Attention: Mr. Paul Hayes

Subject: August 1991 Quarterly Groundwater Monitoring Report  
Former Shell Station, 7194 Amador Valley Boulevard, Dublin, California

Dear Mr. Hayes:

This quarterly monitoring report summarizes the groundwater sampling and analyses performed during November 1991 for the subject site in the City of Dublin, Alameda County, California (Figure 1). Groundwater level data from a Unocal and a former Mobil located at the intersection of Amador Valley Boulevard and Village Parkway were collected in a joint sampling effort with other consultants and included in this report.

### Groundwater Sampling

RESNA Industries, Inc. (formerly Exceltech) collected groundwater samples from 12 groundwater monitoring wells on and adjacent to the site (Figure 2) in accordance with RESNA's groundwater sampling protocol.<sup>1</sup> The groundwater purged from the wells and equipment rinse water was placed in drums approved by the Department of Transportation. The drums were left on-site pending removal by a licensed hauler to the Shell refinery for recycling.

### Laboratory Analyses

The groundwater samples were transported to NET Pacific, Inc. (NET) located in Santa Rosa, California for analysis. NET, which is a state-certified laboratory, analyzed the samples for the presence of total petroleum hydrocarbons as gasoline (TPHG) and benzene, toluene, ethyl benzene, and total xylenes (BTEX).

### Summary of Laboratory Results

The results of the groundwater sampling and analyses are summarized in Table 1. The analytical report from NET and chain-of-custody documents are attached in Appendix A. Hydrocarbon constituents were again detected in groundwater samples from six of the 12 monitoring wells (MW-1,

<sup>1</sup> For RESNA's groundwater sampling protocol refer to Appendix A in "November Quarterly Groundwater Sampling and Analysis for Former Shell Station, 7194 Amador Valley Boulevard, Dublin, California, December 20, 1991."

MW-2, MW-3, MW-4, MW-6, and MW-13). The highest concentrations of benzene and TPHG occurred in MW-13 at 0.32 and 0.68 parts per million, respectively.

### **Discussion**

A groundwater elevation contour map, Figure 2, was generated from measurements obtained during the November 1991 sampling. The groundwater below the site flows generally to the east at an apparent gradient of 0.0022. A joint measurement of groundwater levels in monitoring wells at the subject site, the adjacent Unocal, and former Mobil stations was organized by Kaprelian Engineers, the consultant for Unocal. The Unocal station is located north of the subject site on the northwest corner of Amador Valley Boulevard and Village Parkway. The former Mobil Station, represented by Alton Geoscience, is east of the site on the southeast corner of Amador Valley Boulevard and Village Parkway. Water levels for all three sites were measured on November 13, 1991 and well elevation and location data were exchanged between the three parties. Groundwater elevation contour maps generated for the sites indicate the flow direction for the area is generally towards the east. Gradient below the Unocal station is approximately 0.0064, and 0.0048 below the former Mobil site. Groundwater elevation data for the Unocal and Mobil sites are summarized in Table 3, and groundwater contour maps are included as figures 3 and 4.

The benzene concentration map (Figure 5) shows that the highest concentration of benzene continues to occur in the vicinity of MW-13. Figures 6 through 12 are graphs representing groundwater analyses data for monitoring wells MW-1 through MW-6 and MW-13. The graphs display data collected from January 1990 to the present. Hydrocarbon constituent levels have remained relatively constant when compared to last quarter's results, although an increase in the benzene level was noted in MW-2 and MW-3. The wells reported as containing xylenes only during the last quarter (MW-5, MW-11, and MW-12) contain no detectable hydrocarbon constituents this quarter. As xylenes are commonly used as laboratory cleaning agents, the occurrence of xylenes last quarter in the aforementioned wells may be due to residual xylene in the testing equipment. The next quarterly sampling should occur in February 1992.

### **Reporting Requirements**

A copy of this report will be forwarded to the following agencies:

Zone 7-Alameda County Flood Control and  
Water Conservation District  
5997 Parkside Drive  
Pleasanton, California 94566  
Attention: Mr. Craig Mayfield, Water Resources Engineer

California Regional Water Quality Control Board  
San Francisco Bay Region  
2101 Webster Street, Suite 500  
Oakland, California 94612-3429  
Attention: Mr. Donald Dalke

Alameda County Health Care Services  
Department of Environmental Health  
Hazardous Materials Division  
80 Swan Way, Suite 200  
Oakland, California 94621  
Attention: Mr. Gil Wistar, Hazardous Materials Specialist

## Disclaimer

This report has been prepared solely for the use of Shell and any reliance on this report by third parties shall be as such party's sole risk.

## Limitations

The discussion and recommendations presented in this report are based on the following:

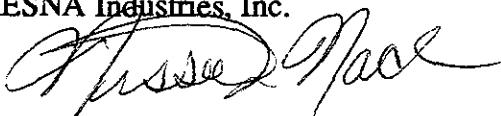

1. Observations by field personnel.
2. Results of laboratory analyses performed by a state-certified laboratory.
3. Our understanding of the regulations of the State of California, Alameda County, and the City of Dublin.

It is possible that variations in the soil or groundwater conditions could exist beyond the points explored in this investigation. Also, changes in the groundwater conditions could occur at some time in the future because of variations in rainfall, temperature, regional water usage, or other factors.

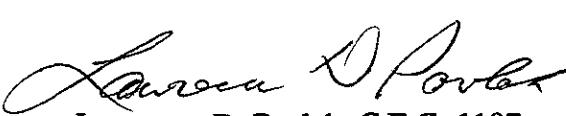

The service performed by RESNA has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the Dublin area. Please note that contamination of soil and groundwater must be reported to the appropriate agencies in a timely manner. No other warranty, expressed or implied, is made.

RESNA includes in this report chemical analytical data from a state-certified laboratory. The analytical tests are performed according to procedures suggested by the U.S. EPA and State of California. RESNA is not responsible for laboratory errors in procedure or result reporting.

Sincerely,  
RESNA Industries, Inc.

KEY TO ABBREVIATIONS and METHOD REFERENCES

- < : Less than; When appearing in results column indicates analyte not detected at the value following. This datum supersedes the listed Reporting Limit.
- \* : Reporting Limits are a function of the dilution factor for any given sample. To obtain the actual reporting limits for this sample, multiply the stated Reporting Limits by the dilution factor (but do not multiply reported values).
- ICVS : Initial Calibration Verification Standard (External Standard).
- mean : Average; sum of measurements divided by number of measurements.
- mg/Kg (ppm) : Concentration in units of milligrams of analyte per kilogram of sample (parts per million).
- mg/L : Concentration in units of milligrams of analyte per liter of sample.
- mL/L/hr : Milliliters per liter per hour.
- MPN/100 mL : Most probable number of bacteria per one hundred milliliters of sample.
- N/A : Not applicable.
- NA : Not analyzed.
- ND : Not detected; the analyte concentration is less than applicable listed reporting limit.
- NTU : Nephelometric turbidity units.
- RPD : Relative percent difference,  $100 \frac{[Value\ 1 - Value\ 2]}{mean\ value}$ .
- SNA : Standard not available.
- ug/Kg (ppb) : Concentration in units of micrograms of analyte per kilogram of sample (parts per billion).
- ug/L : Concentration in units of micrograms of analyte per liter of sample.
- umhos/cm : Micromhos per centimeter.
