I have reviewed the attached report dated April 30, 2014.

I agree with the conclusions and recommendations presented in the referenced report. The information in this report is accurate to the best of my knowledge and all local Agency/Regional Board guidelines have been followed. This report was prepared by AECOM, upon whose assistance and advice I have relied.

This letter is submitted pursuant to the requirements of California Water Code Section 13257(b)(1) and the regulating implementation entitled Appendix A pertaining thereto.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

Sincerely,

A handwritten signature in blue ink, appearing to read "T. Bishop".

Alameda, California 94502-6577

**Subject:** First Quarter 2014 Groundwater Monitoring Report  
Unocal No. 5781 (351640)  
3535 Pierson Street, Oakland, California  
Fuel Leak Case No. RO0000253

Dear Mr. Nowell,

On behalf of Chevron Environmental Management Company's (EMC's) affiliate Union Oil Company of California ("Union Oil"), AECOM is pleased to present the first quarter 2014 groundwater monitoring report for the site located at 3535 Pierson Street in Oakland, California (site) (**Figure 1**). The locations of the former and current site features are illustrated on **Figure 2**. Quarterly groundwater monitoring is conducted to evaluate the distribution of petroleum hydrocarbon constituents in groundwater beneath the site. Groundwater sampling was performed by Gettler-Ryan Inc. (Gettler-Ryan) of Dublin, California. This report summarizes sample results collected from wells associated with the site during the first quarter of 2014.

### Groundwater Monitoring Field Data

The depth to groundwater was measured for seven monitoring wells (MW-A and MW-4 through MW-9) at the site on February 24, 2014, and these depths were converted to groundwater elevations (**Table 1**). Copies of the groundwater gauging logs are included in **Attachment A**. Groundwater elevation data were used to construct a groundwater elevation contour map (**Figure 2**). The groundwater elevation data collected from well MW-A were not used in contouring because the well is screened in the deeper aquifer. The groundwater flow direction is to the northeast with a calculated average hydraulic gradient of approximately 0.04 feet per foot (**Figure 2**). The depth to groundwater at the site ranged from 12.85 to 17.33 feet below the top of well casings with calculated elevations ranging from 137.46 to 140.52 feet above mean sea level.

### Groundwater Sampling and Analytical Results

Groundwater samples were collected from monitoring wells MW-A, and MW-4 through MW-9 on February 24, 2014. The site wells historically have poor recharge so pre-purge samples are collected, and if the wells do not recharge in 2 hours, the pre-purge samples are submitted for analysis. After purging a minimum of three well volumes, only MW-A and MW-8 recharged within the 2-hour period and post-purge samples were submitted for analysis. Temperature, pH, and electrical conductivity readings were recorded during purging, and copies of those purge logs are presented in **Attachment A**. Laboratory analyses of the groundwater samples were performed by BC Laboratories, Inc. (BC Labs) of Bakersfield, California. The BC Labs analytical report dated March 12, 2014, is included as **Attachment B**. Groundwater samples were analyzed for the following based on historical trends at each monitoring well:

- Total petroleum hydrocarbons as diesel range organics (TPH-DRO) by method Luft/TPHd with silica gel cleanup;
- Total petroleum hydrocarbons as gasoline range organics (TPH-GRO) by Environmental Protection Agency (EPA) Method 8015B;
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA Method 8260B; and

- Fuel oxygenates, including methyl t-butyl ether (MTBE), t-amyl methyl ether (TAME), t-butyl alcohol (TBA), diisopropyl ether (DIPE), and ethyl t-butyl ether (ETBE), ethanol, 1,2-dibromomethane (EDB), and 1,2-dichloroethane (EDC) by EPA Method 8260B.

Analytical results are presented in **Table 1**, **Table 2**, and **Figure 3** for this quarterly groundwater monitoring event, the following presents a brief summary of the analytical sample results:

- TBA, ETBE, DIPE, TAME, EDB, EDC, and ethanol were not detected in any of the groundwater samples analyzed.
- TPH-DRO was detected for MW-5 at 1,700 micrograms per liter ( $\mu\text{g}/\text{L}$ ).
- TPH-GRO was detected for MW-5 at 3,900  $\mu\text{g}/\text{L}$ .
- MTBE was detected in the groundwater samples collected from MW-5, MW-6, and MW-8 at 1.7  $\mu\text{g}/\text{L}$ , 47  $\mu\text{g}/\text{L}$  and 1.1  $\mu\text{g}/\text{L}$ , respectively.
- Toluene, ethylbenzene, and total xylenes were detected in the groundwater sample collected from MW-5 at 4.5  $\mu\text{g}/\text{L}$ , 240  $\mu\text{g}/\text{L}$ , and 1,800  $\mu\text{g}/\text{L}$ , respectively. Historical concentrations of toluene, ethylbenzene, and total xylenes detected for MW-5 have shown an overall decreasing trend.

A summary of historical groundwater analytical data through February 2014 is presented in **Tables 3 through 5**.

Approximately 42 gallons of purge water was generated during the groundwater monitoring event. The purge water generated during sampling activities was transported by Clean Harbors Environmental Services to Evergreen Oil located in Newark, California.

During the fourth quarter of 2012, 0.39 feet of free product/light non-aqueous phase liquid (LNAPL) was observed in well MW-5. Free product/LNAPL has not been observed in MW-5 since that time.

## Conclusions and Recommendations

The sample results from the groundwater monitoring activities at the site indicate the following.

- Petroleum hydrocarbons were not detected in the groundwater samples collected from MW-A, MW-4, MW-7, and MW-9.
- MW-5 continues to show elevated petroleum hydrocarbon concentrations; however, the concentrations for the first quarter of 2014 were generally the lowest observed to date.
- MTBE was detected in the groundwater samples collected from MW-5, MW-6 and MW-8 at 1.7  $\mu\text{g}/\text{L}$ , 47  $\mu\text{g}/\text{L}$  and 1.1  $\mu\text{g}/\text{L}$ , respectively.

## Future Activities

### Groundwater Monitoring

AECOM will coordinate monitoring and sampling activities as per the established schedule. AECOM will submit quarterly groundwater monitoring and sampling reports.

### Additional Activity

AECOM will submit a conceptual site model (CSM) and Data Gap Work Plan for the site.

### Remarks/Signatures

The interpretations in this report represent AECOM's professional opinions and are based, in part, on the information supplied by Gettler-Ryan and BC Labs. These opinions are based on currently available

information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended. If you have any questions regarding this project, please contact James Harms at (916) 414-5800.

Sincerely,

James Harms  
Project Manager

-----------------	--------------	------	-------------	--------------	-------	-------------------	-------------------	-------------	-------------	-------------	-------------	----------

TPH-DRO analyzed by method Luft/TPHD with silica gel cleanup

TPH-GRO analyzed by Environmental Protection Agency Method 8015B

Free product correlates to light non-aqueous phase liquid

<# = Analyte not detected at or above indicated laboratory practical quantitation limit

ID = Identification

B = Benzene

-- = Not analyzed/applicable

TOC = Top of casing

T = Toluene

ft = Feet

E = Ethylbenzene

DTW = Depth to water

X = Total Xylenes

GWE = Groundwater elevation

TPH-DRO = Total Petroleum Hydrocarbons as Diesel/Diesel Range Organics

µg/L = Micrograms per liter

TPH-GRO = Total Petroleum Hydrocarbons as Gasoline/Gasoline Range Organics

LNAPL = Light Non-Aqueous Phase Liquid

ND = Non-detect

**NOTES:**

Oxygenate compounds analyzed by Environmental Protection Agency Method 8260B

<# = Analyte not detected at or above indicated laboratory practical quantitation limit

Free product correlates to light non-aqueous phase liquid

ID = Identification

-- = Not analyzed

$\mu\text{g/L}$  = Micrograms per liter

ND = Non-detect

## STANDARD OPERATING PROCEDURE - GROUNDWATER SAMPLING

Gettler-Ryan Inc. (GR) field personnel adhere to the following procedures for the collection and handling of groundwater samples prior to analysis by the analytical laboratory. All work is performed in accordance with the GR Health & Safety Plan and all client-specific programs. The scope of work and type of analysis to be performed is determined prior to commencing field work.

Prior to sampling, the presence or absence of free-phase hydrocarbons is determined using an interface probe. Product thickness, if present, is measured to the nearest 0.01 foot and is noted in the field notes. In addition, all depth to water level measurements are collected with a static water level indicator and are also recorded in the field notes, prior to purging and sampling any wells.

After water levels are collected and prior to sampling, if purging is to occur, each well is purged a minimum of three well casing volumes of water using pre-cleaned pumps (stack, peristaltic or Grundfos), or disposable bailers. Temperature, pH and electrical conductivity are measured a minimum of three times during the purging (additional parameters such as dissolved oxygen, oxidation reduction potential, turbidity may also be measured, depending on specific scope of work.). Purging continues until these parameters stabilize.

Groundwater samples are collected using disposable bailers. The water samples are transferred from the bailer into appropriate containers. Pre-preserved containers, supplied by analytical laboratories, are used. When pre-preserved containers are not available, the laboratory is instructed to preserve the sample as appropriate. Duplicate samples are collected for the laboratory to use in maintaining quality assurance/quality control standards, as directed by the scope of work. The samples are labeled to include the job number, sample identification, collection date and time, analysis, preservation (if any), and the sample collector's initials. The water samples are placed in a cooler, maintained at 4°C for transport to the laboratory. Once collected in the field, all samples are maintained under chain of custody until delivered to the laboratory.

The chain of custody document includes the job number, type of preservation, if any, analysis requested, sample identification, date and time collected, and the sample collector's name. The chain of custody is signed and dated (including time of transfer) by each person who receives or surrenders the samples, beginning with the field personnel and ending with the laboratory personnel.

A laboratory supplied trip blank accompanies each sampling set. The trip blank is analyzed for some or all of the same compounds as the groundwater samples.

As requested by Chevron Environmental Management Company, the purge water and decontamination water generated during sampling activities is transported by Clean Harbors Environmental Services to Seaport Environmental located in Redwood City, California.

# GETTLER - RYAN INC.

## Notes And Definitions

MDL	Method Detection Limit
ND	Analyte Not Detected at or above the reporting limit
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
A01	PQL's and MDL's are raised due to sample dilution.
Q03	Matrix spike recovery(s) is(are) not within the control limits.
