 Dublin, California

Dear Ms. chu:

Attached for your review and comment is a copy of the *Subsurface Investigation and Groundwater Monitoring Report - Second Quarter 2003* for the above referenced site. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached document is true and correct.

As always, please feel free to contact me directly at (559) 645-9306 with any questions or concerns.

Sincerely,

Shell Oil Products US

A handwritten signature in cursive script that reads "Karen Petryna".

Re: **Subsurface Investigation and Groundwater Monitoring Report – Second Quarter 2003**
Shell-branded Service Station
11989 Dublin Road
Dublin, California
SAP Code 135243
Incident #: 98995328

Dear Ms. chu:

Cambria Environmental Technology, Inc. (Cambria) is submitting this *Subsurface Investigation and Groundwater Monitoring Report – Second Quarter 2003* on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell). The initial scope of work was proposed in Cambria's June 5, 2002 *Well Installation Work Plan*, and modified by Cambria's July 29, 2002 *Subsurface Investigation Work Plan Addendum*. The scope modification was requested by the Alameda County Health Care Services Agency (ACHCSA) in correspondence dated June 24, 2002. The ACHCSA provided final approval in correspondence dated August 30, 2002. Significant delays in implementing the work plan occurred because of difficulties in obtaining access to the offsite property. On April 1, 2003, Cambria supervised the installation of three downgradient soil borings to further characterize the extent of MTBE in groundwater.

Summaries of the site background, investigation procedures, investigation results, second quarter 2003 groundwater monitoring results, conclusions and recommendations are presented below.

Oakland, CA
Sonoma, CA
Portland, OR
Seattle, WA

SITE BACKGROUND

**Cambria
Environmental
Technology, Inc.**

270 Perkins Street
P.O. Box 259
Sonoma, CA 95476
Tel (707)935-4850
Fax (707)935-6649

Site Location: This operating Shell-branded service station is located at the southwest corner of the intersection of Dublin Boulevard and San Ramon Road in Dublin, California (Figure 1). The surrounding area is primarily commercial with retail businesses adjacent to the site. A Chevron service station is located northeast of the Shell station. Currently, three gasoline underground

C A M B R I A

storage tanks (UST) and one diesel UST are in use onsite, with associated piping and dispensers (Figure 2).

Soil and Groundwater Investigation Summary

June 1997 Dispenser and Piping Removal and Replacement: In June 1997, soil samples were collected from beneath each of the dispensers and product piping runs at the site during dispenser and piping replacement. Maximum detected concentrations of total petroleum hydrocarbons as gasoline (TPHg) and total petroleum hydrocarbons as diesel (TPHd) were 690 parts per million (ppm) and 12,000 ppm, respectively. The highest detected benzene and methyl tertiary butyl ether (MTBE) (by EPA Method 8020) concentrations during the same sampling event were 0.55 ppm and 8.9 ppm, respectively, both from beneath the center dispenser in the northern pump island.

August 1997 Tank Backfill Well Destruction: On August 8, 1997, six tank backfill wells were destroyed in accordance with permit #97433 issued by the Alameda County Flood Control and Water Conservation District Zone 7 (Zone 7). One tank backfill well (BW-7) still exists. Water was not encountered in the backfill wells at a maximum depth of 12 feet below grade (fbg).

November 1997 Subsurface Investigation: On November 19, 1997, Cambria advanced four soil borings (SB-1 though SB-4) at the site to define the extent of hydrocarbons in soil and groundwater. The maximum hydrocarbon concentrations in soil were 11 ppm TPHg, 300 ppm TPHd and 0.0051 ppm benzene in sample SB-3 from 25 fbg. The maximum MTBE concentration in soil (by EPA Method 8020) was 0.11 ppm in sample SB-2 at 20 fbg. A grab groundwater sample collected from SB-2 contained 470 parts per billion (ppb) TPHg, 4,900 ppb TPHd, 17 ppb benzene and 110 ppb MTBE. No groundwater was encountered in the other borings to the total explored depth of 41 fbg.

August 1998 Subsurface Investigation: On August 5, 1998, Cambria advanced two soil borings (also labeled SB-1 and SB-2; but designated by date and with alternate symbols on Figure 2) to evaluate soil and groundwater conditions in the assumed downgradient direction of the UST complex. Maximum concentrations detected in soil were 250 ppm TPHg and 2.8 ppm benzene from SB-2 at 30 fbg. Grab groundwater samples collected from borings SB-1 and SB-2 contained maximum TPHg, TPHd and MTBE (by EPA Method 8260) concentrations of 140,000 ppb, 54,000 ppb, 14,000 ppb, respectively. Benzene was below detection limits in grab groundwater samples from both borings.

January 1999 Subsurface Investigation: On June 8 and 9, 1999, Cambria installed three onsite groundwater monitoring wells (MW-1 though MW-3). The maximum TPHg concentration in

C A M B R I A

soil of 4.1 ppm was detected in the sample collected from well MW-3 at a depth of 25.5 fbg. The maximum TPHd and MTBE (by EPA Method 8260) concentrations in soil of 103 ppm and 1.14 ppm, respectively, were detected in MW-2 at a depth of 25.5 fbg. No benzene, toluene, ethylbenzene and xylenes (BTEX), hydrocarbons, or MTBE (by EPA Method 8020) were detected in soil samples collected from monitoring well MW-1 or in vadose zone soil samples collected from wells MW-2 and MW-3.

July 2001 Subsurface Investigation: On July 26, 2001, Cambria installed downgradient monitoring well MW-4 across San Ramon Road from the site. A soil sample collected at the soil-groundwater interface contained no TPHg, BTEX or MTBE.

Groundwater Depth and Flow Direction: The depth to groundwater at the site varies from 5.6 to 6.7 fbg in well MW-1 and from 18.7 to 26.6 fbg in wells MW-2 through MW-4. Groundwater flow direction has been consistently east and a groundwater gradient of 0.125 ft/ft was determined in Cambria's *Second Quarter 2001 Monitoring Report*. No apparent explanation for the discrepancy between depths-to-water in the wells at the site has been identified. Topography slopes slightly to the east.

Soil Lithology: The site is underlain by gravelly fill to approximately 2 fbg. The fill is underlain by clayey sands, silty clay and clayey silt to the maximum explored depth of 35 fbg.

Quarterly Groundwater Monitoring: Quarterly monitoring has been conducted at the site since July 1999. Maximum TPHg, TPHd, benzene and MTBE (by EPA Method 8260) concentrations in groundwater have been reported in well MW-2 at 7,130 ppb, 1,490 ppb, 125 ppb and 28,000 ppb, respectively. Groundwater samples collected from downgradient well MW-4 have contained up to 2,400 ppb TPHg and 8,600 ppb MTBE (by EPA Method 8260). No BTEX has been detected in well MW-4 since installation. Continued monitoring shows stable and decreasing concentration trends.

INVESTIGATION PROCEDURES

Cambria supervised the installation of three off-site soil borings on private property directly downgradient and east of the site across San Ramon Road – Coco's Restaurant (Figure 3). The soil borings were installed by Gregg Drilling Inc. (Gregg) of Martinez, California using a Geoprobe® direct push drill rig. Soil and groundwater sampling procedures are described in Cambria's *Subsurface Investigation Work Plan Addendum* dated July 29, 2002.

C A M B R I A

Permits:	A soil boring permit was obtained from the Alameda County Flood Control And Water District Zone 7 (Zone 7) Permit #23023). A copy of the drilling permit is included as Attachment A.
Drilling Date:	April 1, 2003.
Drilling Company:	Gregg (C-57 License #485165).
Personnel Present:	Stewart Dalie, Staff Scientist, Cambria Don Parsons, Driller, Gregg
Drilling Method:	2½-inch diameter direct push, Geoprobe®.
Number of Borings:	Three: SB-1 through SB-3 (Figure 3).
Boring Depths:	SB-1 and SB-2 were drilled to 36 fbg and hydropunched to 40 fbg. SB-3 was drilled to 32 fbg and hydropunched to 36 fbg (Attachment B).
Soil Sampling Method:	All soil borings were advanced and sampled continuously using a hydraulic push Geoprobe® drill rig using acetate liners. Refer to Cambria's Standard Field Procedures for Geoprobe® Sampling (Attachment C). Soil samples from borings SB-1, SB-2 and SB-3 were collected every 5-feet and at the capillary fringe, for potential chemical analyses.
Sediment Lithology:	Soil encountered in the borings consisted predominantly of asphalt and road base to 1 fbg, interbedded clay and silt to 36 fbg (Attachment B).
Groundwater Depths:	Groundwater was encountered at approximately 31 fbg in SB-1 and SB-2, and at 27 fbg in SB-3.
Groundwater sampling:	Grab groundwater samples were attempted from first encountered groundwater in all three borings; however, no recovery was achieved at borings SB-1 or SB-2. A grab groundwater sample was obtained from SB-3 at first encountered at approximately 27 fbg using a disposable bailer. Discrete

C A M B R I A

groundwater samples were collected from all three borings using the hydropunch method. Hydropunch groundwater was obtained from between 36 and 40 fbg in SB-1 and SB-2, and from between 32-36 fbg in SB-3.

Chemical Analyses:

Selected soil and groundwater samples were analyzed by State-certified laboratory STL San Francisco of Pleasanton, California for TPHg, BTEX, and MTBE using EPA Method 8260B (Attachment D). To characterize stockpiled drill cuttings from the borings for disposal purposes, four brass tubes of soil were collected, then composited and analyzed by Kiff Analytical LLC of Davis, California for TPHg, BTEX and MTBE using EPA Method 8260B, and for total threshold limit concentration lead (Attachment D).

Stockpile Soil Handling And Disposal:

Drill cuttings produced from the boring were wrapped in plastic sheeting, labeled and temporarily stockpiled on the Shell site. Approximately 0.10 tons of soil was transported by Manley and Sons Trucking Company of Sacramento, California to Forward Landfill in Manteca, California for disposal on May 9, 2003 (Attachment E).

Second Quarter 2003

Groundwater Sampling:

The site wells were sampled by Blaine Tech Services (Blaine) for the second quarter event on May 1, 2003. The Blaine report, which includes the historical tabulated groundwater data and laboratory report, is included as Attachment F. The groundwater flow direction is primarily to the east at a gradient of 0.08 feet per foot. Figure 4 includes the groundwater contours and chemical concentrations of benzene and MTBE for the May 1, 2003 event.

INVESTIGATION RESULTS

Analyte Results in Soil: No BTEX compounds were detected in any offsite soil samples collected during this investigation. TPHg was detected in one soil sample; SB-1-35' at 7.0 ppm. MTBE was detected in two soil samples; SB-1-35' and SB-2-35' at 0.0099 and 0.250 ppm, respectively. Analytical results for the soil samples are summarized in Table 1. The certified

C A M B R I A

analytical laboratory reports for this investigation are included as Attachment D. TPHg, benzene and MTBE concentrations are depicted on Figure 3, for reference.

Analyte Results in Groundwater: Four water samples were collected from the borings and analyzed. One grab sample from SB-3 at 27 fbg, and a discrete sample from each boring at depths of 36-40 fbg (SB-1 and SB-2) and 32-36 fbg (SB-3).

No BTEX were detected in any groundwater water sample collected during this investigation. TPHg and MTBE were detected in all four water samples, with concentrations up to 3,000 ppb of TPHg in SB-3-W2 and 38 ppb of MTBE in SB-1-W1. Analytical results for the groundwater samples are summarized in Table 2, and the certified analytical laboratory reports are included as Attachment D. The TPHg, benzene and MTBE results are depicted on Figure 3, for reference.

The second quarter monitoring event continues to indicate elevated concentrations of MTBE primarily at MW-2, with stable to decreasing concentrations in the other wells. The groundwater flow direction remains consistent with previous events. The gradient and contaminant concentrations are depicted on Figure 4.

CONCLUSIONS

The soil sample results collected during this investigation did not show any detectable BTEX impact in offsite soils. The sample results indicated minimal TPHg and MTBE impact to soil at 35 fbg, which is below the water table, and indicative of groundwater conditions, not soil.

The groundwater sample results collected during this investigation did not show any detectable BTEX impact to offsite groundwater. The concentrations of constituents reported in SB-3 are roughly similar to those in nearby monitoring well MW-4. The groundwater monitoring data indicates a decreasing trend at the location of well MW-4. MTBE is defined in groundwater to the east to a concentration of 38 ppb in grab groundwater from SB-1.

RECOMMENDATIONS

Because the MTBE concentrations in onsite well MW-2 remain elevated, Cambria recommends the performance of batch groundwater extraction (GWE) events using a vacuum truck. The batch GWE should effectively reduce the residual concentrations of MTBE and the downgradient concentrations will continue to decline.

C A M B R I A

SCHEDULE

Cambria proposes performing weekly batch GWE on well MW-2 beginning in June and extending for 8 weeks. Each event shall last approximately 6 hours, unless the well is dewatered, and recharge is insignificant. The third quarter groundwater monitoring event will be scheduled to occur no sooner than one week following the eighth batch GWE event. An evaluation of the effectiveness of this method and a tabulation of mass removed will be included in the third quarter groundwater monitoring report.

CLOSING

Please call Ana Friel at (707) 442-2700, if you have any questions or comments.

Dear Mr. Dalie:

Enclosed is drilling permit 23023 for a contamination investigation at 11989 Dublin Boulevard in Dublin for Shell Oil Products Company. Also enclosed are current drilling permit applications for your files.

Please note that permit conditions A-2 and G requires that a report be submitted after completion of the work. The report should include drilling and completion logs, location sketch, permit number and any analysis of the soil and water samples. Please submit the original of your completion report. We will forward your submittal to the California Department of Water Resources.

If you have any questions, please contact me at extension 235 or Matt Katen at extension 234.

Sincerely,

A handwritten signature in black ink, appearing to read "Wyman Hong".

PERMIT CONDITIONS

Circled Permit Requirements Apply

A. GENERAL

1. A permit application should be submitted so as to arrive at the Zone 7 office five days prior to proposed starting date.
2. Submit to Zone 7 within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report or equivalent for well projects, or drilling logs and location sketch for geotechnical projects.
3. Permit is void if project not begun within 90 days of approval date.

B. WATER SUPPLY WELLS

1. Minimum surface seal diameter is four inches greater than the well casing diameter.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specially approved.
3. Grout placed by tremie.
4. An access port at least 0.5 inches in diameter is required on the wellhead for water level measurements.
5. A sample port is required on the discharge pipe near the wellhead.

C. GROUNDWATER MONITORING WELLS INCLUDING PIEZOMETERS

1. Minimum surface seal diameter is four inches greater than the well or piezometer casing diameter.
2. Minimum seal depth for monitoring wells is the maximum depth practicable or 20 feet.
3. Grout placed by tremie.

D. GEOTECHNICAL Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material. In areas of known or suspected contamination, tremied cement grout shall be used in place of compacted cuttings.
E. CATHODIC Fill hole above anode zone with concrete placed by tremie.
F. WELL DESTRUCTION See attached.

SPECIAL CONDITIONS: Submit to Zone 7 within 60 days after completion of permitted work the well installation report including all soil and water laboratory analysis results.

Standard Field Procedures for Geoprobe® Sampling

CAMBRIA

STANDARD FIELD PROCEDURES FOR GEOPROBE® SAMPLING

This document describes Cambria Environmental Technology's standard field methods for GeoProbe® soil and ground water sampling. These procedures are designed to comply with Federal, State and local regulatory guidelines. Specific field procedures are summarized below.

Objectives

Soil samples are collected to characterize subsurface lithology, assess whether the soils exhibit obvious hydrocarbon or other compound vapor odor or staining, estimate ground water depth and quality and to submit samples for chemical analysis.

Soil Classification/Logging

All soil samples are classified according to the Unified Soil Classification System by a trained geologist or engineer working under the supervision of a California Registered Geologist (RG) or a Certified Engineering Geologist (CEG). The following soil properties are noted for each soil sample:

- Principal and secondary grain size category (i.e., sand, silt, clay or gravel)
- Approximate percentage of each grain size category,
- Color,
- Approximate water or separate-phase hydrocarbon saturation percentage,
- Observed odor and/or discoloration,
- Other significant observations (i.e., cementation, presence of marker horizons, mineralogy), and
- Estimated permeability.

Soil Sampling

GeoProbe® soil samples are collected from borings driven using hydraulic push technologies. A minimum of one and one half ft of the soil column is collected for every five ft of drilled depth. Additional soil samples can be collected near the water table and at lithologic changes. Samples are collected using samplers lined with polyethylene or brass tubes driven into undisturbed sediments at the bottom of the borehole. The ground surface immediately adjacent to the boring is used as a datum to measure sample depth. The horizontal location of each boring is measured in the field relative to a permanent on-site reference using a measuring wheel or tape measure.

Drilling and sampling equipment is steam-cleaned or washed prior to drilling and between borings to prevent cross-contamination. Sampling equipment is washed between samples with trisodium phosphate or an equivalent EPA-approved detergent.

Sample Storage, Handling and Transport

Sampling tubes chosen for analysis are trimmed of excess soil and capped with Teflon® tape and plastic end caps. Soil samples are labeled and stored at or below 4°C on either crushed or dry ice, depending upon local regulations. Samples are transported under chain-of-custody to a State-certified analytic laboratory.

CAMBRIA

Field Screening

After a soil sample has been collected, soil from the remaining tubing is placed inside a sealed plastic bag and set aside to allow hydrocarbons to volatilize from the soil. After ten to fifteen minutes, a portable GasTech® or photoionization detector measures volatile hydrocarbon vapor concentrations in the bag's headspace, extracting the vapor through a slit in the plastic bag. The measurements are used along with the field observations, odors, stratigraphy and ground water depth to select soil samples for analysis.

Grab Ground Water Sampling

Ground water samples are collected from the open borehole using bailers, advancing disposable Tygon® tubing into the borehole and extracting ground water using a diaphragm pump, or using a hydro-punch style sampler with a bailer or tubing. The ground water samples are decanted into the appropriate containers supplied by the analytic laboratory. Samples are labeled, placed in protective foam sleeves, stored on crushed ice at or below 4° C, and transported under chain-of-custody to the laboratory.

Duplicates and Blanks

Blind duplicate water samples are usually collected only for monitoring well sampling programs, at a rate of one blind sample for every 10 wells sampled. Laboratory-supplied trip blanks accompany samples collected for all sampling programs to check for cross-contamination caused by sample handling and transport. These trip blanks are analyzed if the internal laboratory quality assurance/quality control (QA/QC) blanks contain the suspected field contaminants. An equipment blank may also be analyzed if non-dedicated sampling equipment is used.

Grouting

If the borings are not completed as wells, the borings are filled to the ground surface with cement grout poured or pumped through a tremie pipe.

RESIDUAL MANAGEMENT PROCEDURE

ISSUED DATE: 08/01/01

CANCELS ISSUE:

ISSUED BY: LRR

RESIDUAL STREAM:

SOIL WITH DIESEL

VENDOR:

ALLIED-BPI

LOCATION:

**ALLIED WASTE - MANTeca,
9999 SOUTH AUSTIN ROAD
MANTeca, CA 95336**

CALIFORNIA - TRANSPORTATION AND REPAIR

TOTAL METALS - TLLC METALS

TLLC ON ALL TLLC METALS 10 TIMES STLC MAXIMUM

TLLC LEAD - > 13 MG/KG REQUIRES ORGANIC LEAD ANALYSIS

IF ANY TLLC TOTAL METAL IS > OR = TO 20 TIMES TCLP REGULATORY LEVELS, TCLP IS REQUIRED

TOTAL PETROLEUM HYDROCARBONS, METHOD 413.1 OR 8015 - DIESEL

AQUATIC BIOASSAY (FISH TOX) IS ONLY TO BE RUN ON SAMPLES > OR = TO 5000 PPM TPH. AQUATIC BIOASSAY (FISH TOX) = PART 800 OF STANDARD METHODS FOR THE EXAMINATION OF WATER AND WASTEWATER (15TH EDITION)

LABORATORY INSTRUCTIONS (MINIMUM GUIDELINES ONLY)

- ALTERNATE APPROVED TEST METHODS PER SW846 ARE ALSO ACCEPTABLE

- ALL REQUIRED TESTS ON COMPOSITE

- LABORATORY IS TO SUPPLY QC/QC INFORMATION WITH ALL ANALYTICAL REPORTS

- MAIL OR FAX ALL ANALYSIS TO THE CENTRALIZED RESIDUAL MANAGEMENT TEAM

Monitoring performed on May 1, 2003

Groundwater Monitoring Report 030501-RH-2

This report covers the routine monitoring of groundwater wells at this Shell-branded facility. In accordance with standard procedures that conform to Regional Water Quality Control Board requirements, routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated purge volume (if applicable), elapsed evacuation time (if applicable), total volume of water removed (if applicable), and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater (if applicable) is, likewise, collected and transported to the Martinez Refining Company.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL CONCENTRATIONS**. The full analytical report for the most recent samples and the field data sheets are attached to this report.

At a minimum, Blaine Tech Services, Inc. field personnel are certified on completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight-hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. Our activities at this site consisted of objective data and sample collection only. No interpretation of analytical results, defining of hydrological conditions or formulation of recommendations was performed.

Please call if you have any questions.

Yours truly,

Leon Gearhart
Project Coordinator

Abbreviations:

TPPH = Total petroleum hydrocarbons as gasoline by EPA Method 8260B; prior to July 13, 2001, analyzed by EPA Method 8015.

TEPH = Total petroleum hydrocarbons as diesel by modified EPA Method 8015.

BTEX = Benzene, toluene, ethylbenzene, xylenes by EPA Method 8260B; prior to July 13, 2001, analyzed by EPA Method 8020.

MTBE = Methyl-tertiary-butyl ether by EPA Method 8020.

TOC = Top of Casing Elevation

GW = Groundwater

DO = Dissolved Oxygen

ug/L = Parts per billion

ppm = Parts per million

MSL = Mean sea level

ft = Feet

<n = Below detection limit

n/n = Pre-purge/Post-purge DO Readings

NA = Not applicable

Dear Mr.Gearhart,

Attached is our report for your samples received on 05/01/2003 15:20

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 06/15/2003 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: tgranicher@stl-inc.com

Sincerely,

A handwritten signature in black ink, appearing to read "Tod Granicher". It is written in a cursive style with a long horizontal line extending from the end of the first name.

Tod Granicher
Project Manager
