Hi Paresh,

We are presently scheduled to drill exploratory borings as identified in our most recent work plan beginning 9/2/08. This schedule assumes there will not be delays in obtaining site access. If there are any delays in obtaining site access I will let you know. We also have a work plan to submit today for soil gas sample collection to identify conditions for interim corrective measures, if necessary. The soil gas sample collection is scheduled to occur 9/5/08. The reports documenting these activities will be submitted within 5 weeks of the completion of field activities (10/10/08). I will be out of the office 8/7/08 returning to the office 8/13/08. Please let me know if you have any questions.

Best Regards,
Paul King
