Re : Chevron Service Station No. 9-1740
6550 Moraga Avenue, Oakland, CA 94611

Ms. Susan Hugo :

Enclosed is Touchstone Developments Waste Oil Tank Removal Observation Report dated August 31, 1992 for the above referenced site.

Currently, a remediation work plan is being prepared for the remediation of waste oil contaminated soil along the sidewalls of the waste oil pit. This work plan will be forwarded to your office when it is completed.

If you have any questions or comments, please feel free to call me at (510) 842-8752.

Sincerely,

Chevron U.S.A. Products Co.

Kenneth Kan
Engineer

6550 Moraga Avenue
Oakland, California

Gentlemen:

INTRODUCTION

This report summarizes the field activities performed at the above referenced site (figure 1) during the recent removal of a 1000 gallon ~~waste oil tank~~. Excavation activities were performed by Gettler-Ryan, Inc. of Hayward, California. A Touchstone Developments (TD) representative was present on-site to observe the tank removal and to obtain soil samples from the tank excavation and associated stockpile. The soil sampling described in this report was performed ~~August 20, 1992~~ to comply with current State of California Regional Water Quality Control Board and Alameda County Environmental Health Division guidelines.

SITE DESCRIPTION

The site is currently operating as a Chevron Service Station at the corner of Moraga Avenue and Mountain Boulevard. The waste oil tank was located next to the ~~west wall~~ of the service station building (figure 1).

FIELD EXCAVATION ACTIVITIES

The waste oil tank was removed August 20, 1992. Tank removal was witnessed by Valida Holmes, a representative of the City of Oakland Fire Bureau, and Susan Hugo with Alameda Environmental Health Department. Also present was Kenneth Kan representing Chevron U.S.A. The excavation was approximately ~~10 feet wide by 12 feet long by 9 1/2 feet deep~~. An estimated total of ~~50 cubic yards of soil~~ was removed and placed on visqueen in one stockpile (figure 2). The tank was a ~~1000 gallon, single wall, fiberglass~~ tank with no obvious holes or leaks. There were signs of overspill on the top and sides of the tank at the fill end.

After waste oil tank removal, Gettler-Ryan, Inc. performed a limited amount of overexcavation. Overexcavation [REDACTED] limited due to the presence of [REDACTED] lateral along the south side, the station building on the east side, [REDACTED] enclosure along the northern side and a monitoring well next to the western side. Groundwater occurred at approximately [REDACTED] feet below grade. Sidewall samples were taken where overexcavation ceased. These samples were collected in the center of each sidewall (figure 3) between [REDACTED] and [REDACTED] feet below grade and designated [REDACTED] through WX-4. Approximately [REDACTED] cubic yards was generated during the tank removal, and approximately another [REDACTED] cubic yards during the overexcavation totaling approximately [REDACTED] cubic yards generated.

SOIL SAMPLING

Soil samples were collected by pushing a clean six-inch-long brass tube (2 inches in diameter) into the soil until completely full. The ends of each tube were covered with aluminium foil and sealed with plastic end caps. The sample was then labeled, placed in a cooler on ice, entered on a Chain-of-Custody form and transported to Superior Precision Analytical laboratory, a State-certified analytical laboratory located in Martinez, California.

Stockpile samples were collected by removing the top 6 to 12 inches of soil, then pushing the tube into the soil until completely full. This method was repeated again three times on the same stockpile. It was then handled as described above.

Excavation Sampling

Two excavation samples (WO-1 & WO-2) were collected from beneath each end of the waste oil tank at a depth of approximately [REDACTED] below grade (figure 2). The sample was collected by removing the top few inches of soil from the backhoe bucket then pushing the sampling tube into the soil. Both samples from the bottom and sidewalls were analyzed for Total Petroleum Hydrocarbons calculated as gasoline ([REDACTED]), Diesel ([REDACTED] diesel) and Oil ([REDACTED] oil), according to EPA Method 8015 (modified), Benzene, Toluene, Ethylbenzene and Xylenes ([REDACTED]) according to EPA Method 8020, Halogenated Volatile Organics (VOCs) according to EPA Method 8010, Total Oil and Grease (TOG) according to ASTM Method 5520F, ICAP Metals by atomic absorption (EPA Method 7000) and Semi-Volatile Organic Priority Pollutants according to EPA Method [REDACTED].

Stockpile Sampling

Four stockpile samples, ~~WS-1a-d~~, were collected from the stockpile of soil generated (figure 2). WS-1a-d represents approximately 50 cubic yards of soil. The four samples were composited in the laboratory and analyzed for Total Recoverable Petroleum Hydrocarbons according to EPA Method 418.1, Semi-Volatile Organic Priority Pollutants according to EPA Method 8270, Metals by atomic absorption/ICAP according to EPA Methods 7000/6010/200.7.

ANALYTICAL RESULTS

Excavation Results

Analytical laboratory results for samples WO-1 and WO-2 indicate 1.6 parts per million (ppm) and Non Detect (ND) respectively for TPH-gas, and 11 ppm and 13 ppm TPH-motor oil. Chemical analytical data for both excavation and stockpile samples are summarized in Table 1.

SOIL DISPOSITION

During waste oil tank removal and excavation activities, approximately 50 cubic yards of soil represented by composited sample WS-1 a-d was loaded and transported by Stamco Trucking to ~~the site~~ [REDACTED] Lockton, California for treatment.

If you have any questions, please call me at (707) 538-8818.

APPENDIX A: Analytical Laboratory Report and Chain-of-Custody Forms

August 25, 1992
Sample Log 4900

Jeff Monroe
Touchstone Development
3799 Wallace Rd.
Santa Rosa, CA 95404

Subject: Analytical Results for 7 Soil Samples
Identified as: Project # 1740-1 (Chevron 9-1740)
Received: 08/20/92

Dear Mr. Monroe:

Analysis of the sample(s) referenced above has been completed. This report is written to confirm results communicated on August 24, 1992 and describes procedures used to analyze the samples.

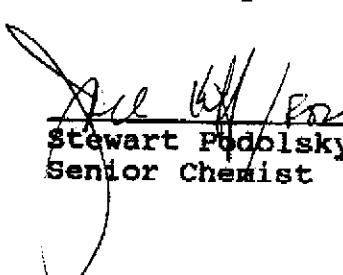

Sample(s) were received in brass sleeves that were sealed with PTFE sheets and plastic endcaps. Each sample was transported and received under documented chain of custody and stored at 4 degrees C until analysis was performed.

Sample(s) were analyzed using the following method(s):

- "BTEX" (EPA Method 8020/Purge-and-Trap)
- "TPH as Gasoline" (Modified EPA Method 8015/Purge-and-Trap)
- "TPH as Diesel, Motor Oil, Jet/Kerosene" (Mod. 8015/Extraction)
- "Halogenated Solvents" (EPA Method 8010)
- "Metals by Atomic Absorption/ICAP" (EPA Methods 7000/6010/200.7)
- "Oil and Grease" (ASTM Method 5520 E,F)
- "Total Recoverable Petroleum Hydrocarbons" (EPA 418.1)
- "Semi-Volatile Organic Priority Pollutants" (EPA Method 8270)

Please refer to the following table(s) for summarized analytical results and contact us at 916-757-4650 if you have questions regarding procedures or results. The chain-of-custody document is enclosed.

D System Monitoring Compound diluted out

S. Podolny

Stewart Podolny
Senior Chemist

August 25, 1992
Sample Log 4900

The following abbreviations and qualifiers may be present in the analytical reports to follow:

ug/L : Micrograms of target analyte in 1 Liter of sample.

mg/kg : Milligrams of target analyte in 1 kg of sample.

B : This data qualifier indicates that a method blank from the analytical batch contained this compound and the level found in the sample is within 5 times that level. Use data with caution.

C : This data qualifier indicates that the presence of the compound has been confirmed by GC/MS.

TCLP : Toxicity Characteristic Leaching Procedure

MS : Matrix Spike

MSD : Matrix Spike Duplicate

RPD : Relative Percent Difference (the difference between two values divided by the mean, expressed as a percentage).

% REC : Percent Recovery (the ratio between the measured value and the expected value for a spiked sample, expressed as a percentage).

< : Less than

> : Greater than

Fax copy of Lab Report and COC to Chevron Contact: Yes No

Chain-of-Custody-Record

Chevron U.S.A. Inc. P.O. BOX 5004 San Ramon, CA 94583 FAX (415)842-9591	Chevron Facility Number	9-1740	Chevron Contact (Name)	Renee, Ran
