Subject: RE: Pending Closure Requests-Sites RO256 and RO233

Hi James,

I listed this as moving to semi-annual as a result of Resolution 2009-0042 (accessible in the "Geotracker Home" tab for the site). Downgradient wells do have the highest concentrations, so at this point in time I'd continue to recommend this recently reduced interval until I've had more of a chance to more fully review the site.

It would appear 1st and 3rd quarters might be the best quarters for sampling as these quarters generally have the highest detections (VH-1 and MW-2); however, you should also review the data to see if you are in agreement.

Hope this helps,

Mark Detterman

Subject: Pending Closure Requests-Sites RO256 and RO233

Hi Mark,

The recent SWRCB 2009-0042 letters reminded me that these two sites (RO256 and RO233) (Chevron 9-1740 and 9-4612, respectively) have pending closure requests under review (or to be reviewed) by ACEH and both appear to be solid, low-risk cases. Would it be appropriate to suspend GW monitoring until these documents are reviewed (they are dated 9/08 and 2/09)? I've noticed this has been done at other ACEH sites. If you could let me know I would appreciate it. Thanks.

Sincerely,

James P. Kiernan, P.E.
