective Action Activities

Separate-Phase Hydrocarbon Removal: Cambria conducted SPH removal activities on July 29, August 6, August 19 and September 3, 2004. Cambria removed a total of 1.53 gallons of SPH during this quarter from wells MW-1, MW-6, and MW-14. Approximately 154.96 gallons of SPH have been removed since SPH removal activities began in December 1991. Table 4 presents the SPH thickness measurements, amount of SPH removed from the wells, and cumulative volume of SPH removal.

Abbreviations and Notes:

TOC Elev. (ft) = Top of casing elevation, surveyed to an arbitrary datum (measured in feet)

µg/L = micrograms per liter = parts per billion = ppb

-- = Not measured or not analyzed

ND = Not detected above laboratory reporting limit, see laboratory report for individual reporting limits

SPH = Separate-phase hydrocarbons encountered in well (value in parentheses is thickness in feet)

TVH = Total Volatile Hydrocarbons

TPHg = Total petroleum hydrocarbons as gasoline by modified EPA Method 8015; value in parentheses by EPA Method 8260

Benzene, toluene, ethylbenzene, and xylenes by EPA Method 8021B; value in parentheses by EPA Method 8260

MTBE = Methyl tertiary butyl ether by EPA Method 8021B; values in parentheses by EPA Method 8260

See laboratory analytical reports for notes.

1,2-DCA = 1,2 Dichloroethane by EPA Method 8010

HVOCs = Halogenated volatile organic compounds by EPA Method 8010

DCB = 1, 3 Dichlorobenzene

MCB = Chlorobenzene

DBCM = Dibromochloromethane

TCM = Chloroform = trichloromethane

DO = Dissolved oxygen, measured in the field.

<n = Chemical not present at a concentration in excess of detection limit shown.

* = Suspect laboratory contamination contributing to test result.

** = Fuel fingerprint analysis indicates MTBE is not present in the free product sample collected from this well.

*** = Duplicate sample sent to a different chemical laboratory.

1 = Sample exhibits fuel pattern which does not resemble standard

2 = Lighter hydrocarbons than indicated standard

3 = Presence of this compound confirmed by second column, however, the confirmation concentration differed from the reported result by more than a factor of two.

4 = Detection may potentially be a false positive, to be checked during the next event.

5 = One or more of the following substances found: Acetone, 1,2-Dibromoethane, 1,3,5-Trimethylbenzene, 2-Chlorotoluene, 1,2,4-Trimethylbenzene, n-Butylbenzene, and Naphthalene.

See laboratory results for details.

6 = Confirmed by GC/MS.

Abbreviations and Notes:

TOC Elev. (ft) = Top of casing elevation, surveyed to an arbitrary datum (measured in feet)

SPH = Separate-phase hydrocarbons

-- = Not measured or not applicable

NM = Not Measured. Product was being removed by vapor extraction at time of measurement.

1 = SPH removed by manual bailing

2 = SPH removed from well by absorbent sock

3 = SPH removed from well by passive skimmer

4 = Vapor extraction system operating in well

5 = No product removed; skimmer adjusted incorrectly.

1. Per the May 3, 1999, ACHCSA letter to Messrs. Hill and Linden, monitoring wells MW-2, MW-3, MW-5, MW-10, and MW-11 were dropped from the monitoring program. 2. To simplify the protocol, LUFT Metals will be analyzed annually (first quarter) for all sampled wells. 3. For cost control purposes, Cambria has reduced the frequency for HVOC sample analysis for the cross/downgradient wells from quarterly to annually. This is the only deviation from the approved monitoring program. If the County does not concur with this modification, please request resumption of quarterly analysis for HVOCs by EPA Method 8010 for the select cross/downgradient wells.

Gasoline Range (C6-C12) Volatile Hydrocarbons as Gasoline with BTEX and MTBE*

Extraction method: SW5030B

Analytical methods: SW8021B/8015Cm

Work Order: 0408266

* water and vapor samples and all TCLP & SPLP extracts are reported in ug/L, soil/sludge/solid samples in mg/kg, wipe samples in $\mu\text{g}/\text{wipe}$, product/oil/non-aqueous liquid samples in mg/L.

cluttered chromatogram; sample peak coelutes with surrogate peak.

+The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified gasoline is significant; b) heavier gasoline range compounds are significant(aged gasoline?); c) lighter gasoline range compounds (the most mobile fraction) are significant; d) gasoline range compounds having broad chromatographic peaks are significant; biologically altered gasoline?; e) TPH pattern that does not appear to be derived from gasoline (stoddard solvent / mineral spirit?); f) one to a few isolated non-target peaks present; g) strongly aged gasoline or diesel range compounds are significant; h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) reporting limit raised due to high MTBE content; k) TPH pattern that does not appear to be derived from gasoline (aviation gas). m) no recognizable pattern; n) TPH(g) range non-target isolated peaks subtracted out of the TPH(g) concentration at the client's request.
