ENVIRONMENTAL PROJECT QUARTERLY STATUS REPORT

DATE REPORT SUBMITTED: December 14, 1998
QUARTER ENDING: September 30, 1998

SERVICE STATION NO.: 720
ADDRESS: 1088 Marina Blvd., San Leandro, CA
COUNTY: Alameda

ULTRAMAR CONTACT: Terrence A. Fox **TEL. NO:** 209-583-3345

BACKGROUND:

In January 1987, three underground gasoline storage tanks and one waste oil tank were excavated and removed from two tank cavities. Samples collected from beneath the former tanks indicated that hydrocarbons were present in the soil. In March 1987, five monitoring wells (MW-1 through MW-5) were installed by Conoco. Hydrocarbons were detected in soil and ground-water samples collected from the wells with the highest concentrations being detected in the area of MW-4. In July 1987, four soil borings were drilled in the vicinity of MW-4 to further characterize the soil contamination in that area. TPH concentrations above 100 ppm were detected in each boring. The site has been on a monitoring program since June 1987.

In July 1990, the site was purchased by Ultramar Inc. from Conoco. The monitoring program has continued.

In August 1991, perform shallow ground water study as screening tool to locate wells.

In October 1991, installed three additional wells to further define the extent of the dissolved hydrocarbon plume.

In October 1993, performed a ground-water pump test, a vapor extraction test, and a air sparging test.

In May 1994, submitted Problem Assessment Report/Remedial Action Plan.

In December 1994, installed one additional monitoring well, six air sparging points, and one vapor extraction well.

A Member of the Ultramar Group of Companies

BEACON
#1 Quality And Service

In June 1997, began operation of vapor extraction system.

In July 1997, the ground water recovery system and the air sparging system began operation.

SUMMARY OF THIS QUARTER'S ACTIVITIES:

Performed quarterly monitoring on August 31, 1998. Continued to operate the vapor extraction and air sparging systems. The ground-water system did not operate during the quarter.

RESULT OF QUARTERLY MONITORING:

Monitoring data indicates that the benzene concentrations were not detected in MW-1, MW-3, MW-6, MW-7, and MW-8. Benzene concentrations were detected in MW-2, MW-4, MW-5, and MW-9.

The ground water extraction system has processed approximately 228,400 gallons of water. Approximately 1,728 pounds of hydrocarbons have been removed by the vapor extraction system.

PROPOSED ACTIVITY OR WORK FOR NEXT QUARTER:

<u>ACTIVITY</u>	<u>ESTIMATED COMPLETION DATE</u>
Continue quarterly monitoring program.	
Continue operation of the vapor extraction and air sparging remediation systems.

Subject: *Quarterly Ground Water Monitoring and
Remediation System Status Report, Third Quarter 1998*
Beacon Station No. 720
1088 Marina Boulevard
San Leandro, California
Delta Project No. D095-971

Dear Mr. Fox:

Delta Environmental Consultants, Inc. (Delta), has been authorized by Ultramar, Inc. (Ultramar), to perform quarterly ground water monitoring reporting for the subject site (Figure 1). The quarterly ground water monitoring is intended to evaluate the distribution of dissolved petroleum hydrocarbons in ground water beneath the site. This report summarizes ground water monitoring activities performed by Doulos Environmental Company (Doulos) at the site on August 31, 1998, and reports remediation system activities performed by Delta.

Ground Water Elevation Measurements, Flow Direction, and Hydraulic Gradient

Depth to ground water measurements were recorded by Doulos on August 31, 1998, in monitoring wells MW-1 through MW-9. The location of the wells are shown on Figure 2. On August 31, 1998, ground water was present between 10.85 (MW-6) and 13.16 (MW-8) feet below the top of the monitoring well casings. The ground water level decreased an average of 1.24 feet since the previous quarterly monitoring event on May 28, 1998. Ground water level data for the August 31, 1998, monitoring event is presented in Table 1. Ground water sampling information sheets recorded by Doulos are included in Enclosure A. Cumulative ground water level data reported previously by El Dorado Environmental, Inc. (El Dorado) are included in Enclosure B. The air sparging and soil vapor extraction (SVE) systems were operating. The ground water pumping system was turned off and was not operating during the August 31, 1998, sampling event.

The ground water elevation measurements recorded on August 31, 1998, were used to construct a ground water elevation contour map (Figure 3). The ground water table elevations suggest a flow direction off-site, generally toward the southwest with an average hydraulic gradient of approximately 0.01. Historically, ground water generally flows toward the southwest under non-pumping conditions.

Mr. Terrence A. Fox
Ultramar, Inc.

Page 2

Ground Water Analytical Results

Ground water samples were collected from monitoring wells MW-1 through MW-9 on August 31, 1998. Ground water samples were submitted to Kiff Analytical (Kiff), a California-certified laboratory in Davis, California, for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX), and methyl tertiary butyl ether (MTBE) by EPA Method 8020, and total petroleum hydrocarbons (TPH) as gasoline by EPA Method 8015 Modified. Ground water sampling information sheets for the third quarter 1998 sampling event are included in Enclosure A.

No free product or sheen was detected in the wells during the August 1998 sampling event. Benzene was reported in the ground water samples collected from monitoring wells MW-2, MW-4, MW-5 and MW-9 at concentrations of 9.3, 1.8, 200, and 240 micrograms per liter ($\mu\text{g}/\text{L}$). Benzene was not detected in monitoring wells MW-1, MW-3, and MW-6 through MW-8. Concentrations of all analytes in ground water samples collected from MW-6 through MW-8 were below the laboratory's reporting limits. A benzene isoconcentration map for the August 31, 1998 sampling event is included as Figure 4. Ground water analytical results for the samples collected during the August 31, 1998, monitoring event are summarized in Table 1. Cumulative ground water analytical results reported previously by El Dorado are included in Enclosure B. A copy of the certified laboratory analytical report for the third quarter 1998 sampling event with chain-of-custody documentation is included in Enclosure C.

Status of Ground Water Remediation, Soil Vapor Extraction, and Air Sparging Systems

The ground water treatment system consists of monitoring wells MW-4, MW-5, and MW-9, a 250-gallon surge tank, a diffused aeration tank (DAT), two transfer pumps, two 200-pound aqueous phase granular activated carbon (GAC) columns placed in series, a 500-gallon holding tank and a flow totalizer meter. Ground water is pumped from the recovery wells to the surge tank, and is then gravity fed to the DAT. The DAT strips the dissolved petroleum hydrocarbons from the ground water. From the DAT, the ground water is pumped through the two GAC columns in series to the holding tank where the treated ground water is pumped to the sanitary sewer. The GAC columns adsorb dissolved petroleum hydrocarbons that are not removed by the DAT. The effluent air stream from the DAT containing petroleum hydrocarbon vapors stripped from the ground water stream is routed through the SVE system prior to atmospheric discharge. The ground water system was turned off in March 1998 and was not operating during the August 31, 1998, monitoring event.

why
?

The current SVE system consists of monitoring wells MW-1 through MW-5, MW-8, and MW-9, SVE well VW-1, and the effluent vapor stream from the diffused aeration tank which are manifolded to a 250 standard cubic feet per minute vacuum blower, and two Calgon 600 pound vapor phase GAC columns which replaced a 250 standard cubic feet per minute EVAX catalytic oxidizer. The EVAX catalytic oxidizer was disconnected in February 1998 due to low TPH as gasoline vapor concentrations and the GAC columns were delivered during March 1998. The SVE system was restarted during April 1998. The air discharge is permitted under Bay Area Air Quality Management District (BAAQMD) permit to operate No. 25627.

The air sparging system consists of air sparging wells SP-1 through SP-6, a GAST Model No. P6066 compressor, and six air rotometers. The compressor injects air through the air rotometers and then into air sparging wells SP-1 through SP-6. Air sparging was installed to monitoring wells MW-5 and MW-9 on October 15, 1998, on a temporary basis.

Mr. Terrence A. Fox
Ultramar, Inc.
December 8, 1998
Page 3

The locations of the SVE well, monitoring wells, air sparging wells, and equipment compound are illustrated on Figure 2. The remediation equipment layout is illustrated on Figure 5, and the remediation system schematic is presented on Figure 6.

Delta collects monthly influent, mid-carbon, and effluent samples from the ground water treatment system during the months the system is operating and submits them to Kiff for analysis of BTEX and TPH as gasoline. Cumulative analytical results are summarized in Table 2, and copies of laboratory analytical reports for the third quarter 1998, are included in Enclosure D. **As of July 21, 1998, the ground water treatment system has processed and discharged approximately 228,850 gallons of water to the sanitary sewer. The ground water treatment system was shut down in March, 1998, and did not operate during the third quarter 1998, except during system sampling events.** The cumulative volume of ground water treated is summarized in Table 3.

During the operation of the SVE system with GAC, Delta collects monthly influent, mid-carbon, and effluent vapor samples. The samples were submitted to Kiff for analysis of BTEX and TPH as gasoline. Cumulative sampling results for air samples collected from the SVE system during its operation are summarized in Table 4. **As of October 22, 1998, the SVE system has extracted approximately 1,728 pounds of vapor equivalent gasoline.** Copies of laboratory analytical reports for the third quarter 1998 are included in Enclosure E.

Remarks/Signature

The interpretations contained in this report represent our professional opinions, and are based in part, on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

Delta recommends that a copy of this report be forwarded to:

Notes:

- 1) TPH-G = Total Petroleum Hydrocarbons as gasoline
- 2) Odor refers to petroleum hydrocarbon odor
- 3) All results are presented in parts per billion
- 4) Groundwater Technology, Inc., collected samples prior to February 1989
- 5) Du Pont Environmental Services collected samples from February 1989 through February 1991
- 6) Environmental Geotechnical Consultants, Inc. collected samples beginning in May 1991
- 7) ND = Non Detect
- 8) See analytical results for detection limits (Appendix B)

ENCLOSURE C

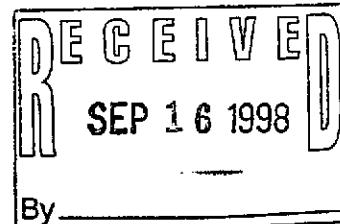

Ground Water Monitoring Analytical Results

Report Number : 12214

Date : 09/15/98

Richard Munsch
Delta Environmental Consultants, Inc.
3164 Gold Camp Drive, Suite 200
Rancho Cordova, CA 95670

Subject : 9 Water Samples
Project Name : Beacon 720
Project Number : 94-720-01

Dear Mr. Munsch,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Joel Kiff".
Joel Kiff

Project Number : D095-971

Dear Mr. Munsch,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Joel Kiff

Dear Mr. Munsch,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink. The signature appears to read "Joel Kiff". Below the signature, the name "Joel Kiff" is printed in a smaller, black, sans-serif font.
