

meeting 01/09/94

Attendees: Mr & Mrs Beck (RPs); Bill Uelter (Consultant);  
and Amy Leech.

Met w/ RPs and consultant to discuss a  
RBCA strategy for their site. Have them  
RBCA flow charts (How to get from initial  
site assessment to closure)

Mr. Uelter had run soil & gw cone.  
through GSI software. Reports generated  
were not very clearly defined. Told  
him final report must also include  
a written report explaining RBCA approach/  
rationale etc.

Suggested that he meet w/ M. Logan  
before submitting a final report to our  
office.

~~Bill~~ Mr. Uelter used gw data from MW-3.  
Told him this was not approp. since "hot"  
area (N-NW of pit) must be included.  
Either use July 1993 data from  
Louis Richardson or collect some current  
soil & gw data in this area.

Asked them to analyze for MTBE this next  
sampling event.

Have Beck's eg RBCA cases to read through  
to get an idea of how to apply to their site.

Told Bill Uelter, I would have Madhukar  
contact him to set up a meeting
