Subject: Addendum to Risk-Based Corrective Action
Tier-2 Analyses

Chevron Service Station No. 9-5542
7007 San Ramon Road
Dublin, California
Delta Project No. DG95-542

- fraction organic carbon again was not changed from % to fraction. Should be 2.9×10^{-3} in spreadsheet
- RBCA based on 10^{-5} risk - OK for commercial scenario
- Re-run RBCA for 10^{-6} risk, changing organic carbon, too, to determine if deal restriction is warranted.

- Do graphs of conc vs time vs GW²⁰⁰¹, to see if there is trend of decreasing conc at sites in 1st RBCA

- Address removal of PTHg conc in soil - Done for soil to 10%

what about at 22?

Dear Ms. Chu:

Enclosed please find an *Addendum to Risk-Based Corrective Action Tier-2 Analyses* for the subject site prepared by Delta Environmental Consultants. This report addresses the Alameda County Health Care Services concerns expressed in electronic and phone conversations conducted between December 2000 and February 2001.

If you have questions or comments regarding this report, please contact me at (916) 638-2765 or Tom Bauhs of Chevron at (925) 842-8898.

Sincerely,

DELTA ENVIRONMENTAL CONSULTANTS, INC.

**ADDENDUM TO RISK-BASED CORRECTIVE ACTION
TIER-2 ANALYSES**

1.0 INTRODUCTION

Delta Environmental Consultants, Inc. (Delta) has been authorized by Chevron Products Company (Chevron) to review investigative work conducted at Chevron Service Station No. 9-5542, located at 7007 San Ramon Road, Dublin, Alameda County, California (Figure 1) and to prepare an addendum to the *Site Closure Request Using Risk-Based Corrective Action Analysis and Appendix-B Guidelines* dated December 30, 2000, prepared by Delta. The addendum was prepared in response to electronic and telephone conversations conducted between December 2000 and February 2001 between Delta and the Alameda County Health Care Services (ACHCS) regarding clarification of data used in the Risk Based Corrective Action (RBCA) model.

The following is a list of action items requested by the Alameda County Health Care Services:

1. Do not use soil data from MW-2, MW-3, B4 or P1 through P6 because they are not within the source area.
2. Include soil data for Sidewall-1 through Sidewall-3 collected from tank excavation on February 1998, and from samples WoM at 8.5 and 10.5 feet bsg. These samples are within the source area.
3. Do not use groundwater data from monitoring wells MW-2 or MW-6. These wells are not within the hydrocarbon-impacted plume.
4. Highlight/bold non-default parameters. Where or how, were non-default parameters selected. In particular, ambient air velocity in mixing zone, fraction organic carbon, soil total porosity, volumetric water content in capillary and vadose zones, volumetric air content in capillary and vadose zones, net groundwater infiltration rate, saturated hydraulic conductivity, and fraction organic carbon in water bearing unit.
5. Use only metric units (use cm/yr or m/yr for net groundwater infiltration rate).
6. Volumetric water content in the vadose zone appears too high. The vadose zone number was the same as that in the capillary fringe. It is not expected that the vadose zone would have as

ADDENDUM to CORRECTIVE ACTION PLAN

Dublin, California

Delta Project No. DG95-442

Page 3

- much water as the capillary fringe. Oakland's RBCA used 0.25, and the RWQCB used 0.15 for this value. Please explain how you came up with 0.322.
7. The fraction organic carbon Delta used was 0.29. Whereas Oakland used 0.005 and RWQCB used 0.006. Please explain where your number 0.29 came from.
 8. Your evaluation of soil leaching to groundwater assumed that a receptor is 30,480 cm from the source. This should only be used if you are trying to determine if the fuel release would impact a drinking water source about 300 meters from the site when the plume has not stabilized. This is not the case at this site. The plume is stable at 7007 San Ramon. This pathway may not need to be evaluated, as the only complete pathways are volatilization to indoor and outdoor air for on- and offsite buildings.
 9. TPHg in soil should also be compared with the RWQCB's RBSLs (500ppm for residential, and 1000ppm for commercial scenarios) to determine risk and potential nuisance/odor. The RWQCB's numbers were determined using the Massachusetts' study.

2.0 REVISED RISK-BASED CORRECTIVE ACTION

The data for the risk-based corrective action analyses was modified to reflect revisions requested during conversations with ACHCS. These revisions are discussed as follows:

1. Soil samples collected from borings MW-2, MW-3, B4 or product line samples P1 through P6 were not used in calculating representative soil concentrations.
2. The soil samples collected from the sidewalls identified as Sidewall-1 through Sidewall-3 and samples from the former used oil tank basin identified as WoM-8.5 and WoM-10.5 were used to calculate representative soil concentrations.
3. The groundwater samples collected from monitoring wells MW-2 and MW-6 were removed from the analyses.

Dublin, California

Delta Project No. DG95-442

Page 4

4. The Groundwater Services, Inc. RBCA Tool Kit for Chemical Releases versions newer than version 1.01 do not allow non-default parameters to either be highlighted or placed in bold. Site specific data is tabulated in Table 1. A printout of each input screen is included in Appendix A.
5. Units of measurements were changed to metric.
6. During a hydrogeologic investigation conducted by Gettler-Ryan Inc. in June 1996, soil samples collected from borings B3 and B4 were submitted for geotechnical analyses. Soil samples were analyzed for dry/wet bulk density (gm/cc), percent total porosity, volumetric gas content, volumetric water content, Unified Soil Classification System soil type and percent fraction organic carbon.
7. Site specific geotechnical analytical results were used to modify the default parameters for dry bulk density (1.805 kg/L), percent total porosity (0.323), volumetric water content in capillary fringe (0.322) and vadose zone (0.322), volumetric air content in capillary zone (0.001) and vadose zone (0.001) and percent fraction organic carbon in soil (0.0029). The volumetric water content in the capillary fringe was kept at the default of 0.12, the volumetric air content in the capillary fringe was kept at the default of 0.203 and the fraction organic carbon was set to 0.0029, which is the average of the laboratory reported values (the value of 0.29 was inadvertently used in the previous RBCA for fraction of organic carbon because it was not converted to a percent value). A copy of the laboratory report for the geotechnical soil results is included in Appendix B.
8. Upon further evaluation, Delta agrees with ACHCS that the soil leaching groundwater pathway is not a complete pathway and therefore, has not been included in the revised RBCA. Complete exposure pathways for the site are groundwater volatilization to outdoor air (ambient), groundwater volatilization to indoor air, soil volatilization to ambient air and soil volatilization to indoor air. The exposure pathway for the surface soil exposure for construction work was added based on the Application of Risk-Based Screening Levels and Decision Making to Site with Impacted Soil and Groundwater (RWQCB, August 2000), which defines surface soil extending 3 meters below surface grade (or 10 feet). All

Delta Project No. DG95-442

Page 5

Representative concentrations were below their respective site-specific target levels (SSTLS) for each chemical of concern (COC).

9. Concentrations of total petroleum hydrocarbons (TPH) as gasoline in soil samples collected onsite between 1.5 feet and 10 feet below surface grade (bsg) ranged between 0.55 mg/kg to 18 mg/kg. These concentrations are below the Risk-Based Screening Levels (RBSLs) for residential and industrial/commercial land use which are 500 mg/kg and 1,000 mg/kg, respectively. Based on review of all soil samples collected at the site, impacted soil is primarily located below 10 feet bsg (3 meters). Residual concentrations of TPH as gasoline or TPH as diesel from the former unauthorized release do not appear to pose a significant odor or nuisance problem to future industrial or commercial land use. If excavation activities were to occur in the future in the vicinity of the former tank basin and product distribution lines, a risk management plan would be needed to identify potential risk and potential exposure to residual petroleum hydrocarbon constituents.

3.0 RECOMMENDATIONS

Active remedial action does not appear to be warranted at this time. Natural attenuation and passive biodegradation have shown a decrease in hydrocarbon concentrations over time and have shown to be best available technologies for remediating the remaining hydrocarbon impacted soil and groundwater at this site. Based on the information supplied in this report, Delta recommends a finding of "no further action" be issued for this site.

Not
Nelly

4.0 LIMITATIONS

The interpretations contained in this report represent our professional opinions and are based, in part, on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

IR _s	Ingestion rate of soil (mg/day)	100	200	50	100
SA	Skin surface area (dermal) (cm ²)	5800		2023	5800
M	Soil to skin adherence factor	1			
ET _{swim}	Swimming exposure time (hr/relevant)	3			
EV _{swim}	Swimming event frequency (events/yr)	12	12	12	
IR _{swim}	Water ingestion while swimming (L/hr)	0.05	0.5		
SA _{swim}	Skin surface area for swimming (cm ²)	23000		8100	
IR _{fish}	Ingestion rate of fish (kg/yr)	0.025			
F _{fish}	Contaminated fish fraction (unless)	1			

Surface Parameters	General	Construction	(units)
A	Source zone area	9.9E+6	(cm ²)
W	Length of source-zone area parallel to wind	2.5E+3	(m)
W _{perp}	Length of source-zone area parallel to GW flow	NA	(m)
U _{air}	Ambient air velocity in mixing zone	2.3E+2	(cm/s)
h _{az}	Air mixing zone height	2.0E+2	(m)
P _a	Areal particulate emission rate	NA	(g/cm ² /s)
L _{soil}	Thickness of affected surface soils	1.0E+2	(cm)

Surface Soil Column Parameters	Value	(Units)
D _{cap}	Capillary zone thickness	7.0E+1
h _v	Vadose zone thickness	5.1E+2
P _s	Soil bulk density	1.8E+0
L _c	Fraction organic carbon	1.2E-1 → 2.9 × 10 ⁻³
θ _t	Soil total porosity	3.2E-1
K _{sat}	Vertical hydraulic conductivity	8.3E+0
k _v	Vapor permeability	1.0E-8
L _{gw}	Depth to groundwater	5.8E+2
L _{top}	Depth to top of affected soils	1.0E+2
L _{base}	Depth to base of affected soils	5.8E+2
L _{soil}	Thickness of affected soils	4.8E+2
pH	Soil/groundwater pH	6.5E+0
θ _w	Volumetric water content	0.322
θ _a	Volumetric air content	0.001
capillary	vdwate	foundation

Complete Exposure Pathways and Receptors		On-site	Off-site 1	Off-site 2

CORE LABORATORIES

Sequoia Analytical
SA Project No. 9606885

CL File No. 57111-96172

Geotechnical Analysis Results

Sample ID	Bulk Density		Total Porosity %	Volumetric Gas $V_{\text{gas}}/V_{\text{bulk}}$	Volumetric Water $V_{\text{water}}/V_{\text{bulk}}$	Description
	Dry gm/cc	Wet gm/cc				
B3-6	1.65	2.03	38.0	0.0003	0.3796	Clay tan v silty
B3-12	1.87	2.17	30.2	0.0076	0.3016	Clay tan vf-fgr sd v silty
B3-16	1.87	2.17	29.9	0.0007	0.2982	Sand tan vf-fgr v silty v clay
B3-18	1.81	2.13	32.3	0.0005	0.3226	Silt tan vfgr sd v clay
B4-6	1.76	2.10	33.6	0.0010	0.3351	Clay tan vfgr sd v silty
B4-12	1.87	2.17	30.1	0.0004	0.3002	Sand tan vf-gran v silty v cly

Volumetric gas = gas volume/sample bulk volume

Volumetric water = water volume/sample bulk volume

Total porosity and bulk densities were determined as described in API RP-40, API Recommended Practice for Core-Analysis Procedure, 1960.

LABORATORY NARRATIVE

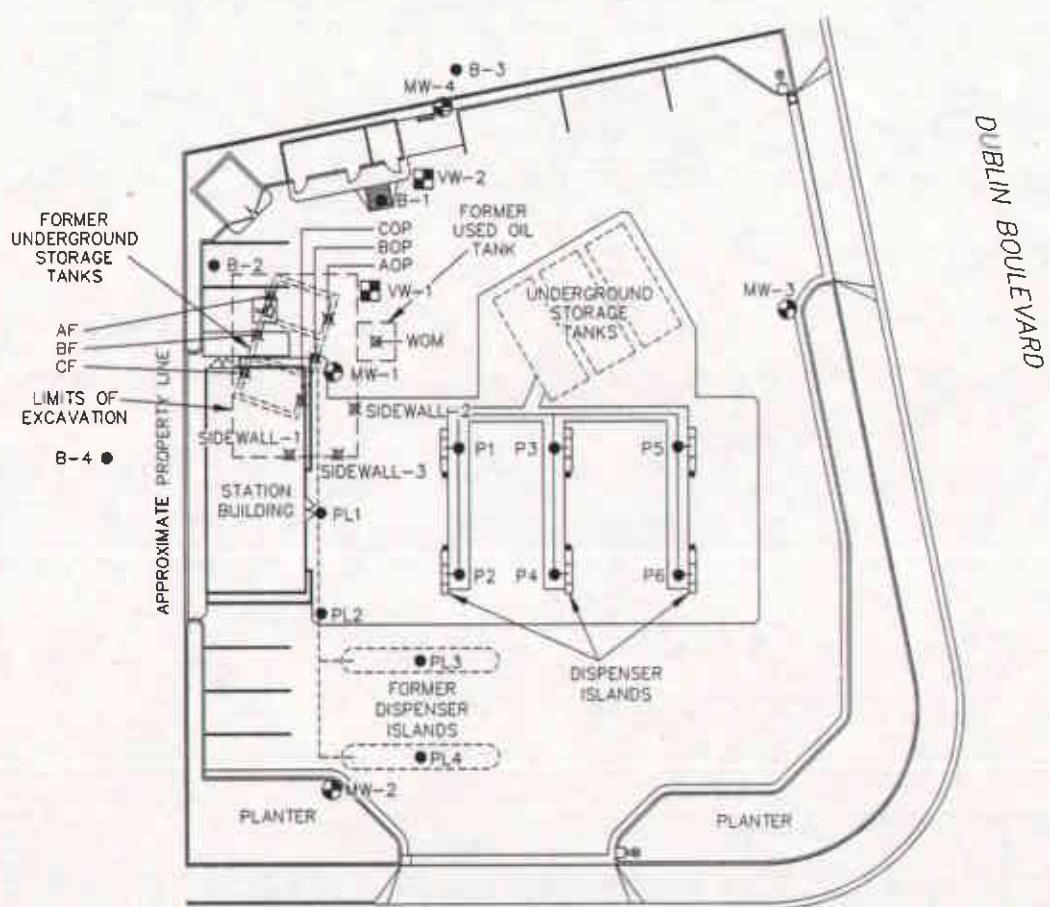

In order to properly interpret this report, it must be reproduced in its entirety. This report contains a total of _____ pages including the laboratory narrative, sample results, quality control, and related documents as required (cover page, COC, raw data, etc.).

For sample: #5 (TPHGBW) the detection limit was raised by a factor of 1000

POC note: these data were re-reported at a lower detection limit on 12/01/96.

TPH = Total petroleum hydrocarbons using EPA Method 8015 Modified, or DHS-LUFT Method.

Ft = Feet below surface grade.

mg/kg = milligrams per kilogram.

TOG = Total oil and grease.

VOC's = Volatile organic compounds.

Semi-VOC's = Semi volatile organic compounds.
